Test Hyperref Metadata

A.. Author

June 24, 2013

1 Intentionally Left Blank

Nothing left to say, really.

2 URL's

Hyperref loads url, but redefines it

Special characters still neutralized: `http://example.com/foo_bar`, `http://example.com/foo#bar`, `http://example.com/foo&bar`.

But macros expanded: `http://localhost/dir/index.html`.

And, you get this: `http://example.com/~{}user`
