`template<typename _It> struct __gnu_parallel::__accumulate_selector<_It>`

[std::accumulate\(\)](#) selector.

Definition at line 208 of file `for_each_selectors.h`.

5.92.2 Member Function Documentation

5.92.2.1 `template<typename _It> template<typename _Op> std::iterator_traits<_It>::value_type __gnu_parallel::__accumulate_selector<_It>::operator() (_Op __o, _It __i) [inline]`

Functor execution.

5.93 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference 1105

Parameters

- `__o` Operator (unused).
- `__i` iterator referencing object.

Returns

The current value.

Definition at line 216 of file `for_each_selectors.h`.

5.92.3 Member Data Documentation

5.92.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator` [inherited]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.93 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference

Selector that returns the difference between two adjacent `__elements`.

Inheritance diagram for `__gnu_parallel::__adjacent_difference_selector<_It>`:

Public Member Functions

- `template<typename _Op>`
`bool operator() (_Op &__o, _It __i)`

Public Attributes

- `_It` [`_M_finish_iterator`](#)

5.93.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__adjacent_difference_selector<_It>`

Selector that returns the difference between two adjacent `__elements`.

Definition at line 269 of file `for_each_selectors.h`.

5.93.2 Member Data Documentation

5.93.2.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator`
[inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

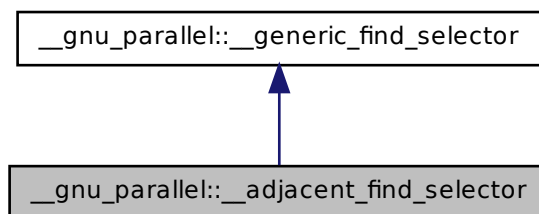

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.94 `__gnu_parallel::__adjacent_find_selector` Struct Reference

Test predicate on two adjacent elements.

Inheritance diagram for `__gnu_parallel::__adjacent_find_selector`:

Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`
`std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __-`
`begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

5.94.1 Detailed Description

Test predicate on two adjacent elements.

Definition at line 80 of file `find_selectors.h`.

5.94.2 Member Function Documentation

5.94.2.1 `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__adjacent_find_selector::M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

Parameters

`__begin1` Begin iterator of first sequence.
`__end1` End iterator of first sequence.
`__begin2` Begin iterator of second sequence.
`__pred` Find predicate.

Definition at line 105 of file `find_selectors.h`.

References `std::make_pair()`.

5.94.2.2 `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool __gnu_parallel::__adjacent_find_selector::operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]`

Test on one position.

Parameters

`__i1` Iterator on first sequence.
`__i2` Iterator on second sequence (unused).
`__pred` Find predicate.

Definition at line 90 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

5.110 __gnu_parallel::__mismatch_selector Struct Reference

Test inverted predicate on a single element.

Inheritance diagram for __gnu_parallel::__mismatch_selector:

Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`
`std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __-`
`begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

5.110.1 Detailed Description

Test inverted predicate on a single element.

Definition at line 119 of file `find_selectors.h`.

5.110.2 Member Function Documentation

5.110.2.1 `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__mismatch_selector::M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

Parameters

`__begin1` Begin iterator of first sequence.
`__end1` End iterator of first sequence.
`__begin2` Begin iterator of second sequence.
`__pred` Find predicate.

Definition at line 143 of file `find_selectors.h`.

5.110.2.2 `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool __gnu_parallel::__mismatch_selector::operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]`

Test on one position.

Parameters

`__i1` Iterator on first sequence.
`__i2` Iterator on second sequence (unused).
`__pred` Find predicate.

Definition at line 130 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find_selectors.h](#)

5.111 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference

Switch for 3-way merging with `__sentinels` turned off.

5.112 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference` 1135

Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

5.111.1 Detailed Description

`template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 3-way merging with `__sentinels` turned off. Note that 3-way merging is always stable!

Definition at line 748 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway_merge.h](#)

5.112 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference`

Switch for 3-way merging with `__sentinels` turned on.

Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

5.112.1 Detailed Description

`template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`

Switch for 3-way merging with `__sentinels` turned on. Note that 3-way merging is always stable!

Definition at line 768 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- [multiway_merge.h](#)

5.113 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct` Template Reference

Switch for 4-way merging with `__sentinels` turned off.

Public Member Functions

- `_RAIter3 operator() (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

5.113.1 Detailed Description

```
template<bool __sentinels, typename _RAIterIterator, typename _RAIter3,
typename _DifferenceTp, typename _Compare> struct __gnu_parallel::__
multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _
RAIter3, _DifferenceTp, _Compare >
```

Switch for 4-way merging with `__sentinels` turned off. Note that 4-way merging is always stable!

5.117 `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>` Struct Template Reference

`std::replace()` selector.

Inheritance diagram for `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp>`:

Public Member Functions

- `__replace_if_selector` (`const _Tp &__new_val`)
- `bool operator()` (`_Op &__o, _It __i`)

Public Attributes

- `const _Tp & __new_val`
- `_It _M_finish_iterator`

5.117.1 Detailed Description

```
template<typename _It, typename _Op, typename _Tp> struct __gnu_parallel::__replace_if_selector<_It, _Op, _Tp>
```

`std::replace()` selector.

Definition at line 156 of file `for_each_selectors.h`.

5.117.2 Constructor & Destructor Documentation

5.117.2.1 `template<typename _It , typename _Op , typename _Tp
> __gnu_parallel::__replace_if_selector< _It, _Op, _Tp
>::__replace_if_selector(const _Tp & __new_val) [inline,
explicit]`

Constructor.

Parameters

`__new_val` Value to replace with.

Definition at line 164 of file `for_each_selectors.h`.

5.117.3 Member Function Documentation

5.117.3.1 `template<typename _It , typename _Op , typename _Tp > bool
__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::operator() (
_Op & __o, _It __i) [inline]`

Functor execution.

Parameters

`__o` Operator.

`__i` iterator referencing object.

Definition at line 170 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::__new_val`.

5.117.4 Member Data Documentation

5.117.4.1 `template<typename _It , typename _Op , typename _Tp > const
_Tp& __gnu_parallel::__replace_if_selector< _It, _Op, _Tp
>::__new_val`

Value to replace with.

Definition at line 159 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::operator()()`.

5.118 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

5.117.4.2 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator`
[`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.118 `__gnu_parallel::__replace_selector<_It, _Tp>` Struct Template Reference

`std::replace()` selector.

Inheritance diagram for `__gnu_parallel::__replace_selector<_It, _Tp>`:

Public Member Functions

- [__replace_selector](#) (const `_Tp` & [__new_val](#))
- bool [operator\(\)](#) (`_Tp` & `__v`, `_It` `__i`)

Public Attributes

- const `_Tp` & [__new_val](#)
- `_It` [_M_finish_iterator](#)

5.118.1 Detailed Description

```
template<typename _It, typename _Tp> struct __gnu_parallel::__replace_
selector< _It, _Tp >
```

std::replace() selector.

Definition at line 132 of file for_each_selectors.h.

5.118.2 Constructor & Destructor Documentation

5.118.2.1 `template<typename _It, typename _Tp > __gnu_parallel::__replace_selector< _It, _Tp >::__replace_selector (const _Tp & __new_val) [inline, explicit]`

Constructor.

Parameters

`__new_val` Value to replace with.

Definition at line 140 of file for_each_selectors.h.

5.118.3 Member Function Documentation

5.118.3.1 `template<typename _It, typename _Tp > bool __gnu_parallel::__replace_selector< _It, _Tp >::operator() (_Tp & __v, _It __i) [inline]`

Functor execution.

Parameters

`__v` Current value.

`__i` iterator referencing object.

Definition at line 146 of file for_each_selectors.h.

References `__gnu_parallel::__replace_selector< _It, _Tp >::__new_val`.

5.118.4 Member Data Documentation

5.118.4.1 `template<typename _It, typename _Tp > const _Tp& __gnu_parallel::__replace_selector< _It, _Tp >::__new_val`

Value to replace with.

5.119 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

Definition at line 135 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_selector<_It, _Tp>::operator()`.

5.118.4.2 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::M_finish_iterator` [`inherited`]

`_Iterator` on last element processed; needed for some algorithms (e.g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.119 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

`std::transform()` `__selector`, one input sequence variant.

Inheritance diagram for `__gnu_parallel::__transform1_selector<_It>`:

Public Member Functions

- `template<typename _Op>`
`bool operator() (_Op &__o, _It __i)`

Public Attributes

- [_It _M_finish_iterator](#)

5.119.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform1_selector< _It >`

`std::transform()` __selector, one input sequence variant.

Definition at line 100 of file `for_each_selectors.h`.

5.119.2 Member Function Documentation

5.119.2.1 `template<typename _It> template<typename _Op > bool
__gnu_parallel::__transform1_selector< _It >::operator() (_Op &
__o, _It __i) [inline]`

Functor execution.

Parameters

__o Operator.

__i iterator referencing object.

Definition at line 107 of file `for_each_selectors.h`.

5.119.3 Member Data Documentation

5.119.3.1 `template<typename _It > _It __gnu_parallel::__
generic_for_each_selector< _It >::__M_finish_iterator
[inherited]`

__Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.120 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

`std::transform()` `__selector`, two input sequences variant.

Inheritance diagram for `__gnu_parallel::__transform2_selector<_It>`:

Public Member Functions

- `template<typename _Op>`
`bool operator() (_Op &__o, _It __i)`

Public Attributes

- `_It _M_finish_iterator`

5.120.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform2_selector<_It>`

`std::transform()` `__selector`, two input sequences variant.

Definition at line 116 of file `for_each_selectors.h`.

5.120.2 Member Function Documentation

5.120.2.1 `template<typename _It> template<typename _Op > bool
__gnu_parallel::__transform2_selector<_It >::operator() (_Op &
__o, _It __i) [inline]`

Functor execution.

Parameters

`__o` Operator.

`__i` iterator referencing object.

Definition at line 123 of file `for_each_selectors.h`.

5.120.3 Member Data Documentation

5.120.3.1 `template<typename _It > _It __gnu_parallel::__
generic_for_each_selector<_It >::__M_finish_iterator
[inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

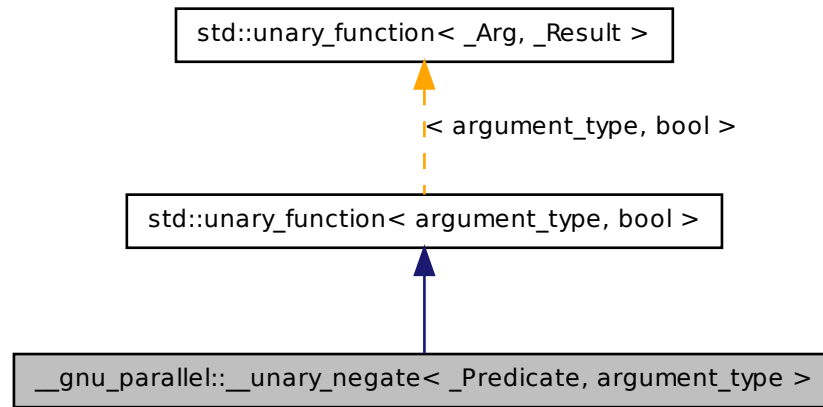

- [for_each_selectors.h](#)

5.121 `__gnu_parallel::__unary_negate< _Predicate, argument_type >` Class Template Reference

Similar to [std::unary_negate](#), but giving the argument types explicitly.

Inheritance diagram for `__gnu_parallel::__unary_negate< _Predicate, argument_type`

>:

Public Types

- typedef `argument_type` `argument_type`
- typedef `bool` `result_type`

Public Member Functions

- `__unary_negate` (`const _Predicate &__x`)
- `bool operator()` (`const argument_type &__x`)

Protected Attributes

- `_Predicate _M_pred`

5.121.1 Detailed Description

`template<typename _Predicate, typename argument_type> class __gnu_parallel::__unary_negate<_Predicate, argument_type>`

Similar to `std::unary_negate`, but giving the argument types explicitly.

Definition at line 173 of file parallel/base.h.

5.121.2 Member Typedef Documentation

5.121.2.1 `typedef argument_type std::unary_function< argument_type , bool >::argument_type [inherited]`

`argument_type` is the type of the /// argument (no surprises here)

Definition at line 102 of file stl_function.h.

5.121.2.2 `typedef bool std::unary_function< argument_type , bool >::result_type [inherited]`

`result_type` is the return type

Definition at line 105 of file stl_function.h.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.122 `__gnu_parallel::__DRandomShufflingGlobalData< _RAIter >` Struct Template Reference

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Public Types

- `typedef _TraitsType::difference_type _DifferenceType`
- `typedef std::iterator_traits< _RAIter > _TraitsType`
- `typedef _TraitsType::value_type _ValueType`

Public Member Functions

- `_DRandomShufflingGlobalData (_RAIter &__source)`

Public Attributes

- `_ThreadIndex * _M_bin_proc`

5.122 `__gnu_parallel::_DRandomShufflingGlobalData<_RAIter>` Struct Template Reference 1149

- `_DifferenceType** _M_dist`
- `int _M_num_bins`
- `int _M_num_bits`
- `_RAIter & _M_source`
- `_DifferenceType* _M_starts`
- `_ValueType** _M_temporaries`

5.122.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>`

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 52 of file `random_shuffle.h`.

5.122.2 Constructor & Destructor Documentation

5.122.2.1 `template<typename _RAIter> __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__DRandomShufflingGlobalData (_RAIter & __source)`
[`inline`]

Constructor.

Definition at line 83 of file `random_shuffle.h`.

5.122.3 Member Data Documentation

5.122.3.1 `template<typename _RAIter> _ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::__M_bin_proc`

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

5.122.3.2 `template<typename _RAIter> _DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist`

Two-dimensional array to hold the thread-bin distribution.

Dimensions (`_M_num_threads + 1`) `__x` (`_M_num_bins + 1`).

Definition at line 67 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.122.3.3 `template<typename _RAIter> int __gnu_ parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins`

Number of bins to distribute to.

Definition at line 77 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.122.3.4 `template<typename _RAIter> int __gnu_ parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits`

Number of bits needed to address the bins.

Definition at line 80 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.122.3.5 `template<typename _RAIter> _RAIter& __gnu_ parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source`

Begin iterator of the `__source`.

Definition at line 59 of file `random_shuffle.h`.

5.123 `__gnu_parallel::__DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference 1151

5.122.3.6 `template<typename _RAIter> _DifferenceType*
__gnu_parallel::__DRandomShufflingGlobalData<_RAIter
>::__M_starts`

Start indexes of the threads' `__chunks`.

Definition at line 70 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.122.3.7 `template<typename _RAIter> _ValueType**
__gnu_parallel::__DRandomShufflingGlobalData<_RAIter
>::__M_temporaries`

Temporary arrays for each thread.

Definition at line 62 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

The documentation for this struct was generated from the following file:

- [random_shuffle.h](#)

5.123 `__gnu_parallel::__DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference

Local data for a thread participating in [__gnu_parallel::__parallel_random_shuffle\(\)](#).

Public Attributes

- [_BinIndex __bins_end](#)
- [_BinIndex _M_bins_begin](#)
- [int _M_num_threads](#)
- [_DRandomShufflingGlobalData<_RAIter> * _M_sd](#)
- [uint32_t _M_seed](#)

5.123.1 Detailed Description

template<typename _RAIter, typename _RandomNumberGenerator> struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >

Local data for a thread participating in [__gnu_parallel::__parallel_random_shuffle\(\)](#).

Definition at line 91 of file random_shuffle.h.

5.123.2 Member Data Documentation

5.123.2.1 template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end

End index for bins taken care of by this thread.

Definition at line 100 of file random_shuffle.h.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#).

5.123.2.2 template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__M_bins_begin

Begin index for bins taken care of by this thread.

Definition at line 97 of file random_shuffle.h.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#).

5.123.2.3 template<typename _RAIter, typename _RandomNumberGenerator> int __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__M_num_threads

Number of threads participating in total.

Definition at line 94 of file random_shuffle.h.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

5.123.2.4 `template<typename _RAIter, typename
_RandomNumberGenerator> _DRandomShufflingGlobalData<_
_RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter,
_RandomNumberGenerator >::_M_sd`

Pointer to global data.

Definition at line 106 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.123.2.5 `template<typename _RAIter, typename
_RandomNumberGenerator> uint32_t __gnu_parallel::_
DRSSorterPU< _RAIter, _RandomNumberGenerator
>::_M_seed`

Random `_M_seed` for this thread.

Definition at line 103 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

The documentation for this struct was generated from the following file:

- [random_shuffle.h](#)

5.124 `__gnu_parallel::_DummyReduct` Struct Reference

Reduction function doing nothing.

Public Member Functions

- `bool operator() (bool, bool) const`

5.124.1 Detailed Description

Reduction function doing nothing.

Definition at line 298 of file `for_each_selectors.h`.

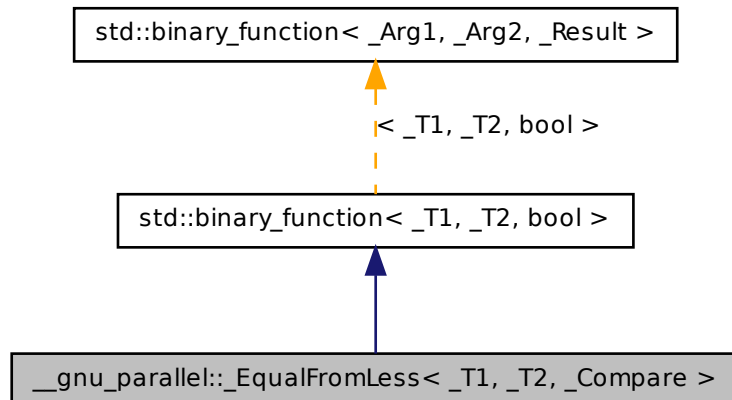

The documentation for this struct was generated from the following file:

- [for_each_selectors.h](#)

5.125 `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >` Class Template Reference

Constructs predicate for equality from strict weak ordering predicate.

Inheritance diagram for `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >`:

Public Types

- typedef `_T1` [first_argument_type](#)
- typedef `bool` [result_type](#)
- typedef `_T2` [second_argument_type](#)

Public Member Functions

- `_EqualFromLess` (`_Compare &__comp`)
- `bool operator()` (`const _T1 &__a, const _T2 &__b`)

5.125.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare> class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >
```

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file `parallel/base.h`.

5.125.2 Member Typedef Documentation

5.125.2.1 `typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

the type of the first argument /// (no surprises here)

Definition at line 114 of file `stl_function.h`.

5.125.2.2 `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]`

type of the return type

Definition at line 118 of file `stl_function.h`.

5.125.2.3 `typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]`

the type of the second argument

Definition at line 117 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.126 `__gnu_parallel::_EqualTo< _T1, _T2 >` Struct Template Reference

Similar to `std::equal_to`, but allows two different types.

Inheritance diagram for `__gnu_parallel::_EqualTo<_T1, _T2>`:

Public Types

- `typedef _T1` [first_argument_type](#)
- `typedef bool` [result_type](#)
- `typedef _T2` [second_argument_type](#)

Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`

5.126.1 Detailed Description

```
template<typename _T1, typename _T2> struct __gnu_parallel::_EqualTo< _-
_T1, _T2 >
```

Similar to [std::equal_to](#), but allows two different types.

Definition at line 244 of file `parallel/base.h`.

- `bool operator<= (_GuardedIterator< _RAIter, _Compare > &__bi1, _GuardedIterator< _RAIter, _Compare > &__bi2)`

5.127.1 Detailed Description

`template<typename _RAIter, typename _Compare> class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >`

_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons. The implicit supremum comes with a performance cost.

Deriving from _RAIter is not possible since _RAIter need not be a class.

Definition at line 66 of file multiway_merge.h.

5.127.2 Constructor & Destructor Documentation

5.127.2.1 `template<typename _RAIter, typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator (_RAIter __begin, _RAIter __end, _Compare & __comp) [inline]`

Constructor. Sets iterator to beginning of sequence.

Parameters

- `__begin` Begin iterator of sequence.
- `__end` End iterator of sequence.
- `__comp` Comparator provided for associated overloaded compare operators.

Definition at line 84 of file multiway_merge.h.

5.127.3 Member Function Documentation

5.127.3.1 `template<typename _RAIter, typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter () [inline]`

Convert to wrapped iterator.

5.127 `__gnu_parallel::_GuardedIterator<_RAIter, _Compare>` Class Template Reference 1159

Returns

Wrapped iterator.

Definition at line 105 of file `multiway_merge.h`.

```
5.127.3.2  template<typename _RAIter , typename _Compare
            > std::iterator_traits<_RAIter>::value_type&
            __gnu_parallel::_GuardedIterator< _RAIter, _Compare
            >::operator*( ) [inline]
```

Dereference operator.

Returns

Referenced element.

Definition at line 100 of file `multiway_merge.h`.

```
5.127.3.3  template<typename _RAIter , typename _Compare
            > _GuardedIterator<_RAIter, _Compare>&
            __gnu_parallel::_GuardedIterator< _RAIter, _Compare
            >::operator++( ) [inline]
```

Pre-increment operator.

Returns

This.

Definition at line 91 of file `multiway_merge.h`.

5.127.4 Friends And Related Function Documentation

```
5.127.4.1  template<typename _RAIter , typename _Compare > bool
            operator< ( _GuardedIterator< _RAIter, _Compare > & __bi1,
            _GuardedIterator< _RAIter, _Compare > & __bi2 ) [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

`__bi1` First iterator.

`__bi2` Second iterator.

Returns

`true` if less.

Definition at line 113 of file `multiway_merge.h`.

5.127.4.2 `template<typename _RAIter, typename _Compare> bool
operator<= (_GuardedIterator< _RAIter, _Compare> & __bi1,
_GuardedIterator< _RAIter, _Compare> & __bi2) [friend]`

Compare two elements referenced by guarded iterators.

Parameters

`__bi1` First iterator.

`__bi2` Second iterator.

Returns

`True` if less equal.

Definition at line 128 of file `multiway_merge.h`.

5.135.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTree< false, _Tp, _Compare >`

Unstable [_LoserTree](#) variant. Stability (non-stable here) is selected with partial specialization.

Definition at line 255 of file losertree.h.

5.135.2 Member Function Documentation

5.135.2.1 `template<typename _Tp , typename _Compare > void
__gnu_parallel::_LoserTree< false, _Tp, _Compare
>::__delete_min_insert (_Tp __key, bool __sup) [inline]`

Delete the `_M_key` smallest element and insert the element `__key` instead.

Parameters

`__key` the `_M_key` to insert

`__sup` true iff `__key` is an explicitly marked supremum

Definition at line 317 of file losertree.h.

References `std::swap()`.

5.135.2.2 `template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::__get_min_source () [inline, inherited]`

Returns

the index of the sequence with the smallest element.

5.135 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference 1177

Definition at line 151 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

5.135.2.3 `template<typename _Tp, typename _Compare > unsigned int
__gnu_parallel::_LoserTree< false, _Tp, _Compare >::_init_winner
(unsigned int __root) [inline]`

Computes the winner of the competition at position "`__root`".

Called recursively (starting at 0) to build the initial tree.

Parameters

`__root` __index of the "game" to start.

Definition at line 277 of file losertree.h.

5.135.2.4 `template<typename _Tp, typename _Compare > void
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start
(const _Tp & __key, int __source, bool __sup) [inline,
inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

Parameters

`__key` the element to insert

`__source` __index of the __source __sequence

`__sup` flag that determines whether the value to insert is an explicit __supremum.

- unsigned int [_M_k](#)
- unsigned int [_M_log_k](#)
- [_Loser](#) * [_M_losers](#)
- unsigned int [_M_offset](#)

5.136.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >
```

Guarded loser/tournament tree. The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine. This is a well-performing variant.

Parameters

`_Tp` the element type

`_Compare` the comparator to use, defaults to `std::less<_Tp>`

Definition at line 55 of file `losertree.h`.

5.136.2 Constructor & Destructor Documentation

```
5.136.2.1 template<typename _Tp , typename _Compare >
           __gnu_parallel::_LoserTreeBase< _Tp, _Compare
           >::_LoserTreeBase ( unsigned int __k, _Compare __comp )
           [inline]
```

The constructor.

Parameters

`__k` The number of sequences to merge.

`__comp` The comparator to use.

Definition at line 94 of file `losertree.h`.

References `__gnu_parallel::_rd_log2()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

```
5.136.2.2 template<typename _Tp , typename _Compare >
           __gnu_parallel::_LoserTreeBase< _Tp, _Compare
           >::~~_LoserTreeBase ( ) [inline]
```

The destructor.

Definition at line 118 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

5.136.3 Member Function Documentation

5.136.3.1 `template<typename _Tp, typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::__get_min_source() [inline]`

Returns

the index of the sequence with the smallest element.

Definition at line 151 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_source`.

5.136.3.2 `template<typename _Tp, typename _Compare > void
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start
(const _Tp & __key, int __source, bool __sup) [inline]`

Initializes the sequence "`_M_source`" with the element "`__key`".

Parameters

`__key` the element to insert

`__source` index of the `__source` sequence

`__sup` flag that determines whether the value to insert is an explicit `__supremum`.

Definition at line 130 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_sup`.

5.136.4 Member Data Documentation

5.136.4.1 `template<typename _Tp, typename _Compare > _Compare
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_comp
[protected]`

`_Compare` to use.

Definition at line 78 of file `losertree.h`.

5.136.4.2 `template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::_M_first_insert [protected]`

State flag that determines whether the [_LoserTree](#) is empty.

Only used for building the [_LoserTree](#).

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

5.136.4.3 `template<typename _Tp , typename _Compare > unsigned int
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k
[protected]`

`log_2{_M_k}`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

5.136.4.4 `template<typename _Tp , typename _Compare > _Loser*
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers
[protected]`

[_LoserTree](#) __elements.

Definition at line 75 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase()`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

5.137 `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser` Struct Reference

Internal representation of a [_LoserTree](#) element.

Public Attributes

- [_Tp _M_key](#)
- [int _M_source](#)
- [bool _M_sup](#)

5.137.1 Detailed Description

`template<typename _Tp, typename _Compare> struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser`

Internal representation of a [_LoserTree](#) element.

Definition at line 59 of file `losertree.h`.

5.137.2 Member Data Documentation

5.137.2.1 `template<typename _Tp, typename _Compare >
_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::_Loser::_M_key`

`_M_key` of the element in the [_LoserTree](#).

Definition at line 66 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start()`.

5.137.2.2 `template<typename _Tp, typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::_Loser::_M_source`

`__index` of the `__source` `__sequence`.

Definition at line 64 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start()`.

5.137.2.3 `template<typename _Tp, typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare
>::_Loser::_M_sup`

flag, true iff this is a "maximum" `__sentinel`.

Definition at line 62 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start()`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

5.138 `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >` Class Template Reference

Stable [LoserTree](#) implementation.

5.143.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >`

Unstable unguarded [_LoserTree](#) variant storing pointers. Stable variant is above.

5.144 `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >` Class Template Reference 1191

Definition at line 953 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

5.144 `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >` Class Template Reference

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >`:

Public Member Functions

- `_LoserTreePointerUnguardedBase` (unsigned int __k, const _Tp &__sentinel, _Compare __comp=`std::less< _Tp >()`)
- `int __get_min_source ()`
- `void __insert_start` (const _Tp &__key, int __source, bool)

Protected Attributes

- `_Compare _M_comp`
- `unsigned int _M_ik`
- `unsigned int _M_k`
- `_Loser * _M_losers`
- `unsigned int _M_offset`

5.144.1 Detailed Description

```
template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure. No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 805 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

5.145 __gnu_parallel::_LoserTreeTraits< _Tp > Struct Template Reference

Traits for determining whether the loser tree should use pointers or copies.

Static Public Attributes

- static const bool [_M_use_pointer](#)

5.145.1 Detailed Description

```
template<typename _Tp> struct __gnu_parallel::_LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies. The field "[_M_use_pointer](#)" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
```

```
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

5.146 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference 1193

Parameters

`_Tp` type to give the loser tree traits for.

Definition at line 727 of file `multiway_merge.h`.

5.145.2 Member Data Documentation

5.145.2.1 `template<typename _Tp > const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer` [static]

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

Definition at line 735 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway_merge.h](#)

5.146 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

Stable implementation of unguarded [_LoserTree](#).

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _`

Compare >:

Public Member Functions

5.153.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::PMWMSortingData<_RAIter>`

Data accessed by all threads. PMWMS = parallel multiway mergesort

Definition at line 61 of file `multiway_mergesort.h`.

5.153.2 Member Data Documentation

5.153.2.1 `template<typename _RAIter> _ThreadIndex
__gnu_parallel::PMWMSortingData<_RAIter>::
_M_num_threads`

Number of threads involved.

Definition at line 68 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.153.2.2 `template<typename _RAIter> _DifferenceType*
__gnu_parallel::PMWMSortingData<_RAIter>::
_M_offsets`

Offsets to add to the found positions.

Definition at line 83 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

5.153.2.3 `template<typename _RAIter> std::vector<_Piece<_
_DifferenceType>>> *_M_pieces`

Pieces of data to merge [thread][__sequence].

Definition at line 86 of file `multiway_mergesort.h`.

5.153 __gnu_parallel::PMWMSSortingData<_RAIter> Struct Template Reference 1205

Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

5.153.2.4 template<typename _RAIter> _ValueType* __gnu_parallel::PMWMSSortingData<_RAIter>::_M_samples

Samples.

Definition at line 80 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), and __gnu_parallel::parallel_sort_mwms().

5.153.2.5 template<typename _RAIter> _RAIter __gnu_parallel::PMWMSSortingData<_RAIter>::_M_source

Input __begin.

Definition at line 71 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

5.153.2.6 template<typename _RAIter> _DifferenceType* __gnu_parallel::PMWMSSortingData<_RAIter>::_M_starts

Start indices, per thread.

Definition at line 74 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

5.153.2.7 template<typename _RAIter> _ValueType** __gnu_parallel::PMWMSSortingData<_RAIter>::_M_temporary

Storage in which to sort.

Definition at line 77 of file multiway_mergesort.h.

Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

The documentation for this struct was generated from the following file:

5.154 `__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >` Class Template Reference

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Public Types

- `typedef _DifferenceTp _DifferenceType`
- `typedef _PseudoSequenceIterator< _Tp, uint64_t > iterator`

Public Member Functions

- `_PseudoSequence (const _Tp &__val, _DifferenceType __count)`
- `iterator begin () const`
- `iterator end () const`

5.154.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Parameters

- `_Tp` Sequence `_M` value type.
- `_DifferenceTp` Sequence difference type.

Definition at line 359 of file `parallel/base.h`.

5.154.2 Constructor & Destructor Documentation

```
5.154.2.1 template<typename _Tp, typename _DifferenceTp>
        __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp
        >::_PseudoSequence ( const _Tp & __val, _DifferenceType __count
        ) [inline]
```

Constructor.

5.155 `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >` Class Template Reference 1207

Parameters

- `_M_val` Element of the sequence.
- `__count` Number of (virtual) copies.

Definition at line 371 of file `parallel/base.h`.

5.154.3 Member Function Documentation

5.154.3.1 `template<typename _Tp, typename _DifferenceTp> iterator
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin () const [inline]`

Begin iterator.

Definition at line 376 of file `parallel/base.h`.

5.154.3.2 `template<typename _Tp, typename _DifferenceTp> iterator
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end () const [inline]`

End iterator.

Definition at line 381 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.155 `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >` Class Template Reference

`_Iterator` associated with [__gnu_parallel::_PseudoSequence](#). If features the usual random-access iterator functionality.

Public Types

- `typedef _DifferenceTp _DifferenceType`

Public Member Functions

- `_PseudoSequenceIterator` (`const _Tp &__val, _DifferenceType __pos`)

- `bool operator!= (const _PseudoSequenceIterator &__i2)`
- `const _Tp & operator* () const`
- `_PseudoSequenceIterator & operator++ ()`
- `_PseudoSequenceIterator operator++ (int)`
- `_DifferenceType operator- (const _PseudoSequenceIterator &__i2)`
- `bool operator== (const _PseudoSequenceIterator &__i2)`
- `const _Tp & operator[] (_DifferenceType) const`

5.155.1 Detailed Description

`template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >`

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. If features the usual random-access iterator functionality.

Parameters

- `_Tp` Sequence `_M_value` type.
- `_DifferenceTp` Sequence difference type.

Definition at line 306 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.156 `__gnu_parallel::_QSBThreadLocal`< `_RAIter` > Struct Template Reference

Information local to one thread in the parallel quicksort run.

Public Types

- `typedef _TraitsType::difference_type _DifferenceType`
- `typedef std::pair< _RAIter, _RAIter > _Piece`
- `typedef std::iterator_traits< _RAIter > _TraitsType`

Public Member Functions

- `_QSBThreadLocal (int __queue_size)`

Public Attributes

- volatile _DifferenceType * [_M_elements_leftover](#)
- [_Piece _M_global](#)
- [_Piece _M_initial](#)
- [_RestrictedBoundedConcurrentQueue<_Piece> _M_leftover_parts](#)
- [_ThreadIndex _M_num_threads](#)

5.156.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::_QSBThreadLocal<_RAIter>`

Information local to one thread in the parallel quicksort run.

Definition at line 62 of file `balanced_quicksort.h`.

5.156.2 Member Typedef Documentation

5.156.2.1 `template<typename _RAIter> typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal<_RAIter>::_Piece`

Continuous part of the sequence, described by an iterator pair.

Definition at line 69 of file `balanced_quicksort.h`.

5.156.3 Constructor & Destructor Documentation

5.156.3.1 `template<typename _RAIter> __gnu_parallel::_QSBThreadLocal<_RAIter>::_QSBThreadLocal (int __queue_size) [inline]`

Constructor.

Parameters

`__queue_size` size of the work-stealing queue.

Definition at line 88 of file `balanced_quicksort.h`.

5.156.4 Member Data Documentation

5.156.4.1 `template<typename _RAIter> volatile _DifferenceType*
__gnu_parallel::__QSBThreadLocal< _RAIter
>::__M_elements_leftover`

Pointer to a counter of elements left over to sort.

Definition at line 81 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

5.156.4.2 `template<typename _RAIter> _Piece __gnu_parallel::__-
QSBThreadLocal< _RAIter >::__M_global`

The complete sequence to sort.

Definition at line 84 of file `balanced_quicksort.h`.

5.156.4.3 `template<typename _RAIter> _Piece __gnu_parallel::__-
QSBThreadLocal< _RAIter >::__M_initial`

Initial piece to work on.

Definition at line 72 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

5.156.4.4 `template<typename _RAIter> _-
RestrictedBoundedConcurrentQueue< _Piece>
__gnu_parallel::__QSBThreadLocal< _RAIter >::__M_leftover_parts`

Work-stealing queue.

Definition at line 75 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

5.156.4.5 `template<typename _RAIter> _ThreadIndex
__gnu_parallel::__QSBThreadLocal< _RAIter >::__M_num_threads`

Number of threads involved in this algorithm.

Definition at line 78 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

The documentation for this struct was generated from the following file:

5.157 `__gnu_parallel::_RandomNumber` Class Reference

Random number generator, based on the Mersenne twister.

Public Member Functions

- [_RandomNumber](#) ()
- [_RandomNumber](#) (uint32_t __seed, uint64_t _M_supremum=0x100000000ULL)
- unsigned long [__genrand_bits](#) (int __bits)
- uint32_t [operator\(\)](#) ()
- uint32_t [operator\(\)](#) (uint64_t local_supremum)

5.157.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file `random_number.h`.

5.157.2 Constructor & Destructor Documentation

5.157.2.1 `__gnu_parallel::_RandomNumber::_RandomNumber ()` [`inline`]

Default constructor. Seed with 0.

Definition at line 74 of file `random_number.h`.

5.157.2.2 `__gnu_parallel::_RandomNumber::_RandomNumber (uint32_t __seed, uint64_t _M_supremum = 0x100000000ULL)` [`inline`]

Constructor.

Parameters

__seed Random __seed.

_M_supremum Generate integer random numbers in the interval [0, *_M_supremum*).

Definition at line 85 of file random_number.h.

5.157.3 Member Function Documentation

5.157.3.1 `unsigned long __gnu_parallel::_RandomNumber::_genrand_bits (int __bits) [inline]`

Generate a number of random bits, run-time parameter.

Parameters

bits Number of bits to generate.

Definition at line 109 of file random_number.h.

5.157.3.2 `uint32_t __gnu_parallel::_RandomNumber::operator() () [inline]`

Generate unsigned random 32-bit integer.

Definition at line 94 of file random_number.h.

5.157.3.3 `uint32_t __gnu_parallel::_RandomNumber::operator() (uint64_t local_supremum) [inline]`

Generate unsigned random 32-bit integer in the interval [0, *local_supremum*).

Definition at line 100 of file random_number.h.

The documentation for this class was generated from the following file:

- [random_number.h](#)

5.158 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>` Class Template Reference

Double-ended queue of bounded size, allowing lock-free atomic access. [push_front\(\)](#) and [pop_front\(\)](#) must not be called concurrently to each other, while [pop_back\(\)](#) can be called concurrently at all times. [empty\(\)](#), [size\(\)](#), and [top\(\)](#) are intentionally not provided. Calling them would not make sense in a concurrent setting.

5.158 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>` Class Template Reference 1213

Inheritance diagram for `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>`:

Public Member Functions

- [`_RestrictedBoundedConcurrentQueue`](#) ([`_SequenceIndex`](#) __max_size)

- bool [`pop_front`](#) ([`_Tp`](#) &__t)
- void [`push_front`](#) (const [`_Tp`](#) &__t)

5.158.1 Detailed Description

template<typename `_Tp`> **class** **`__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>`**

Double-ended queue of bounded size, allowing lock-free atomic access. [`push_front\(\)`](#) and [`pop_front\(\)`](#) must not be called concurrently to each other, while [`pop_back\(\)`](#) can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Parameters

`_Tp` Contained element type.

Definition at line 52 of file `queue.h`.

5.158.2 Constructor & Destructor Documentation

5.158.2.1 `template<typename _Tp> __gnu_parallel::_-
RestrictedBoundedConcurrentQueue< _Tp
>::_RestrictedBoundedConcurrentQueue (_SequenceIndex
__max_size) [inline]`

Constructor. Not to be called concurrent, of course.

Parameters

__M_max_size Maximal number of elements to be contained.

Definition at line 68 of file queue.h.

5.158.2.2 `template<typename _Tp> __gnu_parallel::_-
RestrictedBoundedConcurrentQueue< _Tp
>::~~RestrictedBoundedConcurrentQueue () [inline]`

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file queue.h.

5.158.3 Member Function Documentation

5.158.3.1 `template<typename _Tp> bool __gnu_parallel::_-
RestrictedBoundedConcurrentQueue< _Tp >::pop_back (_Tp &
__t) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop_front\(\)](#).

Definition at line 127 of file queue.h.

5.158.3.2 `template<typename _Tp> bool __gnu_parallel::_-
RestrictedBoundedConcurrentQueue< _Tp >::pop_front (_Tp &
__t) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop_front\(\)](#).

Definition at line 100 of file queue.h.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

Minimal input size for count and count_if.

Definition at line 145 of file settings.h.

5.161.3.5 _SequenceIndex __gnu_parallel::_Settings::fill_minimal_n

Minimal input size for fill.

Definition at line 148 of file settings.h.

5.161.3.6 double __gnu_parallel::_Settings::find_increasing_factor

Block size increase factor for find.

Definition at line 151 of file settings.h.

5.161.3.7 _SequenceIndex __gnu_parallel::_Settings::find_initial_block_size

Initial block size for find.

Definition at line 154 of file settings.h.

Referenced by __gnu_parallel::__find_template().

5.161.3.8 _SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size

Maximal block size for find.

Definition at line 157 of file settings.h.

5.161.3.9 float __gnu_parallel::_Settings::find_scale_factor

Block size scale-down factor with respect to current position.

Definition at line 276 of file settings.h.

Referenced by __gnu_parallel::_find_template().

5.161.3.10 _SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size

Start with looking for this many elements sequentially, for find.

Definition at line 160 of file settings.h.

Referenced by __gnu_parallel::_find_template().

5.161.3.11 _SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n

Minimal input size for for_each.

Definition at line 163 of file settings.h.

5.161.3.12 _SequenceIndex __gnu_parallel::_Settings::generate_minimal_n

Minimal input size for generate.

Definition at line 166 of file settings.h.

5.161.3.13 unsigned long long __gnu_parallel::_Settings::L1_cache_size

size of the L1 cache in bytes (underestimation).

Definition at line 254 of file settings.h.

5.161.3.14 unsigned long long __gnu_parallel::_Settings::L2_cache_size

size of the L2 cache in bytes (underestimation).

Definition at line 257 of file settings.h.

Referenced by __gnu_parallel::_parallel_random_shuffle_drs(), and __gnu_parallel::_sequential_random_shuffle().

**5.161.3.15 _SequenceIndex __gnu_parallel::_Settings::max_element -
 minimal_n**

Minimal input size for max_element.

Definition at line 169 of file settings.h.

5.161.3.16 _SequenceIndex __gnu_parallel::_Settings::merge_minimal_n

Minimal input size for merge.

Definition at line 172 of file settings.h.

5.161.3.17 unsigned int __gnu_parallel::_Settings::merge_oversampling

Oversampling factor for merge.

Definition at line 175 of file settings.h.

Referenced by __gnu_parallel::multiway_merge_sampling_splitting(), and __gnu_parallel::parallel_multiway_merge().

**5.161.3.18 _SequenceIndex __gnu_parallel::_Settings::min_element_minimal -
 n**

Minimal input size for min_element.

Definition at line 178 of file settings.h.

5.161.3.19 int __gnu_parallel::_Settings::multiway_merge_minimal_k

Oversampling factor for multiway_merge.

Definition at line 184 of file settings.h.

**5.161.3.20 _SequenceIndex __gnu_parallel::_Settings::multiway_merge -
 minimal_n**

Minimal input size for multiway_merge.

Definition at line 181 of file settings.h.

5.161.3.21 unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling

Oversampling factor for multiway_merge.

Definition at line 187 of file settings.h.

5.161.3.22 _SequenceIndex __gnu_parallel::_Settings::nth_element_minimal_n

Minimal input size for nth_element.

Definition at line 190 of file settings.h.

Referenced by __gnu_parallel::_parallel_nth_element().

5.161.3.23 _SequenceIndex __gnu_parallel::_Settings::partial_sort_minimal_n

Minimal input size for partial_sort.

Definition at line 203 of file settings.h.

5.161.3.24 float __gnu_parallel::_Settings::partial_sum_dilation

Ratio for partial_sum. Assume "sum and write result" to be /// this factor slower than just "sum".

Definition at line 207 of file settings.h.

Referenced by __gnu_parallel::_parallel_partial_sum_linear().

5.161.3.25 unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n

Minimal input size for partial_sum.

Definition at line 210 of file settings.h.

5.161.3.26 double __gnu_parallel::_Settings::partition_chunk_share

Chunk size for partition, relative to input size. If > 0.0, /// this value overrides partition_chunk_size.

Definition at line 197 of file settings.h.

Referenced by __gnu_parallel::_parallel_partition().

5.161.3.27 _SequenceIndex __gnu_parallel::_Settings::partition_chunk_size

Chunk size for partition.

Definition at line 193 of file settings.h.

Referenced by __gnu_parallel::__parallel_partition().

5.161.3.28 _SequenceIndex __gnu_parallel::_Settings::partition_minimal_n

Minimal input size for partition.

Definition at line 200 of file settings.h.

Referenced by __gnu_parallel::__parallel_nth_element().

5.161.3.29 _SequenceIndex __gnu_parallel::_Settings::qsb_steals

The number of stolen ranges in load-balanced quicksort.

Definition at line 270 of file settings.h.

5.161.3.30 unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n

Minimal input size for random_shuffle.

Definition at line 213 of file settings.h.

5.161.3.31 _SequenceIndex __gnu_parallel::_Settings::replace_minimal_n

Minimal input size for replace and replace_if.

Definition at line 216 of file settings.h.

5.161.3.32 _SequenceIndex __gnu_parallel::_Settings::search_minimal_n

Minimal input size for search and search_n.

Definition at line 273 of file settings.h.

5.161.3.33 _SequenceIndex __gnu_parallel::_Settings::set_difference_minimal_n

Minimal input size for set_difference.

Definition at line 219 of file settings.h.

5.161.3.34 `_SequenceIndex __gnu_parallel::_Settings::set_intersection_minimal_n`

Minimal input size for `set_intersection`.

Definition at line 222 of file `settings.h`.

5.161.3.35 `_SequenceIndex __gnu_parallel::_Settings::set_symmetric_difference_minimal_n`

Minimal input size for `set_symmetric_difference`.

Definition at line 225 of file `settings.h`.

5.161.3.36 `_SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n`

Minimal input size for `set_union`.

Definition at line 228 of file `settings.h`.

5.161.3.37 `_SequenceIndex __gnu_parallel::_Settings::sort_minimal_n`

Minimal input size for parallel sorting.

Definition at line 231 of file `settings.h`.

5.161.3.38 `unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling`

Oversampling factor for parallel `std::sort` (MWMS).

Definition at line 234 of file `settings.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.161.3.39 `unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset`

Such many samples to take to find a good pivot (quicksort).

Definition at line 237 of file `settings.h`.

5.162 __gnu_parallel::SplitConsistently< __exact, _RAIter, _Compare, _SortingPlacesIterator > Struct Template Reference 1225

5.161.3.40 _SequenceIndex __gnu_parallel::Settings::sort_qsb_base_case_maximal_n

Maximal subsequence __length to switch to unbalanced __base case. /// Applies to std::sort with dynamically load-balanced quicksort.

Definition at line 241 of file settings.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

5.161.3.41 unsigned int __gnu_parallel::Settings::TLB_size

size of the Translation Lookaside Buffer (underestimation).

Definition at line 260 of file settings.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__sequential_random_shuffle().

5.161.3.42 _SequenceIndex __gnu_parallel::Settings::transform_minimal_n

Minimal input size for parallel std::transform.

Definition at line 244 of file settings.h.

5.161.3.43 _SequenceIndex __gnu_parallel::Settings::unique_copy_minimal_n

Minimal input size for unique_copy.

Definition at line 247 of file settings.h.

5.211 `__gnu_pbds::splay_tree_tag` Struct Reference

Splay tree.

Inheritance diagram for __gnu_pbds::splay_tree_tag:

5.211.1 Detailed Description

Splay tree.

Definition at line 124 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

5.212 __gnu_pbds::string_tag Struct Reference

Basic string container, inclusive of strings, ropes, etc.

Inheritance diagram for `__gnu_pbds::string_tag`:

5.212.1 Detailed Description

Basic string container, inclusive of strings, ropes, etc.

Definition at line 97 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

5.213 `__gnu_pbds::thin_heap_tag` Struct Reference

Thin heap.

Inheritance diagram for __gnu_pbds::thin_heap_tag:

5.213.1 Detailed Description

Thin heap.

Definition at line 154 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

5.214 __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator > Class Template Reference

A concrete basic tree-based associative container.

Inheritance diagram for __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator >:

Public Types

- typedef Allocator **allocator_type**
- typedef Cmp_Fn **cmp_fn**
- typedef base_type::const_iterator **const_iterator**
- typedef key_rebind::const_pointer **const_key_pointer**
- typedef key_rebind::const_reference **const_key_reference**
- typedef mapped_rebind::const_pointer **const_mapped_pointer**
- typedef mapped_rebind::const_reference **const_mapped_reference**
- typedef base_type::const_point_iterator **const_point_iterator**
- typedef value_rebind::const_pointer **const_pointer**
- typedef value_rebind::const_reference **const_reference**
- typedef Tag **container_category**
- typedef allocator_type::difference_type **difference_type**
- typedef base_type::iterator **iterator**
- typedef key_rebind::pointer **key_pointer**
- typedef allocator_type::template rebind< key_type >::other **key_rebind**
- typedef key_rebind::reference **key_reference**
- typedef allocator_type::template rebind< Key >::other::value_type **key_type**
- typedef mapped_rebind::pointer **mapped_pointer**
- typedef allocator_type::template rebind< mapped_type >::other **mapped_rebind**
- typedef mapped_rebind::reference **mapped_reference**
- typedef Mapped **mapped_type**
- typedef detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Tag, Allocator >::node_update **node_update**
- typedef base_type::point_iterator **point_iterator**
- typedef value_rebind::pointer **pointer**
- typedef value_rebind::reference **reference**
- typedef allocator_type::size_type **size_type**
- typedef allocator_type::template rebind< value_type >::other **value_rebind**
- typedef base_type::value_type **value_type**

Public Member Functions

- `void __resize (std::size_t __from, std::size_t)`
- `void __set_invalid ()`
- `void __set_list_cost (float __lc)`
- `void __set_vector_cost (float __vc)`
- `std::size_t __shift_count ()`
- `__stack_t __stack () const`
- `void __write (FILE *__f) const`

Protected Attributes

- `__stack_t _M_stack`

5.222.1 Detailed Description

A list-to-vector instrumentation line in the object table.

Definition at line 49 of file `profiler_list_to_vector.h`.

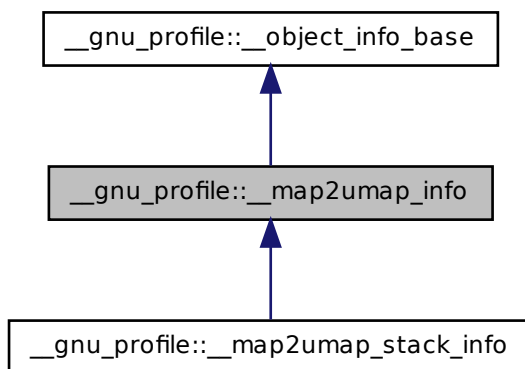

The documentation for this class was generated from the following file:

- [profiler_list_to_vector.h](#)

5.223 `__gnu_profile::__map2umap_info` Class Reference

A map-to-unordered_map instrumentation line in the object table.

Inheritance diagram for `__gnu_profile::__map2umap_info`:

Public Member Functions

- `__map2umap_info` (`__stack_t __stack`)
- `__map2umap_info` (`const __map2umap_info &__o`)
- `std::string __advice` () `const`
- `bool __is_valid` () `const`
- `float __magnitude` () `const`
- `void __merge` (`const __map2umap_info &__o`)
- `void __record_erase` (`std::size_t __size`, `std::size_t __count`)
- `void __record_find` (`std::size_t __size`)
- `void __record_insert` (`std::size_t __size`, `std::size_t __count`)
- `void __record_invalidate` ()
- `void __record_iterate` (`std::size_t __count`)
- `__stack_t __stack` () `const`
- `void __write` (`FILE *__f`) `const`

Protected Attributes

- `__stack_t _M_stack`

5.223.1 Detailed Description

A map-to-unordered_map instrumentation line in the object table.

Definition at line 73 of file profiler_map_to_unordered_map.h.

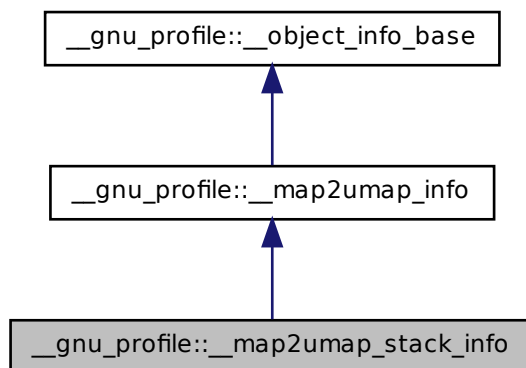

The documentation for this class was generated from the following file:

- [profiler_map_to_unordered_map.h](#)

5.224 __gnu_profile::__map2umap_stack_info Class Reference

A map-to-unordered_map instrumentation line in the stack table.

Inheritance diagram for __gnu_profile::__map2umap_stack_info:

Public Member Functions

- **__map2umap_stack_info** (const [__map2umap_info](#) &__o)
- [std::string](#) **__advice** () const
- bool **__is_valid** () const
- float **__magnitude** () const
- void **__merge** (const [__map2umap_info](#) &__o)

- void **__record_erase** (std::size_t __size, std::size_t __count)
- void **__record_find** (std::size_t __size)
- void **__record_insert** (std::size_t __size, std::size_t __count)
- void **__record_invalidate** ()
- void **__record_iterate** (std::size_t __count)
- __stack_t **__stack** () const
- void **__write** (FILE *__f) const

Protected Attributes

- __stack_t **_M_stack**

5.224.1 Detailed Description

A map-to-unordered_map instrumentation line in the stack table.

Definition at line 177 of file profiler_map_to_unordered_map.h.

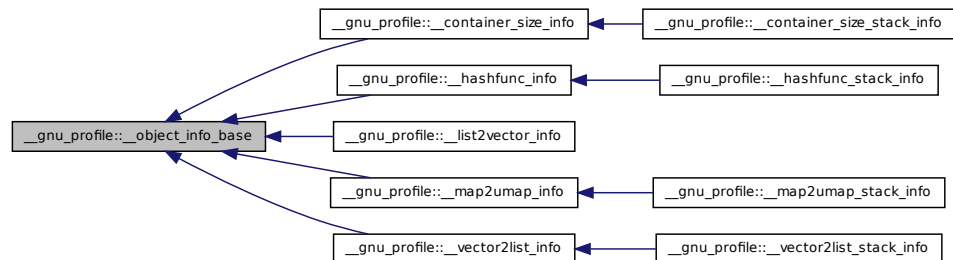

The documentation for this class was generated from the following file:

- [profiler_map_to_unordered_map.h](#)

5.225 __gnu_profile::__object_info_base Class Reference

Base class for a line in the object table.

Inheritance diagram for __gnu_profile::__object_info_base:

Public Member Functions

- `__object_info_base` (`__stack_t __stack`)
- `__object_info_base` (`const __object_info_base &__o`)
- `bool __is_valid` () `const`
- `__stack_t __stack` () `const`
- `virtual void __write` (`FILE *__f`) `const =0`

Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

5.225.1 Detailed Description

Base class for a line in the object table.

Definition at line 130 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler_node.h](#)

5.226 `__gnu_profile::__reentrance_guard` Struct Reference

Reentrance guard.

Static Public Member Functions

- `static bool __get_in` ()
- `static bool & __inside` ()

5.226.1 Detailed Description

Reentrance guard. Mechanism to protect all `__gnu_profile` operations against recursion, multithreaded and exception reentrance.

Definition at line 65 of file `profiler.h`.

The documentation for this struct was generated from the following file:

- [profiler.h](#)

5.227 `__gnu_profile::__stack_hash` Class Reference

Hash function for summary trace using call stack as index.

Public Member Functions

- `std::size_t operator() (__stack_t __s) const`
- `bool operator() (__stack_t __stack1, __stack_t __stack2) const`

5.227.1 Detailed Description

Hash function for summary trace using call stack as index.

Definition at line 96 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler_node.h](#)

5.228 `__gnu_profile::__stack_info_base< __object_info >` Class Template Reference

Base class for a line in the stack table.

Public Member Functions

- `__stack_info_base (const __object_info &__info)=0`
- `virtual const char * __get_id () const =0`
- `virtual float __magnitude () const =0`
- `void __merge (const __object_info &__info)=0`

5.228.1 Detailed Description

`template<typename __object_info> class __gnu_profile::__stack_info_base< __object_info >`

Base class for a line in the stack table.

Definition at line 161 of file `profiler_node.h`.

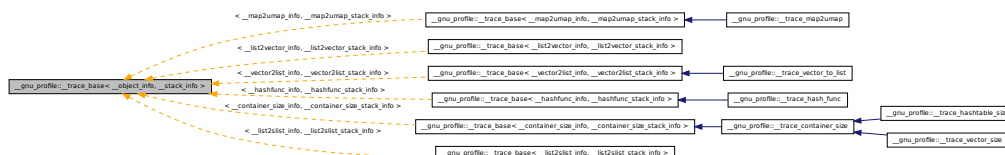

The documentation for this class was generated from the following file:

- [profiler_node.h](#)

5.229 `__gnu_profile::__trace_base< __object_info, __stack_info >` Class Template Reference

Base class for all trace producers.

Inheritance diagram for `__gnu_profile::__trace_base< __object_info, __stack_info >`:

Public Member Functions

- void `__add_object` (`__object_t` object, `__object_info` __info)
- void `__collect_warnings` (`__warning_vector_t` &__warnings)
- `__object_info` * `__get_object_info` (`__object_t` __object)
- void `__retire_object` (`__object_t` __object)
- void `__write` (FILE * __f)

Protected Attributes

- const char * `__id`

5.229.1 Detailed Description

`template<typename __object_info, typename __stack_info> class __gnu_profile::__trace_base< __object_info, __stack_info >`

Base class for all trace producers.

Definition at line 190 of file `profiler_trace.h`.

The documentation for this class was generated from the following file:

- [profiler_trace.h](#)

5.230 `__gnu_profile::__trace_container_size` Class Reference

Container size instrumentation trace producer.

Inheritance diagram for `__gnu_profile::__trace_container_size`:

Public Member Functions

- void **__add_object** (`__object_t` object, `__container_size_info` info)
- void **__collect_warnings** (`__warning_vector_t` &__warnings)

5.240.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT> class std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >

Common base for codecvt functions. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 67 of file codecvt.h.

5.240.2 Member Function Documentation

5.240.2.1 **template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const [protected, pure virtual]**

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

See also

[out](#) for more information.

Implemented in `std::codecvt<_InternT, _ExternT, _StateT >`.

```
5.240.2.2 template<typename _InternT, typename _ExternT, typename
    _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,
    _StateT >::in ( state_type & __state, const extern_type * __from,
    const extern_type * __from_end, const extern_type *& __from_next,
    intern_type * __to, intern_type * __to_end, intern_type *&
    __to_next ) const [inline]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.

from Start of input.

from_end End of input.

from_next Returns start of unconverted data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 195 of file `codecvt.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.240.2.3 `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type * & __from_next, extern_type * __to, extern_type * __to_end, extern_type * & __to_next) const [inline]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling [codecvt::do_out](#).

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.

from Start of input.

from_end End of input.

from_next Returns start of unconverted data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 115 of file codecvt.h.

5.240.2.4 `template<typename _InternT, typename _ExternT, typename
_StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,
_StateT >::unshift (state_type & __state, extern_type * __to,
extern_type * __to_end, extern_type *& __to_next) const
[inline]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to [in\(\)](#) had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.
to Start of output buffer.
to_end End of output buffer.
to_next Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 154 of file codecvt.h.

5.241.1 Detailed Description

`template<typename _CharT> class std::__ctype_abstract_base<_CharT>`

Common base for ctype facet. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 143 of file `locale_facets.h`.

5.241.2 Member Typedef Documentation

5.241.2.1 `template<typename _CharT> typedef _CharT
std::__ctype_abstract_base<_CharT>::char_type`

Typedef for the template parameter.

Reimplemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

Definition at line 148 of file `locale_facets.h`.

5.241.3 Member Function Documentation

5.241.3.1 `template<typename _CharT> virtual bool std::__ctype_abstract_base<_CharT>::do_is (mask __m, char_type __c) const`
`[protected, pure virtual]`

Test `char_type` classification.

This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

c The `char_type` to find the mask of.

m The mask to compare against.

Returns

$(M \& m) \neq 0$.

Implemented in `std::ctype<_CharT>`.

5.241.3.2 `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const`
`[protected, pure virtual]`

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

Implemented in `std::ctype<_CharT>`.

5.241.3.3 `template<typename _CharT> virtual char std::__ctype_abstract_base<_CharT>::do_narrow(char_type, char __dfault) const [protected, pure virtual]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

Returns

- The converted `char`.

Implemented in `std::ctype<_CharT>`.

5.241.3.4 `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_narrow(const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, pure virtual]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns*hi*.Implemented in [std::ctype<_CharT>](#).

5.241.3.5 `template<typename _CharT> virtual const char_type*
 std::__ctype_abstract_base<_CharT>::do_scan_is (mask
 __m, const char_type * __lo, const char_type * __hi) const
 [protected, pure virtual]`

Find char_type matching mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching.
[do_is\(\)](#) must always return the same result for the same input.

Parameters*m* The mask to compare against.*lo* Pointer to start of range.*hi* Pointer to end of range.**Returns**Pointer to a matching char_type if found, else *hi*.Implemented in [std::ctype<_CharT>](#).

5.241.3.6 `template<typename _CharT> virtual const char_type*
 std::__ctype_abstract_base<_CharT>::do_scan_not (mask
 __m, const char_type * __lo, const char_type * __hi) const
 [protected, pure virtual]`

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching.
[do_is\(\)](#) must always return the same result for the same input.

Parameters*m* The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a non-matching `char_type` if found, else *hi*.

Implemented in `std::ctype<_CharT>`.

```
5.241.3.7 template<typename _CharT> virtual char_type
std::__ctype_abstract_base<_CharT>::do_tolower ( char_type )
const [protected, pure virtual]
```

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The lowercase `char_type` if convertible, else *c*.

Implemented in `std::ctype<_CharT>`.

```
5.241.3.8 template<typename _CharT> virtual const char_type*
std::__ctype_abstract_base<_CharT>::do_tolower ( char_type
* __lo, const char_type * __hi ) const [protected, pure
virtual]
```

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Implemented in [std::ctype<_CharT>](#).

5.241.3.9 `template<typename _CharT> virtual char_type
std::__ctype_abstract_base<_CharT>::do_toupper (char_type)
const [protected, pure virtual]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

Implemented in [std::ctype<_CharT>](#).

5.241.3.10 `template<typename _CharT> virtual const char_type*
std::__ctype_abstract_base<_CharT>::do_toupper (char_type
* __lo, const char_type * __hi) const [protected, pure
virtual]`

Convert array to uppercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns*hi*.Implemented in `std::ctype<_CharT>`.

5.241.3.11 `template<typename _CharT> virtual char_type
std::__ctype_abstract_base<_CharT>::do_widen (char) const
[protected, pure virtual]`

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters*c* The char to convert.**Returns**

The converted char_type

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

5.241.3.12 `template<typename _CharT> virtual const char*
std::__ctype_abstract_base<_CharT>::do_widen (const
char * __lo, const char * __hi, char_type * __dest) const
[protected, pure virtual]`

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters*lo* Pointer to start range.*hi* Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Implemented in [std::ctype<_CharT>](#).

5.241.3.13 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::is (const char_type *
__lo, const char_type * __hi, mask * __vec) const [inline]`

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of [ctype<char_type>::do_is\(\)](#).

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

Definition at line 178 of file locale_facets.h.

5.241.3.14 `template<typename _CharT> bool std::__ctype_abstract_base<
_CharT>::is (mask __m, char_type __c) const [inline]`

Test char_type classification.

This function finds a mask M for c and compares it to mask m. It does so by returning the value of [ctype<char_type>::do_is\(\)](#).

Parameters

c The char_type to compare the mask of.

m The mask to compare against.

Returns

(M & m) != 0.

5.241 std::__ctype_abstract_base<_CharT> Class Template Reference 1331

Definition at line 161 of file locale_facets.h.

Referenced by std::regex_traits<_Ch_type>::isctype(), and std::basic_istream<_CharT, _Traits>::sentry::sentry().

5.241.3.15 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::narrow (const char_type
* __lo, const char_type * __hi, char __dfault, char * __to) const
[inline]`

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(lo, hi, dfault, to).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Definition at line 345 of file locale_facets.h.

5.241.3.16 `template<typename _CharT> char std::__ctype_abstract_base<
_CharT>::narrow (char_type __c, char __dfault) const
[inline]`

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. It does so by returning ctype<char_type>::do_narrow(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

- c* The char_type to convert.

dfault Char to return if conversion fails.

Returns

The converted char.

Definition at line 323 of file locale_facets.h.

Referenced by `std::time_put<_CharT, _OutIter >::put()`.

5.241.3.17 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT >::scan_is (mask __m,
const char_type * __lo, const char_type * __hi) const [inline]`

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning `ctype<char_type>::do_scan_is()`.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to matching char_type if found, else *hi*.

Definition at line 194 of file locale_facets.h.

5.241.3.18 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT >::scan_not (mask __m,
const char_type * __lo, const char_type * __hi) const [inline]`

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning `ctype<char_type>::do_scan_not()`.

Parameters

m The mask to compare against.

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale_facets.h.

5.241.3.19 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower (char_type __c) const [inline]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper(c).

Parameters

c The char_type to convert.

Returns

The lowercase char_type if convertible, else *c*.

Definition at line 253 of file locale_facets.h.

5.241.3.20 `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::tolower (char_type * __lo, const char_type * __hi) const [inline]`

Convert array to lowercase.

This function converts each char_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 268 of file locale_facets.h.

5.241.3.21 `template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::toupper (char_type __c) const [inline]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

Definition at line 224 of file `locale_facets.h`.

5.241.3.22 `template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::toupper (char_type * __lo, const char_type * __hi) const [inline]`

Convert array to uppercase.

This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 239 of file `locale_facets.h`.

5.241.3.23 `template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::widen (char __c) const [inline]`

Widen `char` to `char_type`.

This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted `char_type`.

Definition at line 285 of file `locale_facets.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::regex_traits<_Char_type>::isctype()`, and `std::operator<<()`.

5.241.3.24 `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen (const char * __lo, const char * __hi, char_type * __to) const [inline]`

Widen array to `char_type`.

This function converts each char in the input to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 304 of file `locale_facets.h`.

5.242.1 Detailed Description

`template<size_t _Nb> class std::__debug::bitset< _Nb >`

Class [std::bitset](#) with additional safety/checking/debug instrumentation.

Definition at line 43 of file `debug/bitset`.

5.242.2 Member Function Documentation

5.242.2.1 void `__gnu_debug::Safe_sequence_base::_M_detach_all ()`
[protected, inherited]

Detach all iterators, leaving them singular.

5.242.2.2 void `__gnu_debug::Safe_sequence_base::_M_detach_singular ()`
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.242.2.3 `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` [protected, inherited]

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.242.2.4 void __gnu_debug::Safe_sequence_base::M_invalidate_all ()
const [inline, inherited]

Invalidates all iterators.

Definition at line 215 of file safe_base.h.

5.242.2.5 void __gnu_debug::Safe_sequence_base::M_revalidate_singular () [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.242.2.6 void __gnu_debug::Safe_sequence_base::M_swap (_Safe_sequence_base & __x) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.242.3 Member Data Documentation

5.242.3.1 _Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file safe_base.h.

Referenced by __gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if(), __gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single(), and __gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter().

5.242.3.2 _Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file safe_base.h.

Referenced by __gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if(), __gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single(), and __gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter().

5.242.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file safe_base.h.

5.243.1 Detailed Description

template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class
std::__debug::deque<_Tp, _Allocator>

Class [std::deque](#) with safety/checking/debug instrumentation.

Definition at line 43 of file debug/deque.

5.243.2 Member Function Documentation

5.243.2.1 void [__gnu_debug::Safe_sequence_base::_M_detach_all](#) ()
[protected, inherited]

Detach all iterators, leaving them singular.

5.243.2.2 void [__gnu_debug::Safe_sequence_base::_M_detach_singular](#) ()
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

5.243.2.3 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex () throw () [protected, inherited]`

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.243.2.4 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline, inherited]`

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.243.2.5 `void __gnu_debug::_Safe_sequence< deque< _Tp, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.243.2.6 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.243.2.7 `void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.243.2.8 `void __gnu_debug::_Safe_sequence< deque< _Tp, _Allocator > >::_M_transfer_iter (const _Safe_iterator< _Iterator, deque< _Tp, _Allocator > > & __x) [inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.243.3 Member Data Documentation

5.243.3.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.243.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.243.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

5.244.1 Detailed Description

template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::__debug::list< _Tp, _Allocator >

Class [std::list](#) with safety/checking/debug instrumentation.

Definition at line 43 of file debug/list.

5.244.2 Member Function Documentation

5.244.2.1 void __gnu_debug::Safe_sequence_base::_M_detach_all ()
[protected, inherited]

Detach all iterators, leaving them singular.

5.244.2.2 void __gnu_debug::Safe_sequence_base::_M_detach_singular ()
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

5.244.2.3 __gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw () [protected, inherited]

For use in [_Safe_sequence](#).

Referenced by [__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if\(\)](#), and [__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter\(\)](#).

5.244.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ()
const [inline, inherited]`

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.244.2.5 `void __gnu_debug::Safe_sequence< list< _Tp, _Allocator >
>::_M_invalidate_if(_Predicate __pred) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.244.2.6 `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular () [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.244.2.7 `void __gnu_debug::Safe_sequence_base::_M_swap (
_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.244.2.8 `void __gnu_debug::Safe_sequence< list< _Tp, _Allocator >
>::_M_transfer_iter(const _Safe_iterator< _Iterator, list< _Tp,
_Allocator > > & __x) [inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.244.3 Member Data Documentation

5.244.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_
const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

5.245 `std::__debug::map< _Key, _Tp, _Compare, _Allocator >` Class Template Reference 1351

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.244.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.244.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

5.246.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>,
typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>
class std::__debug::multimap< _Key, _Tp, _Compare, _Allocator >
```

Class `std::multimap` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/multimap.h`.

5.246.2 Member Function Documentation

5.246.2.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`
[protected, inherited]

Detach all iterators, leaving them singular.

5.246.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators *i* attached to this sequence, *i*->_M_version == _M_version.

5.246.2.3 `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` **[protected, inherited]**

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.246.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ()`
const [inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.246.2.5 `void __gnu_debug::Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred)`
[inherited]

Invalidates all iterators *x* that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.246.2.6 void __gnu_debug::Safe_sequence_base::_M_revalidate_singular () [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.246.2.7 void __gnu_debug::Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.246.2.8 void __gnu_debug::Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_iter (const _Safe_iterator< _Iterator, multimap< _Key, _Tp, _Compare, _Allocator > & __x) [inherited]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.246.3 Member Data Documentation

5.246.3.1 _Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 166 of file safe_base.h.

Referenced by __gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if(), __gnu_debug::Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single(), and __gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter().

5.247.1 Detailed Description

```
template<typename _Key, typename _Compare = std::less<_Key>, typename
_Allocator = std::allocator<_Key>> class std::__debug::multiset< _Key, _-
_Compare, _Allocator >
```

Class [std::multiset](#) with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/multiset.h`.

5.247.2 Member Function Documentation

5.247.2.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`
[protected, inherited]

Detach all iterators, leaving them singular.

5.247.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.247.2.3 `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_-`
`base::_M_get_mutex () throw ()` [protected,
inherited]

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`,
and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.247.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ()`
`const` [inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.247.2.5 `void __gnu_debug::_Safe_sequence< multiset< _Key, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred)`
[inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.247.2.6 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ()`
[protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.247.2.7 `void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x)`
[protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.247.2.8 `void __gnu_debug::_Safe_sequence< multiset< _Key, _Compare, _Allocator > >::_M_transfer_iter (const _Safe_iterator< _Iterator, multiset< _Key, _Compare, _Allocator > > & __x)`
[inherited]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.247.3 Member Data Documentation

5.247.3.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` **[inherited]**

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.248 std::__debug::set< _Key, _Compare, _Allocator > Class Template Reference 1367

5.247.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 163 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter().

5.247.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 169 of file safe_base.h.

5.250.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>,
typename _Pred = std::equal_to<_Key>, typename _Alloc = std::allocator<_Key>> class std::__debug::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >
```

Class [std::unordered_multimap](#) with safety/checking/debug instrumentation.

Definition at line 311 of file `debug/unordered_map`.

5.250.2 Member Function Documentation

5.250.2.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all ()`
[protected, inherited]

Detach all iterators, leaving them singular.

5.250.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ()`
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.250.2.3 `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw ()` **[protected, inherited]**

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.250.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ()`
const [inline, inherited]

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.250.2.5 `void __gnu_debug::Safe_sequence< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::M_invalidate_if (_Predicate __pred) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.250.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular () [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.250.2.7 `void __gnu_debug::Safe_sequence_base::M_swap (_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.250.2.8 `void __gnu_debug::Safe_sequence< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::M_transfer_iter (const _Safe_iterator< _Iterator, unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > & __x) [inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.250.3 Member Data Documentation

5.250.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_invalidate_if()`, `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_invalidate_single()`, and `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_iter()`.

5.250.3.2 `_Safe_iterator_base*` `__gnu_debug::_Safe_sequence_base::_M_iterators` `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_iter()`.

5.250.3.3 `unsigned int` `__gnu_debug::_Safe_sequence_base::_M_version` `[mutable, inherited]`

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

5.251.1 Detailed Description

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename
_Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>
class std::__debug::unordered_multiset< _Value, _Hash, _Pred, _Alloc >
```

Class `std::unordered_multiset` with safety/checking/debug instrumentation.

Definition at line 308 of file `debug/unordered_set`.

5.251.2 Member Function Documentation

5.251.2.1 void `__gnu_debug::_Safe_sequence_base::_M_detach_all` ()
[`protected`, `inherited`]

Detach all iterators, leaving them singular.

5.251.2.2 void `__gnu_debug::_Safe_sequence_base::_M_detach_singular` ()
[`protected`, `inherited`]

Detach all singular iterators.

Postcondition

for all iterators *i* attached to this sequence, *i*->_M_version == _M_version.

5.251.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex () throw () [protected, inherited]`

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.251.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all () const [inline, inherited]`

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.251.2.5 `void __gnu_debug::Safe_sequence< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]`

Invalidates all iterators *x* that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.251.2.6 `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular () [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.251.2.7 `void __gnu_debug::Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.251.2.8 `void __gnu_debug::_Safe_sequence< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_transfer_iter (const _Safe_iterator< _Iterator, unordered_multiset< _Value, _Hash, _Pred, _Alloc > > & __x) [inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.251.3 Member Data Documentation

5.251.3.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 166 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.251.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]`

The list of mutable iterators that reference this container.

Definition at line 163 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_invalidate_single()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.251.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable, inherited]`

The container version number. This number may never be 0.

Definition at line 169 of file `safe_base.h`.

5.252.1 Detailed Description

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename
_Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>
class std::__debug::unordered_set<_Value, _Hash, _Pred, _Alloc>
```

Class `std::unordered_set` with safety/checking/debug instrumentation.

Definition at line 50 of file `debug/unordered_set`.

5.252.2 Member Function Documentation

5.252.2.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all()`
[protected, inherited]

Detach all iterators, leaving them singular.

5.252.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular()`
[protected, inherited]

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.252.2.3 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex () throw () [protected, inherited]`

For use in [_Safe_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_iter()`.

5.252.2.4 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline, inherited]`

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.252.2.5 `void __gnu_debug::_Safe_sequence< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.252.2.6 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.252.2.7 `void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.252.2.8 void __gnu_debug::Safe_sequence< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_transfer_iter (const _Safe_iterator< _Iterator, unordered_set< _Value, _Hash, _Pred, _Alloc > > & __x)
 [inherited]

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

5.252.3 Member Data Documentation

5.253.1 Detailed Description

```
template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class
std::__debug::vector< _Tp, _Allocator >
```

Class [std::vector](#) with safety/checking/debug instrumentation.

Definition at line 45 of file debug/vector.

5.253.2 Constructor & Destructor Documentation

```
5.253.2.1 template<typename _Tp, typename _Allocator =
std::allocator<_Tp>> std::__debug::vector< _Tp, _Allocator
>::vector ( const_Base & __x ) [inline]
```

Construction from a release-mode vector.

Definition at line 107 of file debug/vector.

5.253.3 Member Function Documentation

```
5.253.3.1 void __gnu_debug::Safe_sequence_base::_M_detach_all ( )
[protected, inherited]
```

Detach all iterators, leaving them singular.

```
5.253.3.2 void __gnu_debug::Safe_sequence_base::_M_detach_singular ( )
[protected, inherited]
```

Detach all singular iterators.

Postcondition

for all iterators *i* attached to this sequence, *i*->_M_version == _M_version.

```
5.253.3.3 __gnu_cxx::__mutex& __gnu_debug::Safe_sequence_-
base::_M_get_mutex ( ) throw () [protected,
inherited]
```

For use in [_Safe_sequence](#).

Referenced by [__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if\(\)](#),
and [__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_iter\(\)](#).

5.253.3.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ()
const [inline, inherited]`

Invalidates all iterators.

Definition at line 215 of file `safe_base.h`.

5.253.3.5 `void __gnu_debug::Safe_sequence< vector< _Tp, _Allocator >
>::_M_invalidate_if(_Predicate __pred) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. The user of this routine should be careful not to make copies of the iterators passed to `pred`, as the copies may interfere with the invalidation.

5.253.3.6 `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ()
[protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.253.3.7 `void __gnu_debug::Safe_sequence_base::_M_swap (
_Safe_sequence_base & __x) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.253.3.8 `void __gnu_debug::Safe_sequence< vector< _Tp, _Allocator >
>::_M_transfer_iter(const _Safe_iterator< _Iterator, vector< _Tp,
_Allocator > > & __x) [inherited]`

Transfers all iterators that reference this memory location to this sequence from whatever sequence they are attached to.

- `static _Setter< void, void > __setter (promise< void > *__prom)`
- `template<typename _Tp >`
`static bool _S_check (const shared_ptr< _Tp > &__p)`

5.263.1 Detailed Description

Shared state between a promise and one or more associated futures.

Definition at line 257 of file future.

The documentation for this class was generated from the following file:

- [future](#)

5.264 std::__is_location_invariant< _Tp > Struct Template Reference

Inherits `integral_constant< bool,(is_pointer< _Tp >::value||is_member_pointer< _Tp >::value)>`.

Inherited by `std::__is_location_invariant< _Simple_type_wrapper< _Tp > >`.

5.264.1 Detailed Description

`template<typename _Tp> struct std::__is_location_invariant< _Tp >`

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape. Also implies a trivial copy constructor and assignment operator.

Definition at line 1479 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

5.265 `std::__iterator_traits< _Iterator, bool >` Struct Template Reference

Traits class for iterators.

Inheritance diagram for `std::__iterator_traits< _Iterator, bool >`:

5.265.1 Detailed Description

```
template<typename _Iterator,    bool    = __has_iterator_category<_
Iterator>::value> struct std::__iterator_traits< _Iterator, bool >
```

Traits class for iterators. This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the `Iterator` argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

Definition at line 145 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl_iterator_base_types.h](#)

5.266 `std::__numeric_limits_base` Struct Reference

Part of [std::numeric_limits](#).

Inheritance diagram for std::__numeric_limits_base:

Static Public Attributes

- static const int [digits](#)
- static const int [digits10](#)
- static const [float_denorm_style](#) [has_denorm](#)
- static const bool [has_denorm_loss](#)
- static const bool [has_infinity](#)

- static const bool [is_bounded](#)
- static const bool [is_exact](#)
- static const bool [is_iec559](#)
- static const bool [is_integer](#)
- static const bool [is_modulo](#)
- static const bool [is_signed](#)
- static const bool [is_specialized](#)
- static const int [max_digits10](#)
- static const int [max_exponent](#)
- static const int [max_exponent10](#)
- static const int [min_exponent](#)
- static const int [min_exponent10](#)
- static const int [radix](#)
- static const [float_round_style](#) [round_style](#)
- static const bool [tinyness_before](#)
- static const bool [traps](#)

5.266.1 Detailed Description

Part of [std::numeric_limits](#). The `static const` members are usable as integral constant expressions.

Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the [std::numeric_limits](#) class.

Definition at line 190 of file `limits`.

5.266.2 Member Data Documentation

5.266.2.1 `const int std::__numeric_limits_base::digits` `[static]`

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 199 of file `limits`.

5.266.2.2 `const int std::__numeric_limits_base::digits10` `[static]`

The number of base 10 digits that can be represented without change.

Definition at line 201 of file `limits`.

5.266.2.3 `const float_denorm_style std::__numeric_limits_base::has_denorm` `[static]`

See [std::float_denorm_style](#) for more information.

Definition at line 244 of file `limits`.

5.266.2.4 `const bool std::__numeric_limits_base::has_denorm_loss` `[static]`

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result. [18.2.1.2]/42

Definition at line 247 of file `limits`.

5.266.2.5 const bool std::__numeric_limits_base::has_infinity [static]

True if the type has a representation for positive infinity.

Definition at line 236 of file limits.

5.266.2.6 const bool std::__numeric_limits_base::has_quiet_NaN [static]

True if the type has a representation for a quiet (non-signaling) *Not a Number*.

Definition at line 239 of file limits.

5.266.2.7 const bool std::__numeric_limits_base::has_signaling_NaN [static]

True if the type has a representation for a signaling *Not a Number*.

Definition at line 242 of file limits.

5.266.2.8 const bool std::__numeric_limits_base::is_bounded [static]

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types. [18.2.1.2]/54

Definition at line 255 of file limits.

5.266.2.9 const bool std::__numeric_limits_base::is_exact [static]

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer. [18.2.1.2]/15

Definition at line 216 of file limits.

5.266.2.10 const bool std::__numeric_limits_base::is_iec559 [static]

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 251 of file limits.

5.266.2.11 const bool std::__numeric_limits_base::is_integer [static]

True if the type is integer. Is this supposed to be *if the type is integral*?

Definition at line 211 of file limits.

5.266.2.12 `const bool std::__numeric_limits_base::is_modulo [static]`

True if the type is *modulo*, that is, if it is possible to add two positive numbers and have a result that wraps around to a third number that is less. Typically false for floating types, true for unsigned integers, and true for signed integers.

Definition at line 260 of file limits.

5.266.2.13 `const bool std::__numeric_limits_base::is_signed [static]`

True if the type is signed.

Definition at line 208 of file limits.

5.266.2.14 `const bool std::__numeric_limits_base::is_specialized [static]`

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 194 of file limits.

5.266.2.15 `const int std::__numeric_limits_base::max_digits10 [static]`

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 205 of file limits.

5.266.2.16 `const int std::__numeric_limits_base::max_exponent [static]`

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 230 of file limits.

5.266.2.17 `const int std::__numeric_limits_base::max_exponent10 [static]`

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 233 of file limits.

5.266.2.18 const int std::__numeric_limits_base::min_exponent [static]

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 223 of file `limits`.

5.266.2.19 const int std::__numeric_limits_base::min_exponent10 [static]

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 226 of file `limits`.

5.266.2.20 const int std::__numeric_limits_base::radix [static]

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 219 of file `limits`.

5.266.2.21 const float_round_style std::__numeric_limits_base::round_style [static]

See [std::float_round_style](#) for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

Definition at line 269 of file `limits`.

5.266.2.22 const bool std::__numeric_limits_base::tinyness_before [static]

True if tininess is detected before rounding. (see IEC 559)

Definition at line 265 of file `limits`.

5.266.2.23 const bool std::__numeric_limits_base::traps [static]

True if trapping is implemented for this type.

Definition at line 263 of file `limits`.

The documentation for this struct was generated from the following file:

- [limits](#)

5.267 `std::__parallel::CRandNumber< _MustBeInt >` Struct Template Reference

Functor wrapper for `std::rand()`.

Public Member Functions

- `int operator() (int __limit)`

5.267.1 Detailed Description

```
template<typename _MustBeInt = int> struct std::__parallel::_-
CRandNumber< _MustBeInt >
```

Functor wrapper for `std::rand()`.

Definition at line 1656 of file `algo.h`.

5.283.1 Detailed Description

```
template<typename _Tp, typename _Alloc> class std::_Deque_base< _Tp, _-
Alloc >
```

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual `Tp` element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 436 of file `stl_deque.h`.

5.283.2 Member Function Documentation

```
5.283.2.1 template<typename _Tp , typename _Alloc > void
std::_Deque_base< _Tp, _Alloc >::_M_initialize_map ( size_t
__num_elements ) [protected]
```

Layout storage.

Parameters

num_elements The count of `T`'s for which to allocate space at first.

Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 572 of file `stl_deque.h`.

References `std::max()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`.

The documentation for this class was generated from the following file:

5.284.1 Detailed Description

template<typename _Tp, typename _Ref, typename _Ptr> struct std::_Deque_iterator< _Tp, _Ref, _Ptr >

A deque::iterator. Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

Definition at line 103 of file `stl_deque.h`.

5.284.2 Member Function Documentation

5.284.2.1 **template<typename _Tp, typename _Ref, typename _Ptr>**
void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (
_Map_pointer __new_node) [inline]

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

Definition at line 231 of file `stl_deque.h`.

The documentation for this struct was generated from the following file:

auto operator() (_CVArg &__arg, tuple< _Args...> &__tuple) const volatile->
decltype(__arg(declval< _Args >()....))`

5.312.1 Detailed Description

`template<typename _Arg> class std::_Mu< _Arg, true, false >`

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped).
[TR1 3.6.3/5 bullet 2]

Definition at line 970 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

5.313 `std::_Mu< reference_wrapper< _Tp >, false, false >` Class Template Reference

Public Types

- `typedef _Tp & result_type`

Public Member Functions

- `template<typename _CVRef, typename _Tuple >
result_type operator() (_CVRef &__arg, _Tuple &) const volatile`

5.313.1 Detailed Description

`template<typename _Tp> class std::_Mu< reference_wrapper< _Tp >, false, false >`

If the argument is `reference_wrapper<_Tp>`, returns the underlying reference. [TR1 3.6.3/5 bullet 1]

Definition at line 949 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

5.314 `std::_Placeholder< _Num >` Struct Template Reference

The type of placeholder objects defined by `libstdc++`.

5.314.1 Detailed Description

`template<int _Num> struct std::_Placeholder< _Num >`

The type of placeholder objects defined by `libstdc++`.

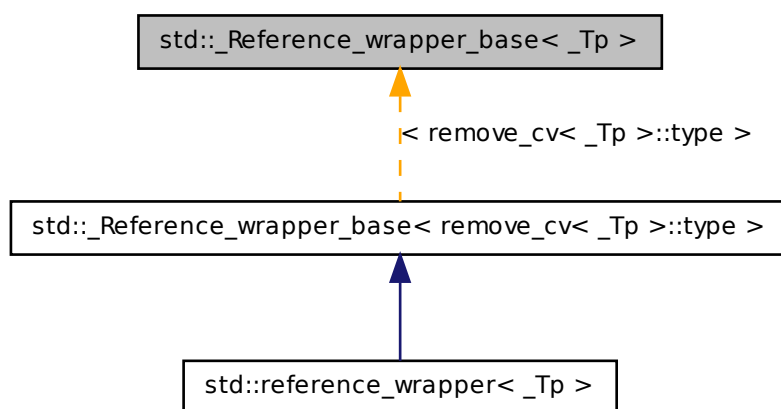

Definition at line 836 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

5.315 `std::_Reference_wrapper_base< _Tp >` Struct Template Reference

Inheritance diagram for `std::_Reference_wrapper_base< _Tp >`:

5.315.1 Detailed Description

```
template<typename _Tp> struct std::_Reference_wrapper_base< _Tp >
```

Derives from [unary_function](#) or [binary_function](#) when it can. Specializations handle all of the easy cases. The primary template determines what to do with a class type, which may derive from both [unary_function](#) and [binary_function](#).

Definition at line 305 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

5.316 `std::_Safe_tuple_element< __i, _Tuple > Struct Template Reference`

Inheritance diagram for `std::_Safe_tuple_element< __i, _Tuple >`:

5.316.1 Detailed Description

`template<int __i, typename _Tuple> struct std::_Safe_tuple_element< __i, _Tuple >`

Like `tuple_element`, but returns `_No_tuple_element` when `tuple_element` would return an error.

Definition at line 923 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

5.317 `std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe > Struct Template Reference`

Inheritance diagram for `std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >`:

5.317.1 Detailed Description

```
template<int __i, typename _Tuple, bool _IsSafe> struct std::_Safe_tuple_
element_impl< __i, _Tuple, _IsSafe >
```

Implementation helper for [_Safe_tuple_element](#). This primary template handles the case where it is safe to use `tuple_element`.

Definition at line 904 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

5.318 std::_Safe_tuple_element_impl< __i, _Tuple, false > Struct Template Reference

Public Types

- `typedef _No_tuple_element type`

5.318.1 Detailed Description

```
template<int __i, typename _Tuple> struct std::_Safe_tuple_element_impl< __i,
_Tuple, false >
```

Implementation helper for [_Safe_tuple_element](#). This partial specialization handles the case where it is not safe to use `tuple_element`. We just return `_No_tuple_element`.

Definition at line 913 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

5.319 `std::_Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

Inheritance diagram for `std::_Temporary_buffer<_ForwardIterator, _Tp>`:

Public Types

- typedef pointer **iterator**
- typedef value_type * **pointer**
- typedef ptrdiff_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- [_Temporary_buffer](#) (`_ForwardIterator __first, _ForwardIterator __last`)
- iterator [begin](#) ()
- iterator [end](#) ()
- size_type [requested_size](#) () const
- size_type [size](#) () const

Protected Attributes

- pointer **_M_buffer**
- size_type **_M_len**
- size_type **_M_original_len**

5.319.1 Detailed Description

template<typename _ForwardIterator, typename _Tp> class std::_Temporary_buffer< _ForwardIterator, _Tp >

This class is used in two places: [stl_algo.h](#) and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

Definition at line 121 of file `stl_tembuf.h`.

5.319.2 Constructor & Destructor Documentation

5.319.2.1 **template<typename _ForwardIterator, typename _Tp>
> std::_Temporary_buffer< _ForwardIterator, _Tp
>::_Temporary_buffer (_ForwardIterator __first,
_ForwardIterator __last)**

Constructs a temporary buffer of a size somewhere between zero and the size of the given range.

Definition at line 244 of file `stl_tembuf.h`.

References `std::pair< _T1, _T2 >::first`, `std::get_temporary_buffer()`, `std::return_temporary_buffer()`, and `std::pair< _T1, _T2 >::second`.

5.319.3 Member Function Documentation

5.319.3.1 **template<typename _ForwardIterator, typename _Tp> iterator
std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ()
[inline]**

As per Table mumble.

Definition at line 150 of file `stl_tembuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

5.319.3.2 **template<typename _ForwardIterator, typename _Tp> iterator
std::_Temporary_buffer< _ForwardIterator, _Tp >::end ()
[inline]**

As per Table mumble.

Definition at line 155 of file `stl_tembuf.h`.

5.319.3.3 `template<typename _ForwardIterator, typename _Tp> size_type
std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size () const [inline]`

Returns the size requested by the constructor; may be `>size()`.

Definition at line 145 of file `stl_tempbuf.h`.

Referenced by `std::stable_partition()`.

5.319.3.4 `template<typename _ForwardIterator, typename _Tp> size_type
std::_Temporary_buffer< _ForwardIterator, _Tp >::size () const [inline]`

As per Table mumble.

Definition at line 140 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

The documentation for this class was generated from the following file:

- typedef `_Res result_type`

5.327.1 Detailed Description

```
template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_
type_impl< _Res(_ArgTypes...)>
```

Retrieve the result type for a function type.

Definition at line 85 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

5.328 `std::_Weak_result_type_impl< _Res(_- Class::*)(_ArgTypes...) const >` Struct Template Reference

Retrieve result type for a const member function pointer.

Public Types

- typedef `_Res result_type`

5.328.1 Detailed Description

```
template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl< _Res(_Class::*)(_ArgTypes...) const >
```

Retrieve result type for a const member function pointer.

Definition at line 145 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

5.329 `std::_Weak_result_type_impl< _Res(_- Class::*)(_ArgTypes...) const volatile >` Struct Template Reference

Retrieve result type for a const volatile member function pointer.

Public Types

- typedef _Res **result_type**

5.329.1 Detailed Description

**template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl< _Res(_Class::*)(_ArgTypes...) const volatile >**

Retrieve result type for a const volatile member function pointer.

Definition at line 163 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

5.330 std::_Weak_result_type_impl< _Res(_- Class::*)(_ArgTypes...) volatile > Struct Tem- plate Reference

Retrieve result type for a volatile member function pointer.

Public Types

- typedef _Res **result_type**

5.330.1 Detailed Description

**template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl< _Res(_Class::*)(_ArgTypes...) volatile >**

Retrieve result type for a volatile member function pointer.

Definition at line 154 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

5.331 `std::_Weak_result_type_impl< _Res(_Class::*)(_ArgTypes...)>` Struct Template Reference

Retrieve result type for a member function pointer.

Public Types

- `typedef _Res result_type`

5.331.1 Detailed Description

```
template<typename _Res, typename _Class, typename... _ArgTypes> struct
std::_Weak_result_type_impl< _Res(_Class::*)(_ArgTypes...)>
```

Retrieve result type for a member function pointer.

Definition at line 136 of file `functional`.

5.335 `std::aligned_storage< _Len, _Align >` Struct Template Reference

Alignment type.

Inheritance diagram for `std::aligned_storage< _Len, _Align >`:

5.335.1 Detailed Description

```
template<std::size_t _Len, std::size_t _Align = __alignof__(typename __-
aligned_storage_msa<_Len>::__type)> struct std::aligned_storage< _Len, _-
Align >
```

Alignment type. The value of `_Align` is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than `_Len` (3.9). The member typedef `type` shall be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.

Definition at line 370 of file `type_traits`.

The documentation for this struct was generated from the following file:

- `void reset (element_type *__p=0) throw ()`

5.357.1 Detailed Description

template<typename _Tp> class std::auto_ptr< _Tp >

A simple smart pointer providing strict ownership semantics. The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyCon requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.

_GLIBCXX_RESOLVE_LIB_DEFECTS 127. auto_ptr<> conversion issues These resolutions have all been incorporated.

Definition at line 85 of file auto_ptr.h.

5.357.2 Member Typedef Documentation

5.357.2.1 template<typename _Tp> typedef _Tp std::auto_ptr< _Tp >::element_type

The pointed-to type.

Definition at line 92 of file auto_ptr.h.

5.357.3 Constructor & Destructor Documentation

5.357.3.1 template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr (element_type * __p = 0) throw () [inline, explicit]

An `auto_ptr` is usually constructed from a raw pointer.

Parameters

p A pointer (defaults to NULL).

This object now *owns* the object pointed to by *p*.

Definition at line 101 of file auto_ptr.h.

5.357.3.2 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr (auto_ptr<_Tp> & __a) throw () [inline]`

An auto_ptr can be constructed from another auto_ptr.

Parameters

a Another auto_ptr of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 110 of file auto_ptr.h.

5.357.3.3 `template<typename _Tp> template<typename _Tp1 > std::auto_ptr<_Tp>::auto_ptr (auto_ptr<_Tp1> & __a) throw () [inline]`

An auto_ptr can be constructed from another auto_ptr.

Parameters

a Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 123 of file auto_ptr.h.

5.357.3.4 `template<typename _Tp> std::auto_ptr<_Tp>::~~auto_ptr () [inline]`

When the auto_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ()` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

Definition at line 168 of file auto_ptr.h.

5.357.3.5 `template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr (auto_ptr_ref< element_type > __ref) throw () [inline]`

Automatic conversions.

These operations convert an `auto_ptr` into and from an `auto_ptr_ref` automatically as needed. This allows constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(....);  
...  
auto_ptr<Base> ptr = func_returning_auto_ptr(....);
```

Definition at line 258 of file `auto_ptr.h`.

5.357.4 Member Function Documentation

5.357.4.1 `template<typename _Tp> element_type* std::auto_ptr< _Tp >::get (void) const throw () [inline]`

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This `auto_ptr` still owns the memory.

Definition at line 209 of file `auto_ptr.h`.

5.357.4.2 `template<typename _Tp> element_type& std::auto_ptr< _Tp >::operator*() const throw () [inline]`

Smart pointer dereferencing.

If this `auto_ptr` no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 179 of file `auto_ptr.h`.

5.357.4.3 `template<typename _Tp> element_type* std::auto_ptr<_Tp>::operator-> () const throw () [inline]`

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 192 of file `auto_ptr.h`.

5.357.4.4 `template<typename _Tp> template<typename _Tp1 > auto_ptr& std::auto_ptr<_Tp>::operator= (auto_ptr<_Tp1> & __a) throw () [inline]`

`auto_ptr` assignment operator.

Parameters

a Another `auto_ptr` of a different but related type.

A pointer-to-`Tp1` must be convertible to a pointer-to-`Tp`/`element_type`.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 152 of file `auto_ptr.h`.

5.357.4.5 `template<typename _Tp> auto_ptr& std::auto_ptr<_Tp>::operator= (auto_ptr<_Tp> & __a) throw () [inline]`

`auto_ptr` assignment operator.

Parameters

a Another `auto_ptr` of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 134 of file `auto_ptr.h`.

5.357.4.6 `template<typename _Tp> element_type* std::auto_ptr<_Tp>::release () throw () [inline]`

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This `auto_ptr` no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 223 of file `auto_ptr.h`.

5.357.4.7 `template<typename _Tp> void std::auto_ptr<_Tp>::reset (`
`element_type * __p = 0) throw () [inline]`

Forcibly deletes the managed object.

Parameters

p A pointer (defaults to NULL).

This object now *owns* the object pointed to by *p*. The previous object has been deleted.

Definition at line 238 of file `auto_ptr.h`.

The documentation for this class was generated from the following file:

- [auto_ptr.h](#)

5.358 `std::auto_ptr_ref<_Tp1>` Struct Template Reference

Public Member Functions

- `auto_ptr_ref(_Tp1 * __p)`

Public Attributes

- `_Tp1 * _M_ptr`

5.358.1 Detailed Description

`template<typename _Tp1> struct std::auto_ptr_ref< _Tp1 >`

A wrapper class to provide [auto_ptr](#) with reference semantics. For example, an [auto_ptr](#) can be assigned (or constructed from) the result of a function which returns an [auto_ptr](#) by value.

All the [auto_ptr_ref](#) stuff should happen behind the scenes.

Definition at line 46 of file `auto_ptr.h`.

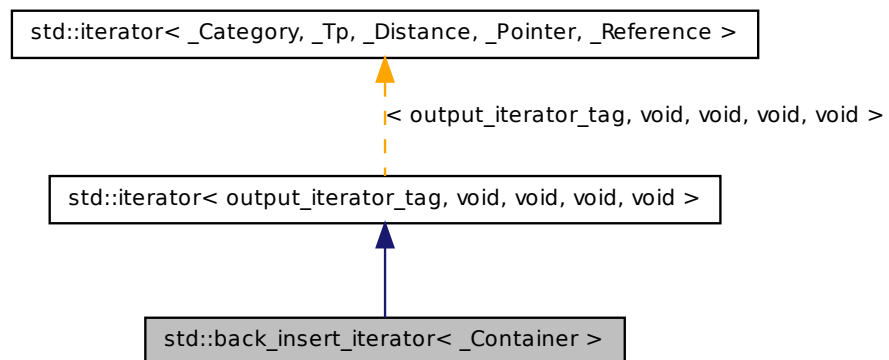

The documentation for this struct was generated from the following file:

- [auto_ptr.h](#)

5.359 `std::back_insert_iterator< _Container >` Class Template Reference

Turns assignment into insertion.

Inheritance diagram for `std::back_insert_iterator< _Container >`:

Public Types

- `typedef _Container container_type`

- typedef void [difference_type](#)
- typedef [output_iterator_tag](#) [iterator_category](#)
- typedef void [pointer](#)
- typedef void [reference](#)
- typedef void [value_type](#)

Public Member Functions

- [back_insert_iterator](#) ([_Container](#) &__x)
- [back_insert_iterator](#) & [operator*](#) ()
- [back_insert_iterator](#) & [operator++](#) ()
- [back_insert_iterator](#) [operator++](#) (int)
- [back_insert_iterator](#) & [operator=](#) (const typename [_Container::value_type](#) &__value)
- [back_insert_iterator](#) & [operator=](#) (typename [_Container::value_type](#) &&__value)

Protected Attributes

- [_Container](#) * [container](#)

5.359.1 Detailed Description

template<typename [_Container](#)> class `std::back_insert_iterator<_Container>`

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

Definition at line 394 of file `stl_iterator.h`.

5.359.2 Member Typedef Documentation

5.359.2.1 **template<typename [_Container](#)> typedef [_Container](#) `std::back_insert_iterator<_Container>::container_type`**

A nested typedef for the type of whatever container you used.

Definition at line 402 of file `stl_iterator.h`.

5.359.2.2 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 124 of file `stl_iterator_base_types.h`.

5.359.2.3 `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 120 of file `stl_iterator_base_types.h`.

5.359.2.4 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value_type.

Definition at line 126 of file `stl_iterator_base_types.h`.

5.359.2.5 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value_type.

Definition at line 128 of file `stl_iterator_base_types.h`.

5.359.2.6 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 122 of file `stl_iterator_base_types.h`.

5.359.3 Constructor & Destructor Documentation

5.359.3.1 `template<typename _Container > std::back_insert_iterator< _Container >::back_insert_iterator (_Container & __x) [inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 406 of file `stl_iterator.h`.

5.359.4 Member Function Documentation

5.359.4.1 `template<typename _Container > back_insert_iterator&
std::back_insert_iterator< _Container >::operator* ()
[inline]`

Simply returns *this.

Definition at line 444 of file stl_iterator.h.

5.359.4.2 `template<typename _Container > back_insert_iterator
std::back_insert_iterator< _Container >::operator++ (int)
[inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 454 of file stl_iterator.h.

5.359.4.3 `template<typename _Container > back_insert_iterator&
std::back_insert_iterator< _Container >::operator++ ()
[inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 449 of file stl_iterator.h.

5.359.4.4 `template<typename _Container > back_insert_iterator&
std::back_insert_iterator< _Container >::operator= (const
typename _Container::value_type & __value) [inline]`

Parameters

value An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 428 of file stl_iterator.h.

5.365.1 Detailed Description

template<typename _CharT, typename _Traits> class std::basic_filebuf< _CharT, _Traits >

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Definition at line 67 of file `fstream`.

5.365.2 Member Typedef Documentation

5.365.2.1 **template<typename _CharT, typename _Traits> typedef basic_streambuf<char_type, traits_type> std::basic_filebuf< _CharT, _Traits >::__streambuf_type**

This is a non-standard type.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 77 of file `fstream`.

5.365.2.2 **template<typename _CharT, typename _Traits> typedef _CharT std::basic_filebuf< _CharT, _Traits >::char_type**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

Reimplemented in [__gnu_cxx::stdio_filebuf<_CharT, _Traits>](#).

Definition at line 71 of file fstream.

5.365.2.3 template<typename _CharT, typename _Traits> typedef traits_type::int_type std::basic_filebuf<_CharT, _Traits>::int_type

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

Reimplemented in [__gnu_cxx::stdio_filebuf<_CharT, _Traits>](#).

Definition at line 73 of file fstream.

5.365.2.4 template<typename _CharT, typename _Traits> typedef traits_type::off_type std::basic_filebuf<_CharT, _Traits>::off_type

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

Reimplemented in [__gnu_cxx::stdio_filebuf<_CharT, _Traits>](#).

Definition at line 75 of file fstream.

5.365.2.5 template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_filebuf<_CharT, _Traits>::pos_type

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

Reimplemented in [__gnu_cxx::enc_filebuf<_CharT>](#), and [__gnu_cxx::stdio_filebuf<_CharT, _Traits>](#).

Definition at line 74 of file fstream.

5.365.2.6 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_filebuf<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Reimplemented in `__gnu_cxx::enc_filebuf<_CharT>`, and `__gnu_cxx::stdio_filebuf<_CharT, _Traits>`.

Definition at line 72 of file `fstream`.

5.365.3 Constructor & Destructor Documentation

5.365.3.1 `template<typename _CharT, typename _Traits> std::basic_filebuf< _CharT, _Traits>::basic_filebuf ()`

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

Definition at line 79 of file `fstream.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`.

5.365.3.2 `template<typename _CharT, typename _Traits> virtual std::basic_filebuf<_CharT, _Traits>::~~basic_filebuf () [inline, virtual]`

The destructor closes the file first.

Definition at line 214 of file `fstream`.

5.365.4 Member Function Documentation

5.365.4.1 `template<typename _CharT, typename _Traits> void std::basic_filebuf<_CharT, _Traits>::_M_create_pback () [inline, protected]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 172 of file `fstream`.

5.365.4.2 `template<typename _CharT, typename _Traits> void
std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback () throw
() [inline, protected]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 189 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.4.3 `template<typename _CharT, typename _Traits> void
std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (streamsize
__off) [inline, protected]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 390 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.4.4 `template<typename _CharT , typename _Traits > basic_filebuf<
_CharT, _Traits >::_filebuf_type * std::basic_filebuf< _CharT,
_Traits >::close ()`

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 128 of file fstream.tcc.

References `std::basic_filebuf< _CharT, _Traits >::is_open()`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

5.365.4.5 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::eback () const
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 460 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.4.6 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::egptr () const
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 466 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.4.7 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::epptr () const
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 513 of file streambuf.

Referenced by `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

5.365.4.8 `template<typename _CharT, typename _Traits> void
std::basic_streambuf<_CharT, _Traits>::gbump (int __n)
[inline, protected, inherited]`

Moving the read position.

Parameters

n The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file streambuf.

5.365.4.9 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf<_CharT, _Traits>::getloc () const
[inline, inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 222 of file streambuf.

5.365.4.10 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf<_CharT, _Traits>::gptr () const
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 463 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.4.11 `template<typename _CharT, typename _Traits> void
std::basic_filebuf< _CharT, _Traits >::imbue (const locale &)
[protected, virtual]`

Changes translations.

Parameters

loc A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 912 of file fstream.tcc.

References `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_next`, `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::basic_filebuf< _CharT, _Traits >::_M_reading`, `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::ios_base::cur`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::basic_filebuf< _CharT, _Traits >::is_open()`.

5.365.4.12 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::in_avail ()
[inline, inherited]`

Looking ahead into the stream.

Definition at line 94 of file fstream.tcc.

References std::basic_filebuf< _CharT, _Traits >::_M_mode, std::basic_filebuf< _CharT, _Traits >::_M_reading, std::basic_filebuf< _CharT, _Traits >::_M_set_buffer(), std::ios_base::ate, std::basic_filebuf< _CharT, _Traits >::close(), std::ios_base::end, and std::basic_filebuf< _CharT, _Traits >::is_open().

5.365.4.15 `template<typename _CharT, typename _Traits> __filebuf_type*
std::basic_filebuf< _CharT, _Traits >::open (const std::string &
__s, ios_base::openmode __mode) [inline]`

Opens an external file.

Parameters

- s* The name of the file.
- mode* The open mode flags.

Returns

this on success, NULL on failure

Definition at line 275 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::open().

5.365.4.16 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf< _CharT, _Traits >::overflow (int_type =
traits_type::eof()) [inline, protected, virtual,
inherited]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

- c* An additional character to consume.

Returns

eof() to indicate failure, something else (usually *c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not eof().

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in [__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>](#).

Definition at line 746 of file streambuf.

Referenced by [std::basic_streambuf<_CharT, _Traits>::xsputn\(\)](#).

5.365.4.17 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf<_CharT, _Traits>::pbackfail (int_type =
traits_type::eof()) [inline, protected, virtual,
inherited]`

Tries to back up the input sequence.

Parameters

c The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of [gptr\(\)](#), [eback\(\)](#), and [pptr\(\)](#) are the same as for [underflow\(\)](#).

Note

Base class version does nothing, returns eof().

Reimplemented in [__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>](#).

Definition at line 702 of file streambuf.

5.365.4.18 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf<_CharT, _Traits>::pbase () const
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 507 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::sync().

5.365.4.19 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::pbump (int __n)
[inline, protected, inherited]`

Moving the write position.

Parameters

- n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 523 of file streambuf.

Referenced by std::basic_streambuf< _CharT, _Traits >::xsputn().

5.365.4.20 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::pptr () const
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 510 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::sync(), and std::basic_streambuf< _CharT, _Traits >::xsputn().

5.365.4.21 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale
& __loc) [inline, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 205 of file `streambuf`.

5.365.4.22 `template<typename _CharT, typename _Traits> pos_type
std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type
__off, ios_base::seekdir __way, ios_base::openmode __mode =
ios_base::in | ios_base::out) [inline, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 239 of file `streambuf`.

5.365.4.23 `template<typename _CharT, typename _Traits> pos_type
std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out)
[inline, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 244 of file streambuf.

5.365.4.24 `template<typename _CharT, typename _Traits>
__streambuf_type* std::basic_streambuf< _CharT, _Traits
>::pubsetbuf(char_type * __s, streamsize __n) [inline,
inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 235 of file streambuf.

5.365.4.25 `template<typename _CharT, typename _Traits> int
std::basic_streambuf< _CharT, _Traits >::pubsync ()
[inline, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 249 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::sync()`.

5.365.4.26 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline,
inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 294 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::istreambuf_iterator< _CharT, _Traits >::operator++()`.

5.365.4.27 `template<typename _CharT, typename _Traits> virtual
pos_type std::basic_streambuf< _CharT, _Traits >::seekoff
(off_type, ios_base::seekdir, ios_base::openmode =
ios_base::in | ios_base::out) [inline, protected,
virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 580 of file `streambuf`.

5.365.4.28 `template<typename _CharT, typename _Traits> virtual pos_type
std::basic_streambuf< _CharT, _Traits >::seekpos(pos_type,
ios_base::openmode = ios_base::in | ios_base::out) [inline,
protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 592 of file `streambuf`.

5.365.4.29 `template<typename _CharT, typename _Traits> virtual
basic_streambuf<char_type,_Traits>* std::basic_streambuf<
_CharT,_Traits >::setbuf(char_type*, streamsize) [inline,
protected, virtual, inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

Note

Base class version does nothing, returns `this`.

Definition at line 569 of file `streambuf`.

```
5.365.4.30 template<typename _CharT, typename _Traits > basic_filebuf<
    _CharT, _Traits >::__streambuf_type * std::basic_filebuf<
    _CharT, _Traits >::setbuf ( char_type * __s, streamsize __n )
    [protected, virtual]
```

Manipulates the buffer.

Parameters

s Pointer to a buffer area.

n Size of *s*.

Returns

`this`

If no file has been opened, and both *s* and *n* are zero, then the stream becomes unbuffered. Otherwise, *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Definition at line 686 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::_M_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_buf_size`, and `std::basic_filebuf< _CharT, _Traits >::is_open()`.

```
5.365.4.31 template<typename _CharT, typename _Traits> void
    std::basic_streambuf< _CharT, _Traits >::setg ( char_type *
    __gbeg, char_type * __gnext, char_type * __gend ) [inline,
    protected, inherited]
```

Setting the three read area pointers.

Parameters

gbeg A pointer.

gnext A pointer.

gend A pointer.

Postcondition

gbeg == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 487 of file streambuf.

5.365.4.32 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::setp (char_type
* __pbeg, char_type * __pend) [inline, protected,
inherited]`

Setting the three write area pointers.

Parameters

pbeg A pointer.

pend A pointer.

Postcondition

pbeg == `pbase()`, *pbeg* == `pptr()`, and *pend* == `pptr()`

Definition at line 533 of file streambuf.

5.365.4.33 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sgetc () [inline,
inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

5.365.4.34 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s,
streamsize __n) [inline, inherited]`

Entry point for xsgetn.

Parameters

s A buffer area.

n A count.

Returns xsgetn(s,n). The effect is to fill s[0] through s[n-1] with characters from the input sequence, if possible.

Definition at line 335 of file streambuf.

5.365.4.35 `template<typename _CharT , typename _Traits > streamsize
std::basic_filebuf< _CharT, _Traits >::showmanyc ()
[protected, virtual]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to [underflow\(\)](#) will not return traits::eof() until at least that number of characters have been supplied. If [showmanyc\(\)](#) returns -1, then calls to [underflow\(\)](#) or [uflow\(\)](#) will fail.
[27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return eof() but that they will return immediately.*

The standard adds that *the morphemes of showmanyc are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 178 of file fstream.tcc.

References [std::basic_filebuf< _CharT, _Traits >::M_mode](#), [std::ios_base::binary](#), [std::basic_streambuf< _CharT, _Traits >::egptr\(\)](#), [std::basic_streambuf< _CharT, _Traits >::gpptr\(\)](#), [std::ios_base::in](#), and [std::basic_filebuf< _CharT, _Traits >::is_open\(\)](#).

5.365.4.36 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::snextc () [inline,
inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 276 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

5.365.4.37 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type
__c) [inline, inherited]`

Pushing characters back into the input stream.

Parameters

c The character to push back.

Returns

The previous character, if possible.

Similar to `sungetc()`, but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 350 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

5.365.4.38 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c)
[inline, inherited]`

Entry point for all single-character output functions.

Parameters

c A character to output.

Returns

`c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `c` in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

5.365.4.39 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf<_CharT, _Traits>::sputn (const char_type
* __s, streamsize __n) [inline, inherited]`

Entry point for all single-character output functions.

Parameters

`s` A buffer read area.

`n` A count.

One of two public output functions.

Returns `xsputn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file `streambuf`.

5.365.4.40 `template<typename _CharT, typename _Traits> void
std::basic_streambuf<_CharT, _Traits>::stoss () [inline,
inherited]`

Tosses a character.

Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file `streambuf`.

5.365.4.41 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline,
inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns [pbackfail\(\)](#). The effect is to *unget* the last character *gotten*.

Definition at line 375 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::unget()`.

5.365.4.42 `template<typename _CharT , typename _Traits > int
std::basic_filebuf< _CharT, _Traits >::sync () [protected,
virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 895 of file fstream.tcc.

References `std::basic_streambuf< _CharT, _Traits >::pbase()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

5.365.4.43 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf< _CharT, _Traits >::uflow () [inline,
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 678 of file `streambuf`.

5.365.4.44 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::underflow() [protected, virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input `streambuf` can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 204 of file `fstream.tcc`.

References `std::basic_filebuf<_CharT, _Traits>::_M_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_buf_size`, `std::basic_filebuf<_CharT, _Traits>::_M_ext_next`, `std::basic_filebuf<_CharT, _Traits>::_M_mode`, `std::basic_filebuf<_CharT, _Traits>::_M_reading`, `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::in()`, `std::ios_base::in`, and `std::min()`.

5.365.4.45 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::xsgetn (char_type *
__s, streamsize __n) [protected, virtual, inherited]`

Multiple character extraction.

Parameters

- s* A buffer area.
- n* Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills *s*[0] through *s*[*n*-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 45 of file `streambuf.tcc`.

References `std::min()`.

5.365.4.46 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::xspn (const
char_type * __s, streamsize __n) [protected, virtual,
inherited]`

Multiple character insertion.

Parameters

- s* A buffer area.
- n* Maximum number of characters to write.

Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#).

Definition at line 79 of file `streambuf.tcc`.

References `std::basic_streambuf< _CharT, _Traits >::epptr()`, `std::min()`, `std::basic_streambuf< _CharT, _Traits >::overflow()`, `std::basic_streambuf< _CharT, _Traits >::pbump()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

5.365.5 Member Data Documentation

5.365.5.1 `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf` [protected]

Pointer to the beginning of internal buffer.

Definition at line 109 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::setbuf()`.

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to [egptr\(\)](#).

Definition at line 163 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.5.7 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 180 of file `streambuf`.

5.365.5.8 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_in_cur
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 181 of file `streambuf`.

5.365.5.9 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_in_end
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 182 of file `streambuf`.

5.365.5.10 `template<typename _CharT, typename _Traits>
ios_base::openmode std::basic_filebuf< _CharT, _Traits
>::_M_mode [protected]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 94 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.365.5.11 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_out_beg
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

5.365.5.12 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_out_cur
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 184 of file `streambuf`.

5.365.5.13 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_out_end
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 185 of file streambuf.

5.365.5.14 `template<typename _CharT, typename _Traits> char_type
std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]`

Necessary bits for putback buffer management.

Note

 pbacks of over one character are not currently supported.

Definition at line 137 of file fstream.

5.365.5.15 `template<typename _CharT, typename _Traits> char_type*
std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save
[protected]`

Necessary bits for putback buffer management.

Note

 pbacks of over one character are not currently supported.

Definition at line 138 of file fstream.

5.365.5.16 `template<typename _CharT, typename _Traits> char_type*
std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save
[protected]`

Necessary bits for putback buffer management.

Note

 pbacks of over one character are not currently supported.

Definition at line 139 of file fstream.

5.365.5.17 `template<typename _CharT, typename _Traits> bool
std::basic_filebuf< _CharT, _Traits >::_M_pback_init
[protected]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 140 of file fstream.

```
5.365.5.18  template<typename _CharT, typename _Traits> bool
             std::basic_filebuf< _CharT, _Traits >::_M_reading
             [protected]
```

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 128 of file fstream.

Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type [std::basic_istream::sentry](#) with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, [ios_base::badbit](#) will be turned on in the stream's error state without causing an [ios_base::failure](#) to be thrown. The original exception will then be rethrown.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

5.366.1 Detailed Description

template<typename _CharT, typename _Traits> class std::basic_fstream< _CharT, _Traits >

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_filebuf](#) is used, which this page refers to as `sb`.

Definition at line 759 of file fstream.

5.366.2 Member Typedef Documentation

5.366.2.1 `template<typename _CharT, typename _Traits> typedef
 ctype<_CharT> std::basic_istream< _CharT, _Traits
 >::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 71 of file istream.

5.366.2.2 `template<typename _CharT, typename _Traits> typedef
 ctype<_CharT> std::basic_ostream< _CharT, _Traits
 >::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 71 of file ostream.

5.366.2.3 `template<typename _CharT, typename _Traits> typedef
 num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
 > std::basic_istream< _CharT, _Traits >::__num_get_type
 [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 70 of file istream.

5.366.2.4 `template<typename _CharT, typename _Traits> typedef
 num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
 > std::basic_ostream< _CharT, _Traits >::__num_put_type
 [inherited]`

These are non-standard types.

Reimplemented in [std::basic_ostream< _CharT, _Traits >](#), [std::basic_ostream< char, _Traits >](#), and [std::basic_ostream< char >](#).

Definition at line 84 of file basic_ios.h.

5.366.2.5 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ostream<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file ostream.

5.366.2.6 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_istream<_CharT, _Traits>::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istream<_CharT, _Traits, _Alloc>](#).

Definition at line 59 of file istream.

5.366.2.7 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_fstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream<_CharT, _Traits>](#).

Definition at line 763 of file fstream.

5.366.2.8 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)
[inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the [ios_base](#) object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios_base](#) and [basic_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 435 of file [ios_base.h](#).

5.366.2.9 typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *fmtflags* are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file [ios_base.h](#).

5.366.2.10 `template<typename _CharT, typename _Traits> typedef
_Traits::int_type std::basic_istream< _CharT, _Traits >::int_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istringstream< _CharT, _Traits, _Alloc >](#).

Definition at line 60 of file istream.

5.366.2.11 `template<typename _CharT , typename _Traits > typedef
traits_type::int_type std::basic_fstream< _CharT, _Traits
>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream< _CharT, _Traits >](#).

Definition at line 765 of file fstream.

5.366.2.12 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file ios_base.h.

5.366.2.13 `template<typename _CharT, typename _Traits> typedef
_Traits::off_type std::basic_istream< _CharT, _Traits >::off_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 62 of file `istream`.

5.366.2.14 `template<typename _CharT , typename _Traits > typedef
traits_type::off_type std::basic_fstream< _CharT, _Traits
>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream< _CharT, _Traits >](#).

Definition at line 767 of file `fstream`.

5.366.2.15 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.366.2.16 `template<typename _CharT , typename _Traits > typedef
traits_type::pos_type std::basic_fstream< _CharT, _Traits
>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 766 of file `fstream`.

5.366.2.17 `template<typename _CharT, typename _Traits> typedef
_Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istringstream< _CharT, _Traits, _Alloc >](#).

Definition at line 61 of file `istream`.

5.366.2.18 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file `ios_base.h`.

5.366.2.19 `template<typename _CharT , typename _Traits > typedef _Traits
std::basic_fstream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream< _CharT, _Traits >](#).

Definition at line 764 of file `fstream`.

5.366.2.20 `template<typename _CharT, typename _Traits> typedef`
`_Traits std::basic_istream< _CharT, _Traits >::traits_type`
`[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 63 of file `istream`.

5.366.3 Member Enumeration Documentation

5.366.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.366.4 Constructor & Destructor Documentation

5.366.4.1 `template<typename _CharT , typename _Traits >`
`std::basic_fstream< _CharT, _Traits >::basic_fstream ()`
`[inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 786 of file `fstream`.

5.366.4.2 `template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream (const char *
__s, ios_base::openmode __mode = ios_base::in | ios_base::out)
[inline, explicit]`

Create an input/output file stream.

Parameters

s Null terminated string specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 799 of file `fstream`.

5.366.4.3 `template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream
(const std::string & __s, ios_base::openmode __mode =
ios_base::in | ios_base::out) [inline, explicit]`

Create an input/output file stream.

Parameters

s Null terminated string specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

Definition at line 814 of file `fstream`.

5.366.4.4 `template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::~~basic_fstream ()
[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 829 of file `fstream`.

5.366.5 Member Function Documentation

5.366.5.1 `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

5.366.5.2 `template<typename _CharT, typename _Traits> void std::basic_ostream< _CharT, _Traits >::_M_write (const char_type * __s, streamsize __n) [inline, inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

5.366.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file basic_ios.h.

5.366.5.4 `template<typename _CharT , typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file basic_ios.tcc.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.366.5.5 `template<typename _CharT , typename _Traits > void
std::basic_fstream< _CharT, _Traits >::close () [inline]`

Close the file.

Calls [std::basic_filebuf::close\(\)](#). If that function fails, failbit is set in the stream's error state.

Definition at line 909 of file fstream.

5.366.5.6 `template<typename _CharT , typename _Traits > basic_ios<
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

5.366.5.7 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof() const [inline, inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.366.5.8 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions() const [inline, inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.366.5.9 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.366.5.10 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::fail () const [inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

5.366.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file basic_ios.h.

5.366.5.12 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill () const [inline,
inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

5.366.5.13 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.366.5.14 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.366.5.15 `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::flush () [inherited]`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf ()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::flush()`.

5.366.5.16 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::gcount () const
[inline, inherited]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

5.366.5.17 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits
>::get (void) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.18 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
char_type & __c) [inherited]`

Simple extraction.

Parameters

`c` The character in which to store data.

Returns

`*this`

Tries to extract a character and store it in `c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.19 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::get (char_type * __s, streamsize __n, char_type __delim)`
[*inherited*]

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

delim A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.366.5.20 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb, char_type __delim) [inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

5.366.5.21 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

Returns

*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file `istream`.

5.366.5.22 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb,widen('\n'))`.

Definition at line 366 of file `istream`.

5.366.5.23 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

Parameters

s A character array in which to store the data.

n Maximum number of characters to extract.

Returns

*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream< char >::getline()`.

5.366.5.24 `template<typename _CharT, typename _Traits > basic_istream<
 _CharT, _Traits > & std::basic_istream< _CharT, _Traits
 >::getline (char_type * __s, streamsize __n, char_type __delim)
 [inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.366.5.25 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.366.5.26 `template<typename _CharT, typename _Traits> bool
std::basic_ios<_CharT, _Traits>::good() const [inline,
inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.366.5.27 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore
(void) [inherited]`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `n != std::numeric_limits<int>::max()`, `n` characters are extracted

- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.28 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::ignore (streamsize __n) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 493 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.366.5.29 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::ignore (streamsize __n, int_type __delim) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 555 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sputc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.366.5.30 `template<typename _CharT, typename _Traits> locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)
[inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from [std::ios_base](#).

Definition at line 113 of file basic_ios.tcc.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

5.366.5.31 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.366.5.32 `template<typename _CharT, typename _Traits> bool
std::basic_fstream< _CharT, _Traits >::is_open () [inline]`

Wrapper to test for an open file.

Returns

`rdbuf() -> is_open()`

Definition at line 848 of file fstream.

5.366.5.33 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.366.5.34 `template<typename _CharT, typename _Traits> char
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

`c` The character to narrow.

`dfault` The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c, default)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

5.366.5.35 `template<typename _CharT, typename _Traits> void
std::basic_fstream<_CharT, _Traits>::open (const char * __s,
ios_base::openmode __mode = ios_base::in | ios_base::out)
[inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s, mode)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 869 of file `fstream`.

5.366.5.36 `template<typename _CharT, typename _Traits> void
std::basic_fstream<_CharT, _Traits>::open (const std::string &
__s, ios_base::openmode __mode = ios_base::in | ios_base::out)
[inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s, mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 890 of file `fstream`.

5.366.5.37 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.366.5.38 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::operator! () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.366.5.39 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (unsigned long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 169 of file `ostream`.

5.366.5.40 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<< (unsigned short __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.366.5.41 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (double __f
) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 209 of file ostream.

5.366.5.42 `template<typename _CharT , typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits
>::operator<< (short __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 221 of file ostream.

5.366.5.51 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (const void *
__p) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 225 of file ostream.

5.366.5.52 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<(int __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.366.5.53 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<(long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 200 of file ostream.

5.366.5.54 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 204 of file ostream.

5.366.5.55 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]`

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.56 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

5.366.5.57 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (unsigned long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 189 of file `istream`.

5.366.5.58 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (long long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 194 of file istream.

5.366.5.59 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 198 of file istream.

5.366.5.60 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 114 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.67 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.68 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `ioanip` header.

Definition at line 120 of file istream.

5.366.5.69 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned short & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 174 of file istream.

5.366.5.70 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 185 of file istream.

5.366.5.71 `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (int & __n) [inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 159 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.72 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (void *& __p) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 215 of file `istream`.

5.366.5.73 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (void) [inherited]`

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.74 streamsize std::ios_base::precision () const [inline, inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

5.366.5.75 streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file ios_base.h.

5.366.5.76 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.366.5.77 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c) [inherited]`

Unextracting a single character.

Parameters

`c` The character to push back into the input stream.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

5.366.5.78 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.366.5.79 `template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file basic_ios.tcc.

References `std::basic_ios< _CharT, _Traits >::clear()`.

5.366.5.80 `template<typename _CharT, typename _Traits > __filebuf_type* std::basic_fstream< _CharT, _Traits >::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current [basic_filebuf](#) buffer.

This hides both signatures of [std::basic_ios::rdbuf\(\)](#).

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 840 of file `fstream`.

5.366.5.81 `template<typename _CharT, typename _Traits> iostate
std::basic_ios<_CharT, _Traits>::rdstate() const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See [std::ios_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

5.366.5.82 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read(
char_type * __s, streamsize __n) [inherited]`

Extraction without delimiters.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rddbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.366.5.83 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::readsome (char_type *
__s, streamsize __n) [inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rddbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.366.5.84 `void std::ios_base::register_callback (event_callback __fn, int
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

- __fn* The function to add.
- __index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.366.5.85 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current read position.

Parameters

- off* A file offset object.
- dir* The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.86 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (pos_type __pos) [inherited]`

Changing the current read position.

Parameters

- pos* A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.87 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp(pos_type __pos) [inherited]`

Changing the current write position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.88 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current write position.

Parameters

off A file offset object.
dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.366.5.89 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.366.5.90 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is [ios_base::adjustfield](#).

Definition at line 594 of file ios_base.h.

5.366.5.91 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file basic_ios.h.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.366.5.92 `template<typename _CharT , typename _Traits > int
std::basic_istream< _CharT, _Traits >::sync (void)
[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.366.5.93 `static bool std::ios_base::sync_with_stdio (bool __sync = true)`
[static, inherited]

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.366.5.94 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (void)` **[inherited]**

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.366.5.95 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp() [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.366.5.96 `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.366.5.97 `template<typename _CharT, typename _Traits>
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie (basic_ostream<_CharT, _Traits> * __tistr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tistr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

5.366.5.98 `template<typename _CharT, typename _Traits> basic_istream<
 _CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ungetc (void) [inherited]`

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

5.366.5.99 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

5.366.5.100 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::widen (char __c) const
[inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()) .widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file basic_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

5.366.5.101 `streamsize std::ios_base::width (streamsize __wide) [inline,
inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file ios_base.h.

5.366.5.102 `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

5.366.5.103 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::write (const char_type * __s, streamsize __n) [inherited]`

Character string insertion.

Parameters

s The array to insert.

n Maximum number of characters to insert.

Returns

*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed `char` and unsigned `char`.

5.366.5.104 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.366.6 Member Data Documentation

5.366.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.366.6.2 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.366.6.3 `const openmode std::ios_base::app [static, inherited]`

Seek to end before each write.

Definition at line 363 of file `ios_base.h`.

5.366.6.4 const openmode std::ios_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 366 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.366.6.5 const iostate std::ios_base::badbit [static, inherited]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 333 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_istream< _CharT, _Traits >::unget().

5.366.6.6 const fmtflags std::ios_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 312 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.366.6.7 const seekdir std::ios_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file ios_base.h.

5.366.6.8 const openmode std::ios_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see ///

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

5.366.6.9 const fmtflags std::ios_base::boolalpha [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::num_put< _CharT, _OutIter >::do_put().

5.366.6.10 const seekdir std::ios_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.366.6.11 const fmtflags std::ios_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.366.6.12 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.366.6.13 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter

>::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.366.6.14 `const iostate std::ios_base::failbit` [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.366.6.15 `const fmtflags std::ios_base::fixed` [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.366.6.16 `const fmtflags std::ios_base::floatfield` [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 315 of file ios_base.h.

5.366.6.17 `const iostate std::ios_base::goodbit` [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),

std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.366.6.18 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.366.6.19 const openmode std::ios_base::in [static, inherited]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.366.6.20 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.366.6.21 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.366.6.22 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.366.6.23 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.366.6.24 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.366.6.25 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.366.6.26 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.366.6.27 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.366.6.28 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.366.6.29 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.366.6.30 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for ofstream.

Definition at line 380 of file ios_base.h.

5.366.6.31 const fmtflags std::ios_base::unitbuf [static, inherited]

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.366.6.32 const fmtflags std::ios_base::uppercase [static, inherited]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

The documentation for this class was generated from the following file:

- [fstream](#)

5.367 std::basic_ifstream< _CharT, _Traits > Class Template Reference

Controlling input for files.

This class supports reading from named files, using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_filebuf](#) is used, which this page refers to as `sb`.

Inheritance diagram for `std::basic_ifstream< _CharT, _Traits >`:

Public Types

- typedef `ctype< _CharT > __ctype_type`
- typedef `basic_filebuf< char_type, traits_type > __filebuf_type`
- typedef `basic_ios< _CharT, _Traits > __ios_type`
- typedef `basic_istream< char_type, traits_type > __istream_type`
- typedef `num_get< _CharT, istreambuf_iterator< _CharT, _Traits > > __num_get_type`

Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several

effects, concluding with the setting of a status flag; see the [sentry documentation](#) for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, [`ios_base::badbit`](#) will be turned on in the stream's error state without causing an [`ios_base::failure`](#) to be thrown. The original exception will then be rethrown.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type [`std::basic_ifstream::sentry`](#) with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the [sentry documentation](#) for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by [`gcount\(\)`](#).

If an exception is thrown during extraction, [`ios_base::badbit`](#) will be turned on in the stream's error state without causing an [`ios_base::failure`](#) to be thrown. The original exception will then be rethrown.

- class `sentry`

5.367.1 Detailed Description

template<typename _CharT, typename _Traits> class std::basic_ifstream< _CharT, _Traits >

Controlling input for files.

This class supports reading from named files, using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_filebuf](#) is used, which this page refers to as `sb`.

Definition at line 418 of file `fstream`.

5.367.2 Member Typedef Documentation

5.367.2.1 **template<typename _CharT, typename _Traits> typedef**
c_type<_CharT> std::basic_istream< _CharT, _Traits
>::__c_type_type [inherited]

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 71 of file `istream`.

5.367.2.2 **template<typename _CharT, typename _Traits> typedef**
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_istream< _CharT, _Traits >::__num_get_type
[inherited]

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 70 of file `istream`.

5.367.2.3 `template<typename _CharT, typename _Traits> typedef
 num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
 > std::basic_ios<_CharT, _Traits>::__num_put_type
 [inherited]`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 84 of file `basic_ios.h`.

5.367.2.4 `template<typename _CharT, typename _Traits> typedef _CharT
 std::basic_ifstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 422 of file `fstream`.

5.367.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)
 [inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the `ios_base` object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.367.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 254 of file ios_base.h.

5.367.2.7 `template<typename _CharT , typename _Traits > typedef
traits_type::int_type std::basic_ifstream< _CharT, _Traits
>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 424 of file fstream.

5.367.2.8 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.367.2.9 `template<typename _CharT, typename _Traits> typedef traits_type::off_type std::basic_ifstream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 426 of file `fstream`.

5.367.2.10 `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.367.2.11 `template<typename _CharT , typename _Traits > typedef traits_type::pos_type std::basic_ifstream< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 425 of file `fstream`.

5.367.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file `ios_base.h`.

5.367.2.13 `template<typename _CharT , typename _Traits > typedef _Traits std::basic_ifstream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 423 of file `fstream`.

5.367.3 Member Enumeration Documentation

5.367.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.367.4 Constructor & Destructor Documentation

5.367.4.1 `template<typename _CharT, typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream ()
[inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 444 of file `fstream`.

5.367.4.2 `template<typename _CharT, typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (const char
* __s, ios_base::openmode __mode = ios_base::in) [inline,
explicit]`

Create an input file stream.

Parameters

s Null terminated string specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

[ios_base::in](#) is automatically included in *mode*.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 458 of file `fstream`.

5.367.4.3 `template<typename _CharT, typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (const
std::string & __s, ios_base::openmode __mode = ios_base::in)
[inline, explicit]`

Create an input file stream.

Parameters

s `std::string` specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

[ios_base::in](#) is automatically included in *mode*.

Definition at line 474 of file `fstream`.

5.367.4.4 `template<typename _CharT, typename _Traits >
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream ()
[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 489 of file fstream.

5.367.5 Member Function Documentation

5.367.5.1 `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios_base.h.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.367.5.2 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file basic_ios.h.

5.367.5.3 `template<typename _CharT , typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.367.5.4 `template<typename _CharT , typename _Traits > void
std::basic_ifstream< _CharT, _Traits >::close () [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 567 of file `fstream`.

5.367.5.5 `template<typename _CharT , typename _Traits > basic_ios<
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

5.367.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof() const [inline, inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.367.5.7 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions() const [inline, inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.367.5.8 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions(iostate __except) [inline, inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.367.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::fail() const` [`inline`, `inherited`]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.367.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits >::fill(char_type __ch)` [`inline`, `inherited`]

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.367.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill () const [inline,
inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.367.5.12 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file `ios_base.h`.

5.367.5.13 fmtflags std::ios_base::flags () const [inline, inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), and std::operator>>().

5.367.5.14 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline, inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

5.367.5.15 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.367.5.16 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (char_type & __c) [inherited]`

Simple extraction.

Parameters

c The character in which to store data.

Returns

*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.367.5.17 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (char_type * __s, streamsize __n, char_type __delim) [inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

delim A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored

- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_ifstream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

5.367.5.18 `template<typename _CharT , typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::get (__streambuf_type & __sb, char_type __delim) [inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

5.367.5.19 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get (char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

Returns

*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file istream.

5.367.5.20 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get (__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb,widen('\n'))`.

Definition at line 366 of file istream.

5.367.5.21 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

Returns

*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file istream.

Referenced by `std::basic_istream<char>::getline()`.

5.367.5.22 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n, char_type __delim) [inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored

3. $n-1$ characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sputc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.367.5.23 locale `std::ios_base::getloc () const` [inline, inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.367.5.24 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good () const` [inline, inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file basic_ios.h.

5.367.5.25 `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::ignore(void) [inherited]`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_ifstream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.367.5.26 `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::ignore(streamsize __n) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.367.5.27 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n, int_type __delim) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.367.5.28 `template<typename _CharT, typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

5.367 std::basic_ifstream< _CharT, _Traits > Class Template Reference 1647

Reimplemented from [std::ios_base](#).

Definition at line 113 of file basic_ios.tcc.

References [std::ios_base::getloc\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

Referenced by [std::operator<<\(\)](#).

5.367.5.29 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic_ios.tcc.

References [std::ios_base::badbit](#), and [std::ios_base::goodbit](#).

5.367.5.30 `template<typename _CharT , typename _Traits > bool
std::basic_ifstream< _CharT, _Traits >::is_open () [inline]`

Wrapper to test for an open file.

Returns

`rdbuf() -> is_open()`

Definition at line 508 of file fstream.

5.367.5.31 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.367.5.32 `template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

5.367.5.33 `template<typename _CharT , typename _Traits > void
std::basic_ifstream<_CharT, _Traits>::open (const std::string &
__s, ios_base::openmode __mode = ios_base::in) [inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s, mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 549 of file `fstream`.

5.367.5.34 `template<typename _CharT, typename _Traits> void
std::basic_ifstream<_CharT, _Traits>::open (const char * __s,
ios_base::openmode __mode = ios_base::in) [inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s,mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 529 of file `fstream`.

5.367.5.35 `template<typename _CharT, typename _Traits> std::basic_ios<
_CharT, _Traits>::operator void * () const [inline,

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 167 of file istream.

```
5.367.5.44  template<typename _CharT, typename _Traits> __istream_type&
             std::basic_istream< _CharT, _Traits >::operator>> ( long double
             & __f ) [inline, inherited]
```

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 211 of file istream.

```
5.367.5.45  template<typename _CharT , typename _Traits > basic_istream<
             _CharT, _Traits > & std::basic_istream< _CharT, _Traits
             >::operator>> ( short & __n ) [inherited]
```

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 114 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::setstate().

5.367.5.46 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_ifstream< _CharT, _Traits >::operator>> (void *& __p
) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 215 of file istream.

5.367.5.47 `template<typename _CharT , typename _Traits > basic_ifstream<
_CharT, _Traits > & std::basic_ifstream< _CharT, _Traits
>::operator>> (__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.367.5.48 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned short & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 174 of file istream.

5.367.5.49 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 198 of file istream.

5.367.5.50 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (int & __n) [inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 159 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.367.5.51 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 181 of file `istream`.

5.367.5.52 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(&)(__istream_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

Definition at line 120 of file `istream`.

```
5.367.5.53  template<typename _CharT, typename _Traits> __istream_type&
             std::basic_istream< _CharT, _Traits >::operator>> ( long & __n
             ) [inline, inherited]
```

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 185 of file `istream`.

```
5.367.5.54  template<typename _CharT , typename _Traits > basic_istream<
             _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits
             >::peek ( void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.367.5.55  streamsize std::ios_base::precision ( streamsize __prec )
             [inline, inherited]
```

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file ios_base.h.

5.367.5.56 `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

5.367.5.57 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (char_type __c) [inherited]`

Unextracting a single character.

Parameters

c The character to push back into the input stream.

Returns

*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets badbit in the error state.

Note

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

5.367.5.58 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

5.367.5.59 `template<typename _CharT, typename _Traits > __filebuf_type* std::basic_ifstream< _CharT, _Traits >::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 500 of file `fstream`.

5.367.5.60 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.367.5.61 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate () const [inline, inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.367.5.62 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read (char_type * __s, streamsize __n) [inherited]`

Extraction without delimiters.

Parameters

- s* A character array.
- n* Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.367.5.63 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream<_CharT, _Traits>::readsome (char_type *
__s, streamsize __n) [inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

- s* A character array.
- n* Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called *A* here:

- if *A* == -1, sets `eofbit` and extracts no characters
- if *A* == 0, extracts no characters

- if $A > 0$, extracts $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_ifstream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.367.5.64 void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn The function to add.

__index The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.367.5.65 template<typename _CharT , typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::seekg (pos_type __pos) [inherited]

Changing the current read position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.367.5.66 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current read position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff (off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.367.5.67 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by std::boolalpha(), std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

5.367.5.68 fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is [ios_base::adjustfield](#).

Definition at line 594 of file ios_base.h.

5.367.5.69 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(),

`std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.367.5.70 `template<typename _CharT, typename _Traits> int
std::basic_istream< _CharT, _Traits >::sync (void)
[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.367.5.71 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.367.5.72 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg(void) [inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rddbuf()`.

5.367.5.73 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.367.5.74 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits
>::tie (basic_ostream<_CharT, _Traits> * __tistr) [inline,
inherited]`

Ties this stream to an output stream.

Parameters

tistr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

5.367.5.75 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget
(void) [inherited]`

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

5.367.5.76 `void std::ios_base::unsetf (fmtflags __mask) [inline,
inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

5.367.5.77 `template<typename _CharT, typename _Traits> char_type
std::basic_ios<_CharT, _Traits>::widen (char __c) const
[inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file basic_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

5.367.5.78 `streamsize std::ios_base::width () const [inline,
inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file ios_base.h.

Referenced by std::basic_ios<_CharT, _Traits>::copyfmt(), std::num_put<_CharT, _OutIter>::do_put(), and std::operator>>().

5.367.5.79 `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of [width\(\)](#).

Definition at line 652 of file `ios_base.h`.

5.367.5.80 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.367.6 Member Data Documentation

5.367.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.367.6.2 `const fmtflags std::ios_base::adjustfield` [static, inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.367.6.3 `const openmode std::ios_base::app` [static, inherited]

Seek to end before each write.

Definition at line 363 of file `ios_base.h`.

5.367.6.4 `const openmode std::ios_base::ate` [static, inherited]

Open and seek to end immediately after opening.

Definition at line 366 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

5.367.6.5 `const iostate std::ios_base::badbit` [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 333 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.367.6.6 `const fmtflags std::ios_base::basefield` [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.367.6.7 `const seekdir std::ios_base::beg` **[static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 395 of file `ios_base.h`.

5.367.6.8 `const openmode std::ios_base::binary` **[static, inherited]**

Perform input and output in binary mode (as opposed to text mode). `/// This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.`

Definition at line 371 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

5.367.6.9 `const fmtflags std::ios_base::boolalpha` **[static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

5.367.6.10 `const seekdir std::ios_base::cur` **[static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 398 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.367.6.11 `const fmtflags std::ios_base::dec` **[static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file `ios_base.h`.

5.367.6.12 `const seekdir std::ios_base::end` **[static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.367.6.13 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.367.6.14 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.367.6.15 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.367.6.16 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 315 of file ios_base.h.

5.367.6.17 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.367.6.18 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.367.6.19 const openmode std::ios_base::in [static, inherited]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.367.6.20 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.367.6.21 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.367.6.22 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.367.6.23 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.367.6.24 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.367.6.25 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.367.6.26 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.367.6.27 `const fmtflags std::ios_base::showpoint` `[static, inherited]`

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file `ios_base.h`.

5.367.6.28 `const fmtflags std::ios_base::showpos` `[static, inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file `ios_base.h`.

5.367.6.29 `const fmtflags std::ios_base::skipws` `[static, inherited]`

Skips leading white space before certain input operations.

Definition at line 299 of file `ios_base.h`.

5.367.6.30 `const openmode std::ios_base::trunc` `[static, inherited]`

Open for input. Default for `ofstream`.

Definition at line 380 of file `ios_base.h`.

5.367.6.31 `const fmtflags std::ios_base::unitbuf` `[static, inherited]`

Flushes output after each output operation.

Definition at line 302 of file `ios_base.h`.

5.367.6.32 `const fmtflags std::ios_base::uppercase` `[static, inherited]`

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

The documentation for this class was generated from the following file:

5.368 std::basic_ios< _CharT, _Traits > Class Template Reference

Virtual base class for all stream classes.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Inheritance diagram for `std::basic_ios< _CharT, _Traits >`:

Public Types

- enum `event` { `erase_event`, `imbue_event`, `copyfmt_event` }
- typedef `void(* event_callback)(event, ios_base &, int)`
- typedef `_Ios_Fmtflags` `fmtflags`
- typedef `int` `io_state`
- typedef `_Ios_Iostate` `iostate`
- typedef `int` `open_mode`
- typedef `_Ios_Openmode` `openmode`
- typedef `int` `seek_dir`
- typedef `_Ios_Seekdir` `seekdir`
- typedef `std::streamoff` `streamoff`
- typedef `std::streampos` `streampos`
- typedef `_CharT` `char_type`
- typedef `_Traits::int_type` `int_type`
- typedef `_Traits::pos_type` `pos_type`

5.368.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_ios< _CharT,
_Traits >
```

Virtual base class for all stream classes.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Definition at line 62 of file `basic_ios.h`.

5.368.2 Member Typedef Documentation

5.368.2.1 `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ios<_CharT, _Traits>::__ctype_type`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 82 of file `basic_ios.h`.

5.368.2.2 `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_get_type`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits>`, `std::basic_istream<char, _Traits>`, and `std::basic_istream<char>`.

Definition at line 86 of file `basic_ios.h`.

5.368.2.3 `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_put_type`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 84 of file `basic_ios.h`.

5.368.2.4 `template<typename _CharT, typename _Traits> typedef _CharT std::basic_ios<_CharT, _Traits>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istream< char, _Traits >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 71 of file `basic_ios.h`.

5.368.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` **[inherited]**

The type of an event callback function.

Parameters

- event* One of the members of the event enum.
- ios_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.368.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`

- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file `ios_base.h`.

5.368.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_ios<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 72 of file `basic_ios.h`.

5.368.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 329 of file ios_base.h.

5.368.2.9 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, `std::basic_istream< char, _Traits >`, `std::basic_istream< char >`, `std::basic_iostream< char >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 74 of file basic_ios.h.

5.368.2.10 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 360 of file ios_base.h.

5.368.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, `std::basic_istream< char, _Traits >`, `std::basic_istream< char >`, `std::basic_iostream< char >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 73 of file `basic_ios.h`.

5.368.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file `ios_base.h`.

5.368.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostream< _CharT, _Traits >`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, `std::basic_istream< char, _Traits >`, `std::basic_istream< char >`, `std::basic_iostream< char >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 75 of file basic_ios.h.

5.368.3 Member Enumeration Documentation

5.368.3.1 enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during [imbue\(\)](#). copyfmt_event is used during copyfmt().

Definition at line 418 of file ios_base.h.

5.368.4 Constructor & Destructor Documentation

5.368.4.1 template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::basic_ios (basic_streambuf< _CharT, _Traits > * __sb) [inline, explicit]

Constructor performs initialization.

The parameter is passed by derived streams.

Definition at line 260 of file basic_ios.h.

5.368.4.2 template<typename _CharT, typename _Traits> virtual std::basic_ios< _CharT, _Traits >::~~basic_ios () [inline, virtual]

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by [rdbuf\(\)](#).

Definition at line 272 of file basic_ios.h.

5.368.4.3 template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::basic_ios () [inline, protected]

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 450 of file basic_ios.h.

5.368.5 Member Function Documentation

5.368.5.1 `const locale& std::ios_base::_M_getloc () const` [`inline`, `inherited`]

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.368.5.2 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const` [`inline`]

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

5.368.5.3 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.368.5.4 `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (const basic_ios<_CharT, _Traits> & __rhs)`

Copies fields of `__rhs` into this.

Parameters

`__rhs` The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

5.368.5.5 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

5.368.5.6 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::exceptions() const [inline]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.368.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions (iostate __except) [inline]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.368.5.8 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail () const [inline]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.368.5.9 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill () const [inline]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.368.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.368.5.11 fmtflags std::ios_base::flags () const [inline, inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), and std::operator>>().

5.368.5.12 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline, inherited]

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.368.5.13 locale std::ios_base::getloc () const [inline, inherited]

Locale access.

Returns

A copy of the current locale.

If imbue(loc) has previously been called, then this function returns loc. Otherwise, it returns a copy of std::locale(), the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Traits >::imbue(), std::operator>>(), and std::ws().

5.368.5.14 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::good () const [inline]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.368.5.15 `template<typename _CharT , typename _Traits > locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

5.368.5.16 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.368.5.17 long& std::ios_base::iword (int __ix) [inline, inherited]

Access to integer array.

Parameters

__ix Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file ios_base.h.

**5.368.5.18 template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline]**

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of *char_type* to a character of *char*, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file basic_ios.h.

5.368.5.19 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * () const [inline]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.368.5.20 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! () const [inline]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.368.5.21 `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

5.368.5.22 `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of `precision()`.

Definition at line 629 of file ios_base.h.

5.368.5.23 void*& std::ios_base::pword (int __ix) [inline, inherited]

Access to void pointer array.

Parameters

__ix Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.368.5.24 template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb)

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.368.5.25 `template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,
_Traits>::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 311 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

5.368.5.26 `template<typename _CharT, typename _Traits> iostate
std::basic_ios<_CharT, _Traits>::rdstate () const [inline]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.368.5.27 void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn The function to add.

__index The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.368.5.28 fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]

Setting new format flags.

Parameters

__fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by std::boolalpha(), std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

5.368.5.29 fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]

Setting new format flags.

Parameters

__fmtfl Additional flags to set.

__mask The flags mask for *__fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.368.5.30 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.368.5.31 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.368.5.32 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file basic_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.368.5.33 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tiestr) [inline]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file basic_ios.h.

5.368.5.34 `void std::ios_base::unsetf(fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

5.368.5.35 `template<typename _CharT, typename _Traits> char_type
std::basic_ios<_CharT, _Traits>::widen (char __c) const
[inline]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file basic_ios.h.

Referenced by std::endl(), std::getline(), and std::operator>>().

5.368.5.36 `streamsize std::ios_base::width () const [inline,
inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file ios_base.h.

Referenced by std::basic_ios<_CharT, _Traits>::copyfmt(), std::num_put<_CharT, _OutputIter>::do_put(), and std::operator>>().

5.368.5.37 streamsize std::ios_base::width (streamsize __wide) [inline, inherited]

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of [width\(\)](#).

Definition at line 652 of file ios_base.h.

5.368.5.38 static int std::ios_base::xalloc () throw () [static, inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.368.6 Member Data Documentation**5.368.6.1 const fmtflags std::ios_base::adjustfield [static, inherited]**

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 309 of file ios_base.h.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

5.368.6.2 const openmode std::ios_base::app [static, inherited]

Seek to end before each write.

Definition at line 363 of file ios_base.h.

5.368.6.3 const openmode std::ios_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 366 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.368.6.4 const iostate std::ios_base::badbit [static, inherited]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 333 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_istream< _CharT, _Traits >::unget().

5.368.6.5 const fmtflags std::ios_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 312 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.368.6.6 const seekdir std::ios_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file ios_base.h.

5.368.6.7 const openmode std::ios_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see ///

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

5.368.6.8 const fmtflags std::ios_base::boolalpha [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::num_put< _CharT, _OutIter >::do_put().

5.368.6.9 const seekdir std::ios_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.368.6.10 const fmtflags std::ios_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.368.6.11 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.368.6.12 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter

>::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.368.6.13 `const iostate std::ios_base::failbit` **[static, inherited]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.368.6.14 `const fmtflags std::ios_base::fixed` **[static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.368.6.15 `const fmtflags std::ios_base::floatfield` **[static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 315 of file ios_base.h.

5.368.6.16 `const iostate std::ios_base::goodbit` **[static, inherited]**

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),

5.368.6.17 `const fmtflags std::ios_base::hex` [**static, inherited**]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.368.6.18 `const openmode std::ios_base::in` [**static, inherited**]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.368.6.19 `const fmtflags std::ios_base::internal` [**static, inherited**]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 271 of file `ios_base.h`.

5.368.6.20 `const fmtflags std::ios_base::left` [**static, inherited**]

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.)

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.368.6.21 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.368.6.22 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.368.6.23 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.368.6.24 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.368.6.25 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.368.6.26 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.368.6.27 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.368.6.28 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.368.6.29 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for ostream.

Definition at line 380 of file ios_base.h.

5.368.6.30 const fmtflags std::ios_base::unitbuf [static, inherited]

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.368.6.31 const fmtflags std::ios_base::uppercase [static, inherited]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

The documentation for this class was generated from the following files:

- [basic_ios.h](#)
- [basic_ios.tcc](#)

5.369 std::basic_iostream< _CharT, _Traits > Class Template Reference

Merging istream and ostream capabilities.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Inheritance diagram for `std::basic_istream<_CharT, _Traits>`:

 - `__istream_type & operator>> (ios_base &(*__pf)(ios_base &))`

Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (bool & __n)`
- `__istream_type & operator>> (short & __n)`

- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`
- `__istream_type & operator>> (unsigned int &__n)`
- `__istream_type & operator>> (long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long long &__n)`

- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type * __sb)`

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`
- `__istream_type & get (char_type * __s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type * __s, streamsize __n)`

- `__ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))`
- `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

5.369.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_istream< _-
CharT, _Traits >
```

Merging istream and ostream capabilities.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Definition at line 769 of file istream.

5.369.2 Member Typedef Documentation

5.369.2.1 `template<typename _CharT, typename _Traits> typedef`
`ctype<_CharT> std::basic_istream< _CharT, _Traits`
`>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file istream.

5.369.2.2 `template<typename _CharT, typename _Traits> typedef`
`ctype<_CharT> std::basic_ostream< _CharT, _Traits`
`>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file ostream.

5.369.2.3 `template<typename _CharT, typename _Traits> typedef`
`num_get<_CharT, istreambuf_iterator<_CharT, _Traits>`
`> std::basic_istream< _CharT, _Traits >::__num_get_type`
`[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file istream.

5.369.2.4 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ostream<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file ostream.

5.369.2.5 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ios<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented in [std::basic_ostream<_CharT, _Traits>](#), [std::basic_ostream<char, _Traits>](#), and [std::basic_ostream<char>](#).

Definition at line 84 of file basic_ios.h.

5.369.2.6 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_istream<_CharT, _Traits>::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istreamstream<_CharT, _Traits, _Alloc>](#).

Definition at line 59 of file istream.

5.369.2.7 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_iostream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Reimplemented in [std::basic_fstream<_CharT, _Traits>](#), and [std::basic_istreamstream<_CharT, _Traits, _Alloc>](#).

Definition at line 777 of file `istream`.

5.369.2.8 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` `[inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the `ios_base` object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.369.2.9 `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`

- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 254 of file ios_base.h.

5.369.2.10 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_iostream< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream< _CharT, _Traits >`.

Reimplemented in `std::basic_fstream< _CharT, _Traits >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 778 of file istream.

5.369.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_istream< _CharT, _Traits >::int_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, and `std::basic_istringstream< _CharT, _Traits, _Alloc >`.

Definition at line 60 of file istream.

5.369.2.12 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.369.2.13 `template<typename _CharT, typename _Traits> typedef
_Traits::off_type std::basic_iostream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Reimplemented in `std::basic_fstream<_CharT, _Traits>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 780 of file `istream`.

5.369.2.14 `template<typename _CharT, typename _Traits> typedef
_Traits::off_type std::basic_istream<_CharT, _Traits>::off_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 62 of file `istream`.

5.369.2.15 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`

- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.369.2.16 `template<typename _CharT, typename _Traits> typedef
_Traits::pos_type std::basic_iostream< _CharT, _Traits
>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream< _CharT, _Traits >`.

Reimplemented in `std::basic_fstream< _CharT, _Traits >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 779 of file `istream`.

5.369.2.17 `template<typename _CharT, typename _Traits> typedef
_Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, and `std::basic_istringstream< _CharT, _Traits, _Alloc >`.

Definition at line 61 of file `istream`.

5.369.2.18 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`

- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file `ios_base.h`.

5.369.2.19 `template<typename _CharT, typename _Traits> typedef
_Traits std::basic_istream<_CharT, _Traits>::traits_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istreamstream<_CharT, _Traits, _Alloc>](#).

Definition at line 63 of file `istream`.

5.369.2.20 `template<typename _CharT, typename _Traits> typedef _Traits
std::basic_iostream<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Reimplemented in [std::basic_fstream<_CharT, _Traits>](#), and [std::basic_stringstream<_CharT, _Traits, _Alloc>](#).

Definition at line 781 of file `istream`.

5.369.3 Member Enumeration Documentation

5.369.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.369.4 Constructor & Destructor Documentation

5.369.4.1 `template<typename _CharT, typename _Traits>
std::basic_istream< _CharT, _Traits >::basic_istream (
basic_streambuf< _CharT, _Traits > * __sb) [inline,
explicit]`

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

Definition at line 794 of file istream.

5.369.4.2 `template<typename _CharT, typename _Traits> virtual
std::basic_istream< _CharT, _Traits >::~~basic_istream ()
[inline, virtual]`

Destructor does nothing.

Definition at line 801 of file istream.

5.369.5 Member Function Documentation

5.369.5.1 `const locale& std::ios_base::_M_getloc () const [inline,
inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios_base.h.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.369.5.2 `template<typename _CharT, typename _Traits> void
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

5.369.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file basic_ios.h.

5.369.5.4 `template<typename _CharT , typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.369.5.5 `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (const basic_ios<_CharT, _Traits> & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

`__rhs` The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

5.369.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

5.369.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file basic_ios.h.

5.369.5.8 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits >::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.369.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const [inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.369.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill(char_type __ch) [inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.369.5.11 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill() const [inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

5.369.5.12 fmtflags std::ios_base::flags() const [inline, inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), and std::operator>>().

5.369.5.13 fmtflags std::ios_base::flags(fmtflags __fmtfl) [inline, inherited]

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.369.5.14 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush() [inherited]

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

5.369.5.15 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream<_CharT, _Traits>::gcount () const
[inline, inherited]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file `istream`.

5.369.5.16 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits
>::get (void) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.369.5.17 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n, char_type __delim) [inherited]`

Simple multiple-character extraction.

Parameters

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

5.369.5.18 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type & __c) [inherited]`

Simple extraction.

Parameters

c The character in which to store data.

Returns

*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.369.5.19 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

Returns

*this

Returns get(s,n,widen('\n')).

Definition at line 333 of file istream.

5.369.5.20 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb, char_type __delim) [inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

5.369.5.21 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb,widen('\n'))`.

Definition at line 366 of file istream.

5.369.5.22 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n, char_type __delim) [inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.369.5.23 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

Returns

*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

5.369.5.24 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.369.5.25 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good () const [inline, inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.369.5.26 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(void) [inherited]`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.369.5.27 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore(streamsize __n, int_type __delim) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

5.369 std::basic_istream< _CharT, _Traits > Class Template Reference 1733

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

5.369.5.28 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

5.369.5.29 template<typename _CharT, typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls ios_base::imbue(loc), and if a stream buffer is associated with this stream, calls that buffer's pubimbue(loc).

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Reimplemented from [std::ios_base](#).

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

5.369.5.30 `template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<
_CharT, _Traits> * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.369.5.31 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.369.5.32 `template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

5.369.5.33 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * () const` [**inline**, **inherited**]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 111 of file `basic_ios.h`.

5.369.5.34 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! () const` [**inline**, **inherited**]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file `basic_ios.h`.

5.369.5.35 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (bool __n)` [**inline**, **inherited**]

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 173 of file ostream.

5.369.5.36 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 169 of file ostream.

5.369.5.37 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 165 of file ostream.

5.369.5.38 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `omanip` header.

Basic arithmetic inserters.

Parameters

`A` variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.369.5.42 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.369.5.43 `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (int __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.369.5.44 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (long long
__n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 200 of file ostream.

5.369.5.45 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (double __f
) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 209 of file ostream.

5.369.5.46 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (long double
__f) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 221 of file `ostream`.

5.369.5.47 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (float __f)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

`A` variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 213 of file `ostream`.

5.369.5.48 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (const void *
__p) [inline, inherited]`

Basic arithmetic inserters.

Parameters

`A` variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 225 of file `ostream`.

5.369.5.49 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]`

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.50 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 191 of file ostream.

5.369.5.51 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (unsigned
long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 204 of file ostream.

5.369.5.52 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (void *& __p
) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 215 of file istream.

5.369.5.53 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (
__istream_type &(*)(__istream_type &) __pf) [inline,
inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `omanip` header.

Definition at line 120 of file `istream`.

5.369.5.54 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (unsigned int & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 181 of file `istream`.

5.369.5.55 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Parameters

A variable of builtin type.

Returns

**this* if successful

5.369 std::basic_istream< _CharT, _Traits > Class Template Reference 1749

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 174 of file istream.

5.369.5.69 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits
>::peek (void) [inherited]`

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.70 `streamsize std::ios_base::precision (streamsize __prec)
[inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of `precision()`.

Definition at line 629 of file ios_base.h.

5.369.5.71 `streamsize std::ios_base::precision () const [inline,
inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

5.369.5.72 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (char_type __c) [inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

`*this`

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.369.5.73 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c) [inherited]`

Unextracting a single character.

Parameters

c The character to push back into the input stream.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

5.369.5.74 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

5.369.5.75 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf () const [inline, inherited]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 311 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

5.369.5.76 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.369.5.77 `template<typename _CharT, typename _Traits> istate
std::basic_ios< _CharT, _Traits >::rdstate () const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.369.5.78 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
char_type * __s, streamsize __n) [inherited]`

Extraction without delimiters.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.79 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::readsome (char_type *
__s, streamsize __n) [inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

- s* A character array.
- n* Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.80 `void std::ios_base::register_callback (event_callback __fn, int
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

- __fn* The function to add.
- __index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.369.5.81 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (pos_type __pos) [inherited]`

Changing the current read position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.82 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current read position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.369.5.83 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current write position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.369.5.84 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos) [inherited]`

Changing the current write position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.369.5.85 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios_base.h.

5.369.5.86 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.369.5.87 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.369.5.88 `template<typename _CharT , typename _Traits > int
std::basic_istream< _CharT, _Traits >::sync (void)
[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

5.369 std::basic_iostream< _CharT, _Traits > Class Template Reference 1759

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.369.5.89 static bool std::ios_base::sync_with_stdio (bool __sync = true) [static, inherited]

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.369.5.90 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tell (void) [inherited]

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

5.369.5.91 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.369.5.92 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits>* __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

5.369.5.93 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.369.5.94 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::unget (void) [inherited]`

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, `std::basic_ios< _CharT, _Traits>::setstate()`, and `std::basic_streambuf< _CharT, _Traits>::sungetc()`.

5.369.5.95 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.369.5.96 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::widen (char __c) const
[inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()) .widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.369.5.97 `streamsize std::ios_base::width () const [inline,
inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::operator>>()`.

5.369.5.98 `streamsize std::ios_base::width (streamsize __wide) [inline,
inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.369.5.99 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::write (const char_type * __s, streamsize __n) [inherited]`

Character string insertion.

Parameters

s The array to insert.

n Maximum number of characters to insert.

Returns

*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

5.369.5.100 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.369.6 Member Data Documentation

5.369.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount` **[protected, inherited]**

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.369.6.2 `const fmtflags std::ios_base::adjustfield` **[static, inherited]**

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.369.6.3 `const openmode std::ios_base::app` **[static, inherited]**

Seek to end before each write.

Definition at line 363 of file `ios_base.h`.

5.369.6.4 `const openmode std::ios_base::ate` **[static, inherited]**

Open and seek to end immediately after opening.

Definition at line 366 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

5.369.6.5 `const iostate std::ios_base::badbit` **[static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 333 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.369.6.6 `const fmtflags std::ios_base::basefield` [`static`, `inherited`]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.369.6.7 `const seekdir std::ios_base::beg` [`static`, `inherited`]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file `ios_base.h`.

5.369.6.8 `const openmode std::ios_base::binary` [`static`, `inherited`]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

5.369.6.9 `const fmtflags std::ios_base::boolalpha` [`static`, `inherited`]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

5.369.6.10 `const seekdir std::ios_base::cur` [`static`, `inherited`]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.369.6.11 `const fmtflags std::ios_base::dec` [`static`, `inherited`]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file `ios_base.h`.

5.369.6.12 `const seekdir std::ios_base::end` [`static`, `inherited`]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

5.369.6.13 `const iostate std::ios_base::eofbit` [`static`, `inherited`]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, and `std::ws()`.

5.369.6.14 `const iostate std::ios_base::failbit` [`static`, `inherited`]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.369.6.15 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.369.6.16 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of set f.

Definition at line 315 of file ios_base.h.

5.369.6.17 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.369.6.18 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.369.6.19 `const openmode std::ios_base::in` **[static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.369.6.20 `const fmtflags std::ios_base::internal` **[static, inherited]**

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 271 of file `ios_base.h`.

5.369.6.21 `const fmtflags std::ios_base::left` **[static, inherited]**

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.369.6.22 `const fmtflags std::ios_base::oct` **[static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 278 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.369.6.23 `const openmode std::ios_base::out` **[static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

5.369 std::basic_iostream< _CharT, _Traits > Class Template Reference 1769

Referenced by `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.369.6.24 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file `ios_base.h`.

5.369.6.25 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file `ios_base.h`.

5.369.6.26 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer `///` output.

Definition at line 289 of file `ios_base.h`.

5.369.6.27 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated `///` floating-point output.

Definition at line 293 of file `ios_base.h`.

5.369.6.28 const fmtflags std::ios_base::showpos [static, inherited]

Generates a `+` sign in non-negative generated numeric output.

Definition at line 296 of file `ios_base.h`.

5.369.6.29 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file `ios_base.h`.

5.369.6.30 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for `ofstream`.

Definition at line 380 of file ios_base.h.

5.369.6.31 `const fmtflags std::ios_base::unitbuf` `[static, inherited]`

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.369.6.32 `const fmtflags std::ios_base::uppercase` `[static, inherited]`

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`.

The documentation for this class was generated from the following file:

- [istream](#)

5.370 `std::basic_istream< _CharT, _Traits >` Class Template Reference

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic_streambuf](#) to do the actual input.

Inheritance diagram for `std::basic_istream< _CharT, _Traits >`:

Classes

- class [sentry](#)

Performs setup work for input streams.

Public Types

Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

5.370.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_istream< _CharT, _Traits >`

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic_streambuf](#) to do the actual input.

Definition at line 55 of file istream.

5.370.2 Member Typedef Documentation

5.370.2.1 `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_istream< _CharT, _Traits >::__ctype_type`

These are non-standard types.

Reimplemented from [std::basic_ios](#)< [_CharT](#), [_Traits](#) >.

Definition at line 71 of file istream.

5.370.2.2 `template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits> >
std::basic_istream< _CharT, _Traits >::__num_get_type`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 70 of file `istream`.

5.370.2.3 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ios< _CharT, _Traits >::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented in [std::basic_ostream< _CharT, _Traits >](#), [std::basic_ostream< char, _Traits >](#), and [std::basic_ostream< char >](#).

Definition at line 84 of file `basic_ios.h`.

5.370.2.4 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_istream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 59 of file `istream`.

5.370.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)
[inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the `ios_base` object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios_base](#) and [basic_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 435 of file [ios_base.h](#).

5.370.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file [ios_base.h](#).

5.370.2.7 `template<typename _CharT, typename _Traits> typedef
_Traits::int_type std::basic_istream< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 60 of file `istream`.

5.370.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.370.2.9 `template<typename _CharT, typename _Traits> typedef
_Traits::off_type std::basic_istream< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 62 of file `istream`.

5.370.2.10 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- *app*
- *ate*
- *binary*
- *in*
- *out*
- *trunc*

Definition at line 360 of file *ios_base.h*.

5.370.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istringstream< _CharT, _Traits, _Alloc >](#).

Definition at line 61 of file *istream*.

5.370.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

_Ios_Seekdir is implementation-defined. Defined values of type *seekdir* are:

- *beg*
- *cur*, equivalent to *SEEK_CUR* in the C standard library.
- *end*, equivalent to *SEEK_END* in the C standard library.

Definition at line 392 of file *ios_base.h*.

5.370.2.13 `template<typename _CharT, typename _Traits> typedef _Traits
std::basic_istream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 63 of file `istream`.

5.370.3 Member Enumeration Documentation**5.370.3.1** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.370.4 Constructor & Destructor Documentation**5.370.4.1** `template<typename _CharT, typename _Traits> std::basic_istream<
_CharT, _Traits >::basic_istream (__streambuf_type * __sb)
[inline, explicit]`

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 91 of file `istream`.

5.370.4.2 `template<typename _CharT, typename _Traits> virtual
std::basic_istream< _CharT, _Traits >::~~basic_istream ()
[inline, virtual]`

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 101 of file `istream`.

5.370.5 Member Function Documentation

5.370.5.1 `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.370.5.2 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

5.370.5.3 `template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit) [inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file basic_ios.tcc.

Referenced by std::basic_ios< _CharT, _Traits >::rdbuf().

5.370.5.4 `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (const basic_ios<_CharT, _Traits> & __rhs) [inherited]`

Copies fields of __rhs into this.

Parameters

`__rhs` The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 62 of file basic_ios.tcc.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

5.370.5.5 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file basic_ios.h.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

5.370.5.6 `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits >::exceptions (iostate __except) [inline, inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.370.5.7 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits >::exceptions () const [inline, inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

5.370.5.8 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const [inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file basic_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.370.5.9 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill(char_type __ch) [inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file basic_ios.h.

5.370.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill() const [inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.370.5.11 `fmtflags std::ios_base::flags() const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.370.5.12 `fmtflags std::ios_base::flags(fmtflags __fmtfl) [inline, inherited]`

Setting new format flags all at once.

Parameters

__fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 561 of file `ios_base.h`.

5.370.5.13 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount() const [inline]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

5.370.5.14 `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void)`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.15 `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type & __c)`

Simple extraction.

Parameters

`c` The character in which to store data.

Returns

`*this`

Tries to extract a character and store it in `c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.16 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (char_type * __s, streamsize __n, char_type __delim)`

Simple multiple-character extraction.

Parameters

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.370.5.17 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get (char_type * __s, streamsize __n) [inline]`

Simple multiple-character extraction.

Parameters

- s* Pointer to an array.
n Maximum number of characters to store in *s*.

Returns

*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file `istream`.

5.370.5.18 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (__streambuf_type & __sb, char_type __delim)`

Extraction into another streambuf.

Parameters

- sb* A streambuf in which to store data.
delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, `failbit` is set in the stream's error state.

Definition at line 356 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::putc()`.

5.370.5.19 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::get (__streambuf_type &
__sb) [inline]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb,widen('\n'))`.

Definition at line 366 of file `istream`.

5.370.5.20 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits
>::getline (char_type * __s, streamsize __n, char_type __delim)`

String extraction.

Parameters

s A character array in which to store the data.

n Maximum number of characters to extract.

delim A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

5.370.5.21 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n) [inline]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

Returns

*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file istream.

Referenced by std::basic_istream< char >::getline().

5.370.5.22 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Traits >::imbue(), std::operator>>(), and std::ws().

5.370.5.23 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::good () const [inline,
inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.370.5.24 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore
(void)`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `n != std::numeric_limits<int>::max()`, `n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sputc()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.25 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore
(streamsize __n)`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.370.5.26 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore
(streamsize __n, int_type __delim)`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.370.5.27 `template<typename _CharT , typename _Traits > locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)
[inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

5.370.5.28 `template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<
_CharT, _Traits> * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.370.5.29 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.370.5.30 `template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

5.370.5.31 `template<typename _CharT, typename _Traits> std::basic_ios<
_CharT, _Traits>::operator void * () const [inline,
inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.370.5.32 `template<typename _CharT, typename _Traits> bool
std::basic_ios<_CharT, _Traits>::operator! () const
[inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.370.5.33 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 181 of file `istream`.

5.370.5.34 `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb)`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.35 `template<typename _CharT, typename _Traits > basic_istream<

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 174 of file istream.

5.370.5.45 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (void *& __p
) [inline]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

Definition at line 215 of file istream.

5.370.5.46 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (float & __f
) [inline]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 203 of file istream.

5.370.5.47 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (double &
__f) [inline]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 207 of file istream.

5.370.5.48 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits
>::operator>> (int & __n)`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 159 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.370.5.49 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> (long double & __f) [inline]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 211 of file istream.

5.370.5.50 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (void)`

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.370.5.51 `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file ios_base.h.

5.370.5.52 streamsize std::ios_base::precision () const [inline, inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

5.370.5.53 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (char_type __c)

Unextracting a single character.

Parameters

c The character to push back into the input stream.

Returns

*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets badbit in the error state.

Note

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

5.370.5.54 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

5.370.5.55 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::rdbuf () const [inline, inherited]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_istream< _CharT, _Traits, _Alloc >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 311 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::imbue(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

5.370.5.56 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::clear().

5.370.5.57 `template<typename _CharT, typename _Traits> istate
std::basic_ios< _CharT, _Traits >::rdstate () const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See [std::ios_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

5.370.5.58 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
char_type * __s, streamsize __n)`

Extraction without delimiters.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.59 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::readsome (char_type *
__s, streamsize __n)`

Extraction until the buffer is exhausted, but no more.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.60 `void std::ios_base::register_callback (event_callback __fn, int
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.370.5.61 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (pos_type __pos)`

Changing the current read position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.370.5.62 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (off_type __off, ios_base::seekdir __dir)`

Changing the current read position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.63 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.370.5.64 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.370.5.65 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.370.5.66 `template<typename _CharT , typename _Traits > int
std::basic_istream< _CharT, _Traits >::sync (void)`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.370.5.67 `static bool std::ios_base::sync_with_stdio (bool __sync = true)` **[static, inherited]**

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.370.5.68 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits>::pos_type std::basic_istream< _CharT, _Traits>::tellg (void)`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.370.5.69 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file basic_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.370.5.70 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file basic_ios.h.

5.370.5.71 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget
(void)`

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sungetc()`.

5.370.5.72 void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.370.5.73 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline, inherited]

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.370.5.74 `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.370.5.75 `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

5.370.5.76 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.370.6 Member Data Documentation**5.370.6.1 `template<typename _CharT, typename _Traits> streamsize

5.370.6.14 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.370.6.15 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.370.6.16 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 315 of file ios_base.h.

5.370.6.17 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.370.6.18 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.370.6.19 const openmode std::ios_base::in [static, inherited]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.370.6.20 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.370.6.21 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.370.6.22 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.370.6.23 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.370.6.24 `const fmtflags std::ios_base::right` `[static, inherited]`

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.370.6.25 `const fmtflags std::ios_base::scientific` `[static, inherited]`

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.370.6.26 `const fmtflags std::ios_base::showbase` `[static, inherited]`

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.370.6.27 `const fmtflags std::ios_base::showpoint` `[static, inherited]`

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.370.6.28 `const fmtflags std::ios_base::showpos` `[static, inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.370.6.29 `const fmtflags std::ios_base::skipws` `[static, inherited]`

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.370.6.30 `const openmode std::ios_base::trunc` [`static`, `inherited`]

Open for input. Default for `ofstream`.

Definition at line 380 of file `ios_base.h`.

5.370.6.31 `const fmtflags std::ios_base::unitbuf` [`static`, `inherited`]

Flushes output after each output operation.

Definition at line 302 of file `ios_base.h`.

5.370.6.32 `const fmtflags std::ios_base::uppercase` [`static`, `inherited`]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

The documentation for this class was generated from the following files:

- [istream](#)
- [istream.tcc](#)

5.371 `std::basic_istream< _CharT, _Traits >::sentry` Class Reference

Performs setup work for input streams.

Public Types

- `typedef __istream_type::__ctype_type __ctype_type`
- `typedef _Traits::int_type __int_type`
- `typedef basic_istream< _CharT, _Traits > __istream_type`
- `typedef basic_streambuf< _CharT, _Traits > __streambuf_type`
- `typedef _Traits traits_type`

Public Member Functions

- `sentry(basic_istream< _CharT, _Traits > &__is, bool __noskipws=false)`
- `operator bool() const`

5.371.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_istream< _-
_CharT, _Traits >::sentry
```

Performs setup work for input streams. Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations*, although only prefix actions are currently required by the standard.

Definition at line 633 of file istream.

5.371.2 Member Typedef Documentation

5.371.2.1 `template<typename _CharT, typename _Traits> typedef _Traits
std::basic_istream< _CharT, _Traits >::sentry::traits_type`

Easy access to dependant types.

Definition at line 640 of file istream.

5.371.3 Constructor & Destructor Documentation

5.371.3.1 `template<typename _CharT, typename _Traits> std::basic_istream<
_CharT, _Traits >::sentry::sentry (basic_istream< _CharT, _Traits
> & __is, bool __noskipws = false) [explicit]`

The constructor performs all the work.

Parameters

is The input stream to guard.

noskipws Whether to consume whitespace or not.

If the stream state is good (*is.good()* is true), then the following actions are performed, otherwise the sentry state is false (*not okay*) and failbit is set in the stream state.

The sentry's preparatory actions are:

1. if the stream is tied to an output stream, `is.tie()->flush()` is called to synchronize the output sequence
2. if *noskipws* is false, and `ios_base::skipws` is set in `is.flags()`, the sentry extracts and discards whitespace characters from the stream. The currently imbued locale is used to determine whether each character is whitespace.

5.372 `std::basic_istringstream< _CharT, _Traits, _Alloc >` Class Template Reference 1823

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file `istream.tcc`.

References `std::__ctype_abstract_base< _CharT >::is()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.371.4 Member Function Documentation

5.371.4.1 `template<typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits >::sentry::operator bool () const` [`inline`, `explicit`]

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (`true == okay`).

Definition at line 681 of file `istream`.

The documentation for this class was generated from the following files:

- [istream](#)
- [istream.tcc](#)

5.372 `std::basic_istringstream< _CharT, _Traits, _-Alloc >` Class Template Reference

Controlling input for `std::string`.

This class supports reading from objects of type [std::basic_string](#), using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_stringbuf](#) is used, which this page refers to as `sb`.

Inheritance diagram for `std::basic_istream< _CharT, _Traits, _Alloc >`:

Public Types

- typedef `ctype< _CharT > __ctype_type`

Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

5.372.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_istream< _CharT, _Traits, _Alloc >`

Controlling input for `std::string`.

This class supports reading from objects of type [std::basic_string](#), using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_stringbuf](#) is used, which this page refers to as `sb`.

Definition at line 256 of file `sstream`.

5.372.2 Member Typedef Documentation

5.372.2.1 `template<typename _CharT, typename _Traits> typedef c_type<_CharT> std::basic_istream< _CharT, _Traits >::__c_type_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios](#)< _CharT, _Traits >.

Definition at line 71 of file `istream`.

5.372.2.2 `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_istream< _CharT, _Traits >::__num_get_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios](#)< _CharT, _Traits >.

Definition at line 70 of file `istream`.

5.372.2.3 `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1831

Reimplemented in [std::basic_ostream<_CharT, _Traits>](#), [std::basic_ostream<char, _Traits>](#), and [std::basic_ostream<char>](#).

Definition at line 84 of file `basic_ios.h`.

5.372.2.4 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef _CharT std::basic_istream<_CharT, _Traits, _Alloc>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream<_CharT, _Traits>](#).

Definition at line 260 of file `sstream`.

5.372.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)
[inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the `ios_base` object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.372.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 254 of file ios_base.h.

5.372.2.7 `template<typename _CharT, typename _Traits, typename _Alloc>
 typedef traits_type::int_type std::basic_istream< _CharT,
 _Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 265 of file sstream.

5.372.2.8 `typedef _Ios_Iostate std::ios_base::iostate` **[inherited]**

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1833

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.372.2.9 `template<typename _CharT, typename _Traits, typename _Alloc>`
`typedef traits_type::off_type std::basic_istream<_CharT,`
`_Traits, _Alloc>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream<_CharT, _Traits>](#).

Definition at line 267 of file `sstream`.

5.372.2.10 `typedef _Ios_Openmode std::ios_base::openmode` `[inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.372.2.11 `template<typename _CharT, typename _Traits, typename _Alloc>
 typedef traits_type::pos_type std::basic_istream< _CharT,
 _Traits, _Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 266 of file sstream.

5.372.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file `ios_base.h`.

5.372.2.13 `template<typename _CharT, typename _Traits, typename _Alloc>
 typedef _Traits std::basic_istream< _CharT, _Traits, _Alloc
 >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 261 of file sstream.

5.372.3 Member Enumeration Documentation

5.372.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.372.4 Constructor & Destructor Documentation

5.372.4.1 `template<typename _CharT, typename _Traits, typename
_Alloc> std::basic_istream< _CharT, _Traits, _Alloc
>::basic_istream (ios_base::openmode __mode = ios_base::in
) [inline, explicit]`

Default constructor starts with an empty string buffer.

Parameters

mode Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes *sb* using *mode*|*in*, and passes &*sb* to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 292 of file `sstream`.

5.372.4.2 `template<typename _CharT, typename _Traits, typename
_Alloc> std::basic_istream< _CharT, _Traits, _Alloc
>::basic_istream (const __string_type & __str,
ios_base::openmode __mode = ios_base::in) [inline,
explicit]`

Starts with an existing string buffer.

Parameters

str A string to copy as a starting buffer.

mode Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes *sb* using *str* and *mode*|*in*, and passes &*sb* to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 310 of file `sstream`.

5.372.4.3 `template<typename _CharT, typename _Traits, typename
_Alloc> std::basic_istream< _CharT, _Traits, _Alloc
>::~~basic_istream () [inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 321 of file sstream.

5.372.5 Member Function Documentation

5.372.5.1 `const locale& std::ios_base::_M_getloc () const [inline,
inherited]`

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.372.5.2 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

5.372 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1837

5.372.5.3 `template<typename _CharT, typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.372.5.4 `template<typename _CharT, typename _Traits > basic_ios<
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that [rdbuf\(\)](#) and [rdstate\(\)](#) remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

5.372.5.5 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::eof () const [inline, inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.372.5.6 `template<typename _CharT, typename _Traits> iostate
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,
inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.372.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios<
_CharT, _Traits >::exceptions (iostate __except) [inline,
inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
```

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference

1839

```
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.372.5.8 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const` `[inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

5.372.5.9 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill() const` `[inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.372.5.10 `template<typename _CharT, typename _Traits> char_type
std::basic_ios<_CharT, _Traits>::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.372.5.11 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.372.5.12 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

5.372 std::basic_istream< _CharT, _Traits, _Alloc > Class Template Reference 1841

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.372.5.13 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::gcount () const
[inline, inherited]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

5.372.5.14 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits
>::get (void) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.372.5.15 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
char_type & __c) [inherited]`

Simple extraction.

Parameters

c The character in which to store data.

Returns

*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.372.5.16 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

Returns

*this

Returns get(s,n,widen('\n')).

Definition at line 333 of file istream.

5.372.5.17 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::get (__streambuf_type & __sb, char_type __delim) [inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

5.372.5.18 `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n, char_type __delim)
[inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

delim A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- $n-1$ characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.372.5.19 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get (__streambuf_type & __sb) [inline, inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file istream.

5.372.5.20 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n, char_type __delim) [inherited]`

String extraction.

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference

1845

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sputc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.372.5.21 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

Returns

*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream< char >::getline()`.

5.372.5.22 locale `std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

5.372.5.23 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good () const [inline, inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.372.5.24 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::ignore (streamsize __n) [inherited]`

Simple extraction.

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference

1847

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.372.5.25 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::ignore(void) [inherited]`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.372.5.26 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (streamsize __n, int_type __delim) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 555 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.372.5.27 `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc) [inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

5.372 std::basic_istringstream< _CharT, _Traits, _Alloc > Class Template Reference **1849**

5.372.5.28 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.372.5.29 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.372.5.30 `template<typename _CharT, typename _Traits> char
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

`c` The character to narrow.

`dfault` The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

```

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to parse the input data.

5.372 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1853

Definition at line 159 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.372.5.39 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.372.5.40 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*`this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 181 of file `istream`.

5.372.5.41 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline, inherited]`

Definition at line 131 of file `istream`.

5.372 std::basic_istream<_CharT, _Traits, _Alloc > Class Template Reference 1855

5.372.5.44 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 185 of file istream.

5.372.5.45 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (unsigned long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 189 of file istream.

5.372.5.46 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> (double & __f) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 207 of file `istream`.

5.372.5.47 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (long long &
__n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

`A` variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 194 of file `istream`.

5.372.5.48 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (bool & __n
) [inline, inherited]`

Basic arithmetic extractors.

Parameters

`A` variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream`.

5.372 std::basic_istream< _CharT, _Traits, _Alloc > Class Template Reference 1857

5.372.5.49 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 198 of file `istream`.

5.372.5.50 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (void) [inherited]`

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.372.5.51 `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

5.372.5.52 `streamsize std::ios_base::precision (streamsize __prec)
[inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file ios_base.h.

5.372.5.53 `template<typename _CharT, typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits
>::putback (char_type __c) [inherited]`

Unextracting a single character.

Parameters

c The character to push back into the input stream.

Returns

*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets badbit in the error state.

Note

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::eof(), std::ios_base::goodbit, std::basic_ios<

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1859

`_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

5.372.5.54 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

5.372.5.55 `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* std::basic_istream<_CharT, _Traits, _Alloc>::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 332 of file `sstream`.

5.372.5.56 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.372.5.57 `template<typename _CharT, typename _Traits> iostate
std::basic_ios<_CharT, _Traits>::rdstate() const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.372.5.58 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::read(
char_type * __s, streamsize __n) [inherited]`

Extraction without delimiters.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.372.5.59 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::readsome (char_type *
__s, streamsize __n) [inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

s A character array.

n Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.372.5.60 `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.372.5.61 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current read position.

Parameters

`off` A file offset object.

`dir` The direction in which to seek.

Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

5.372 std::basic_istream< _CharT, _Traits, _Alloc > Class Template Reference 1863

Definition at line 870 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.372.5.62 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (pos_type __pos) [inherited]

Changing the current read position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

5.372.5.63 fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.372.5.64 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.372.5.65 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream<`

5.372 std::basic_istream< _CharT, _Traits, _Alloc > Class Template Reference 1865

_CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

5.372.5.66 `template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_istream< _CharT, _Traits, _Alloc >::str (
const __string_type & __s) [inline]`

Setting a new buffer.

Parameters

s The string to use as a new sequence.

Calls `rdbuf() -> str(s)`.

Definition at line 350 of file sstream.

5.372.5.67 `template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_istream< _CharT, _Traits, _Alloc
>::str () const [inline]`

Copying out the string buffer.

Returns

`rdbuf() -> str()`

Definition at line 340 of file sstream.

5.372.5.68 `template<typename _CharT , typename _Traits > int
std::basic_istream< _CharT, _Traits >::sync (void)
[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.372.5.69 `static bool std::ios_base::sync_with_stdio (bool __sync = true)`
[static, inherited]

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.372.5.70 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg (void)` **[inherited]**

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1867

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.372.5.71 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.372.5.72 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits> * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

5.372.5.73 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget
(void) [inherited]`

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 744 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

5.372.5.74 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.372.5.75 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

5.372 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1869

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.372.5.76 `streamsize std::ios_base::width () const` `[inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

5.372.5.77 `streamsize std::ios_base::width (streamsize __wide)` `[inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.372.5.78 `static int std::ios_base::xalloc () throw ()` `[static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iwor`d and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iwor`d and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iwor`d and `pword` arrays.

5.372.6 Member Data Documentation
**5.372.6.1 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::_M_gcount` [protected,

5.372.6.18 `const fmtflags std::ios_base::hex [static, inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.372.6.19 `const openmode std::ios_base::in [static, inherited]`

Open for input. Default for `ifstream` and `fstream`.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.372.6.20 `const fmtflags std::ios_base::internal [static, inherited]`

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 271 of file `ios_base.h`.

5.372.6.21 `const fmtflags std::ios_base::left [static, inherited]`

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.372.6.22 `const fmtflags std::ios_base::oct [static, inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 278 of file `ios_base.h`.

5.372 `std::basic_istringstream< _CharT, _Traits, _Alloc >` Class Template Reference 1875

Referenced by `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.372.6.23 `const openmode std::ios_base::out` [`static`, `inherited`]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.372.6.24 `const fmtflags std::ios_base::right` [`static`, `inherited`]

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file `ios_base.h`.

5.372.6.25 `const fmtflags std::ios_base::scientific` [`static`, `inherited`]

Generates floating-point output in scientific notation.

Definition at line 285 of file `ios_base.h`.

5.372.6.26 `const fmtflags std::ios_base::showbase` [`static`, `inherited`]

Generates a prefix indicating the numeric base of generated integer `///` output.

Definition at line 289 of file `ios_base.h`.

5.372.6.27 `const fmtflags std::ios_base::showpoint` [`static`, `inherited`]

Generates a decimal-point character unconditionally in generated `///` floating-point output.

Definition at line 293 of file `ios_base.h`.

5.372.6.28 `const fmtflags std::ios_base::showpos` [`static`, `inherited`]

Generates a `+` sign in non-negative generated numeric output.

Definition at line 296 of file `ios_base.h`.

5.372.6.29 `const fmtflags std::ios_base::skipws` `[static, inherited]`

Skips leading white space before certain input operations.

Definition at line 299 of file `ios_base.h`.

5.372.6.30 `const openmode std::ios_base::trunc` `[static, inherited]`

Open for input. Default for `ofstream`.

Definition at line 380 of file `ios_base.h`.

5.372.6.31 `const fmtflags std::ios_base::unitbuf` `[static, inherited]`

Flushes output after each output operation.

Definition at line 302 of file `ios_base.h`.

5.372.6.32 `const fmtflags std::ios_base::uppercase` `[static, inherited]`

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

The documentation for this class was generated from the following file:

- [sstream](#)

5.373 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference

Controlling output for files.

This class supports reading from named files, using the inherited functions from [std::basic_ostream](#). To control the associated sequence, an instance of [std::basic_filebuf](#) is used, which this page refers to as `sb`.

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`

- [__ostream_type](#) & [operator<<](#) (unsigned long __n)
- [__ostream_type](#) & [operator<<](#) (bool __n)
- [__ostream_type](#) & [operator<<](#) (short __n)

- [__ostream_type](#) & [operator<<](#) (const void *__p)
- [__ostream_type](#) & [operator<<](#) ([__streambuf_type](#) *__sb)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type [std::basic_ostream::sentry](#). This has several effects, concluding with the setting of a status flag; see the [sentry documentation](#) for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, [ios_base::badbit](#) will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- [__ostream_type](#) & [put](#) ([char_type](#) __c)

5.373.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ofstream< _CharT, _Traits >`

Controlling output for files.

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 586 of file `fstream`.

5.373.2 Member Typedef Documentation

5.373.2.1 `template<typename _CharT, typename _Traits> typedef
 ctype<_CharT> std::basic_ofstream<_CharT, _Traits
 >::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file `ostream`.

5.373.2.2 `template<typename _CharT, typename _Traits> typedef
 num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
 > std::basic_ios<_CharT, _Traits>::__num_get_type
 [inherited]`

These are non-standard types.

Reimplemented in [std::basic_istream<_CharT, _Traits>](#), [std::basic_istream<char, _Traits>](#), and [std::basic_istream<char>](#).

Definition at line 86 of file `basic_ios.h`.

5.373.2.3 `template<typename _CharT, typename _Traits> typedef
 num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
 > std::basic_ofstream<_CharT, _Traits>::__num_put_type
 [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file `ostream`.

5.373.2.4 `template<typename _CharT, typename _Traits> typedef _CharT
 std::basic_ofstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ofstream<_CharT, _Traits>](#).

Definition at line 590 of file `fstream`.

5.373.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` [*inherited*]

The type of an event callback function.

Parameters

- event* One of the members of the event enum.
- ios_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.373.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [*inherited*]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`

- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file `ios_base.h`.

5.373.2.7 `template<typename _CharT , typename _Traits > typedef traits_type::int_type std::basic_ofstream< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Definition at line 592 of file `fstream`.

5.373.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.373.2.9 `template<typename _CharT , typename _Traits > typedef traits_type::off_type std::basic_ofstream< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream< _CharT, _Traits >](#).

Definition at line 594 of file `fstream`.

5.373.2.10 `typedef _Ios_Openmode std::ios_base::openmode` **[inherited]**

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.373.2.11 `template<typename _CharT , typename _Traits > typedef traits_type::pos_type std::basic_ofstream< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream< _CharT, _Traits >](#).

Definition at line 593 of file `fstream`.

5.373.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` **[inherited]**

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file ios_base.h.

5.373.2.13 `template<typename _CharT , typename _Traits > typedef _Traits
std::basic_ofstream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream< _CharT, _Traits >](#).

Definition at line 591 of file fstream.

5.373.3 Member Enumeration Documentation

5.373.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during [imbue\(\)](#). copyfmt_event is used during copyfmt().

Definition at line 418 of file ios_base.h.

5.373.4 Constructor & Destructor Documentation

5.373.4.1 `template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream ()
[inline]`

Default constructor.

Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 612 of file fstream.

5.373.4.2 `template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (const char
* __s, ios_base::openmode __mode = ios_base::out|ios_base::trunc)
[inline, explicit]`

Create an output file stream.

Parameters

s Null terminated string specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

[ios_base::out](#)|[ios_base::trunc](#) is automatically included in *mode*.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 627 of file `fstream`.

```
5.373.4.3 template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream
( const std::string & __s, ios_base::openmode __mode =
ios_base::out|ios_base::trunc ) [inline, explicit]
```

Create an output file stream.

Parameters

s `std::string` specifying the filename.

mode Open file in specified mode (see [std::ios_base](#)).

[ios_base::out](#)|[ios_base::trunc](#) is automatically included in *mode*.

Definition at line 645 of file `fstream`.

```
5.373.4.4 template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream ( )
[inline]
```

The destructor does nothing.

The file is closed by the `filebuf` object, not the formatting stream.

Definition at line 660 of file `fstream`.

5.373.5 Member Function Documentation

```
5.373.5.1 const locale& std::ios_base::_M_getloc ( ) const [inline,
inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

5.373.5.2 `template<typename _CharT, typename _Traits> void
std::basic_ostream< _CharT, _Traits >::M_write (const char_type
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

5.373.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file basic_ios.h.

5.373.5.4 `template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.373.5.5 `template<typename _CharT, typename _Traits> void
std::basic_ofstream<_CharT, _Traits>::close () [inline]`

Close the file.

Calls [std::basic_filebuf::close\(\)](#). If that function fails, `failbit` is set in the stream's error state.

Definition at line 740 of file `fstream`.

5.373.5.6 `template<typename _CharT, typename _Traits> basic_ios<
_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
const basic_ios<_CharT, _Traits> & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that [rdbuf\(\)](#) and [rdstate\(\)](#) remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

5.373 std::basic_ofstream< _CharT, _Traits > Class Template Reference 1891

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), and std::ios_base::width().

5.373.5.7 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof() const [inline, inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file basic_ios.h.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), and std::basic_istream< _CharT, _Traits >::unget().

5.373.5.8 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions() const [inline, inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

5.373.5.9 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions(iostate __except) [inline, inherited]

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 247 of file `basic_ios.h`.

5.373.5.10 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::fail () const [inline,
inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.373.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file basic_ios.h.

5.373.5.12 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill () const [inline,
inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

5.373.5.13 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), and std::operator>>().

5.373.5.14 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.373.5.15 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

5.373.5.16 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.373.5.17 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::good () const [inline,
inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 170 of file basic_ios.h.

5.373.5.18 `template<typename _CharT , typename _Traits > locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)
[inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Reimplemented from [std::ios_base](#).

Definition at line 113 of file basic_ios.tcc.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

5.373.5.19 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.373.5.20 `template<typename _CharT, typename _Traits> bool
std::basic_ofstream<_CharT, _Traits>::is_open () [inline]`

Wrapper to test for an open file.

Returns

`rdbuf() -> is_open()`

Definition at line 679 of file fstream.

5.373.5.21 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.373.5.22 `template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

`c` The character to narrow.

`dfault` The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

5.373.5.23 `template<typename _CharT, typename _Traits> void
std::basic_ofstream<_CharT, _Traits>::open (const char * __s,
ios_base::openmode __mode = ios_base::out | ios_base::trunc)
[inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out|trunc)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 700 of file `fstream`.

5.373.5.24 `template<typename _CharT, typename _Traits> void
std::basic_ofstream<_CharT, _Traits>::open (const std::string &
__s, ios_base::openmode __mode = ios_base::out | ios_base::trunc
) [inline]`

Opens an external file.

Parameters

s The name of the file.

mode The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out|trunc)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 721 of file `fstream`.

5.373.5.25 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.373.5.26 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::operator! () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.373.5.27 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

5.373.5.28 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

5.373 std::basic_ofstream< _CharT, _Traits > Class Template Reference 1899

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 191 of file ostream.

```
5.373.5.29  template<typename _CharT, typename _Traits > basic_ofstream<
               _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits
               >::operator<<( __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.373.5.30  template<typename _CharT, typename _Traits> __ostream_type&
               std::basic_ofstream< _CharT, _Traits >::operator<<( ios_base
               &(*)(ios_base &) __pf ) [inline, inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 127 of file ostream.

5.373.5.31 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (unsigned
long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 204 of file ostream.

5.373.5.32 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (double __f
) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 209 of file ostream.

5.373.5.33 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (float __f)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 213 of file ostream.

5.373.5.34 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ofstream< _CharT, _Traits >::operator<< (long __n)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 165 of file ostream.

5.373.5.35 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ofstream< _CharT, _Traits >::operator<< (long double
__f) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 221 of file ostream.

5.373.5.36 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (const void *
__p) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 225 of file ostream.

5.373.5.37 `template<typename _CharT , typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits
>::operator<< (int __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.373.5.38 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (unsigned
long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 169 of file ostream.

5.373.5.39 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ofstream< _CharT, _Traits >::operator<< (bool __n)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 173 of file ostream.

5.373.5.40 `template<typename _CharT, typename _Traits> basic_ofstream<
_CharT, _Traits> & std::basic_ofstream< _CharT, _Traits
>::operator<< (short __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.373.5.41 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 200 of file ostream.

5.373.5.42 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.373.5.43 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ostream_type &(*)(__ostream_type &) __pf) [inline, inherited]`

Interface for manipulators.

5.373 std::basic_ofstream<_CharT, _Traits> Class Template Reference 1905

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

5.373.5.44 `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

5.373.5.45 `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

5.373.5.46 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (char_type __c) [inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

`*this`

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.373.5.47 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.373.5.48 `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_ofstream<_CharT, _Traits>::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 671 of file fstream.

5.373.5.49 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.373.5.50 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate () const [inline, inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.373.5.51 `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

- __fn* The function to add.
- __index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.373.5.52 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current write position.

Parameters

- off* A file offset object.
- dir* The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.373.5.53 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos) [inherited]`

Changing the current write position.

Parameters

- pos* A file position object.

Returns

*this

5.373 std::basic_ofstream< _CharT, _Traits > Class Template Reference 1909

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.373.5.54 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios_base.h.

5.373.5.55 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.373.5.56 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.373.5.57 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.373.5.58 `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits>::pos_type std::basic_ofstream<_CharT, _Traits>::tellp() [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.373.5.59 `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ofstream<_CharT, _Traits>* __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

5.373.5.60 `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.373.5.61 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.373.5.62 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::widen (char __c) const [inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.373.5.63 `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.373.5.64 `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::operator>>()`.

5.373.5.65 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]`

Character string insertion.

Parameters

s The array to insert.

n Maximum number of characters to insert.

Returns

`*this`

Characters are copied from *s* and inserted into the stream until one of the following happens:

- n characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

5.373.5.66 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.373.6 Member Data Documentation

5.373.6.1 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.373.6.2 `const openmode std::ios_base::app [static, inherited]`

Seek to end before each write.

Definition at line 363 of file `ios_base.h`.

5.373.6.3 const openmode std::ios_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 366 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.373.6.4 const iostate std::ios_base::badbit [static, inherited]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 333 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_istream< _CharT, _Traits >::unget().

5.373.6.5 const fmtflags std::ios_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 312 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.373.6.6 const seekdir std::ios_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file ios_base.h.

5.373.6.7 const openmode std::ios_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see ///

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

5.373.6.8 const fmtflags std::ios_base::boolalpha [static, inherited]

Insert/extract bool in alphabetic rather than numeric format.

Definition at line 257 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::num_put< _CharT, _OutIter >::do_put().

5.373.6.9 const seekdir std::ios_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.373.6.10 const fmtflags std::ios_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.373.6.11 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.373.6.12 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter

>::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.373.6.13 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.373.6.14 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.373.6.15 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 315 of file ios_base.h.

5.373.6.16 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),

`std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.373.6.17 `const fmtflags std::ios_base::hex` [**static, inherited**]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.373.6.18 `const openmode std::ios_base::in` [**static, inherited**]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.373.6.19 `const fmtflags std::ios_base::internal` [**static, inherited**]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 271 of file `ios_base.h`.

5.373.6.20 `const fmtflags std::ios_base::left` [**static, inherited**]

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.373.6.21 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.373.6.22 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.373.6.23 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.373.6.24 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.373.6.25 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.373.6.26 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.373.6.27 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file `ios_base.h`.

5.373.6.28 `const fmtflags std::ios_base::skipws` `[static, inherited]`

Skips leading white space before certain input operations.

Definition at line 299 of file `ios_base.h`.

5.373.6.29 `const openmode std::ios_base::trunc` `[static, inherited]`

Open for input. Default for `ofstream`.

Definition at line 380 of file `ios_base.h`.

5.373.6.30 `const fmtflags std::ios_base::unitbuf` `[static, inherited]`

Flushes output after each output operation.

Definition at line 302 of file `ios_base.h`.

5.373.6.31 `const fmtflags std::ios_base::uppercase` `[static, inherited]`

Replaces certain lowercase letters with their uppercase equivalents `///` in generated output.

Definition at line 306 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

The documentation for this class was generated from the following file:

- [fstream](#)

5.374 `std::basic_ostream<_CharT, _Traits>` Class Template Reference

Controlling output.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic_streambuf](#) to do the actual output.

Inheritance diagram for std::basic_ostream< _CharT, _Traits >:

Classes

- class `sentry`
Performs setup work for output streams.

Public Types

- typedef `ctype< _CharT > __ctype_type`
- typedef `basic_ios< _CharT, _Traits > __ios_type`

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

5.374.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_ostream< _-  
CharT, _Traits >
```

Controlling output.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic_streambuf](#) to do the actual output.

Definition at line 55 of file ostream.

5.374.2 Member Typedef Documentation

5.374.2.1 `template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_ostream< _CharT, _Traits
>::__ctype_type`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 71 of file ostream.

5.374.2.2 `template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_ios< _CharT, _Traits >::__num_get_type
[inherited]`

These are non-standard types.

Reimplemented in [std::basic_istream< _CharT, _Traits >](#), [std::basic_istream< char, _Traits >](#), and [std::basic_istream< char >](#).

Definition at line 86 of file basic_ios.h.

5.374.2.3 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> >
std::basic_ostream< _CharT, _Traits >::__num_put_type`

These are non-standard types.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 70 of file ostream.

5.374.2.4 `template<typename _CharT, typename _Traits> typedef _CharT std::basic_ostream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ofstream< _CharT, _Traits >](#), [std::basic_fstream< _CharT, _Traits >](#), [std::basic_iostream< _CharT, _Traits >](#), [std::basic_ostringstream< _CharT, _Traits, _Alloc >](#), [std::basic_stringstream< _CharT, _Traits, _Alloc >](#), and [std::basic_istream< char >](#).

Definition at line 59 of file ostream.

5.374.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int) [inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the [ios_base](#) object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios_base](#) and [basic_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 435 of file ios_base.h.

5.374.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`

- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file `ios_base.h`.

5.374.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_ostream< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ofstream< _CharT, _Traits >](#), [std::basic_fstream< _CharT, _Traits >](#), [std::basic_iostream< _CharT, _Traits >](#), [std::basic_ostringstream< _CharT, _Traits, _Alloc >](#), [std::basic_stringstream< _CharT, _Traits, _Alloc >](#), and [std::basic_istream< char >](#).

Definition at line 60 of file `ostream`.

5.374.2.8 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.374.2.9 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_ostream< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ofstream< _CharT, _Traits >](#), [std::basic_fstream< _CharT, _Traits >](#), [std::basic_iostream< _CharT, _Traits >](#), [std::basic_ostringstream< _CharT, _Traits, _Alloc >](#), [std::basic_stringstream< _CharT, _Traits, _Alloc >](#), and [std::basic_istream< char >](#).

Definition at line 62 of file `ostream`.

5.374.2.10 `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`

- out
- trunc

Definition at line 360 of file ios_base.h.

5.374.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_ostream< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 61 of file ostream.

5.374.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 392 of file ios_base.h.

5.374.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ostream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream<`

[_CharT, _Traits, _Alloc >](#), [std::basic_stringstream< _CharT, _Traits, _Alloc >](#), and [std::basic_istream< char >](#).

Definition at line 63 of file ostream.

5.374.3 Member Enumeration Documentation

5.374.3.1 enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during [imbue\(\)](#). copyfmt_event is used during copyfmt().

Definition at line 418 of file ios_base.h.

5.374.4 Constructor & Destructor Documentation

5.374.4.1 template<typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits >::basic_ostream (__streambuf_type * __sb) [inline, explicit]

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 82 of file ostream.

5.374.4.2 template<typename _CharT, typename _Traits> virtual std::basic_ostream< _CharT, _Traits >::~~basic_ostream () [inline, virtual]

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 91 of file ostream.

5.374.5 Member Function Documentation

5.374.5.1 const locale& std::ios_base::_M_getloc () const [inline, inherited]

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

5.374.5.2 `template<typename _CharT, typename _Traits> void
std::basic_ostream<_CharT, _Traits>::_M_write (const char_type
* __s, streamsize __n) [inline]`

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file `ostream`.

5.374.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits>::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

5.374.5.4 `template<typename _CharT, typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.374.5.5 `template<typename _CharT, typename _Traits > basic_ios<
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

5.374.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::eof () const [inline, inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file basic_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.374.5.7 `template<typename _CharT, typename _Traits> iostate
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,
inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.374.5.8 `template<typename _CharT, typename _Traits> void std::basic_ios<
_CharT, _Traits >::exceptions (iostate __except) [inline,
inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
```

```

#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}

```

Definition at line 247 of file basic_ios.h.

5.374.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const [inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file basic_ios.h.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.374.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill() const [inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.374.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios<_CharT, _Traits>::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.374.5.12 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.374.5.13 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.374.5.14 `template<typename _CharT, typename _Traits> basic_ostream<
_CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::flush
()`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, and `std::basic_ios< _CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

5.374.5.15 `locale std::ios_base::getloc() const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by `std::basic_ios< _CharT, _Traits>::copyfmt()`, `std::money_put< _CharT, _OutIter>::do_put()`, `std::basic_ios< _CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.374.5.16 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::good () const [inline,
inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.374.5.17 `template<typename _CharT , typename _Traits > locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)
[inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

5.374.5.18 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.374.5.19 long& std::ios_base::iword (int __ix) [inline, inherited]

Access to integer array.

Parameters

__ix Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file ios_base.h.

5.374.5.20 template<typename _CharT, typename _Traits> char std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char __dfault) const [inline, inherited]

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of *char_type* to a character of *char*, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file basic_ios.h.

5.374.5.21 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.374.5.22 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::operator! () const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.374.5.23 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

5.374.5.24 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

5.374 std::basic_ostream<_CharT, _Traits> Class Template Reference 1941

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.374.5.25 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (__streambuf_type * __sb)`

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.374.5.26 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (long __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 165 of file `ostream`.

5.374.5.27 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<(int __n)`

Basic arithmetic inserters.

Parameters

`A` variable of builtin type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.374.5.28 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<(__ostream_type &(*)(__ostream_type &) __pf) [inline]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 108 of file `ostream`.

5.374.5.29 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<(unsigned int __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 191 of file ostream.

5.374.5.30 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 169 of file ostream.

5.374.5.31 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 200 of file ostream.

5.374.5.32 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (unsigned
long long __n) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 204 of file ostream.

5.374.5.33 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (bool __n)
[inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 173 of file ostream.

5.374.5.34 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (const void *
__p) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 225 of file ostream.

5.374.5.35 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 209 of file ostream.

5.374.5.36 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `io manip` header.

Definition at line 127 of file ostream.

5.374.5.37 `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (short __n)`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References [std::ios_base::basefield](#), [std::ios_base::flags\(\)](#), [std::ios_base::hex](#), and [std::ios_base::oct](#).

5.374.5.38 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (float __f)
[inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 213 of file ostream.

5.374.5.39 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (long double
__f) [inline]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 221 of file ostream.

5.374.5.40 `streamsize std::ios_base::precision (streamsize __prec)
[inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

5.374.5.41 `streamsize std::ios_base::precision () const [inline,
inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

5.374.5.42 `template<typename _CharT , typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
char_type __c)`

Simple insertion.

Parameters

c The character to insert.

Returns

`*this`

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.374.5.43 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

`__ix` Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.374.5.44 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

Parameters

`sb` The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

5.374 std::basic_ostream< _CharT, _Traits > Class Template Reference 1949

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::clear().

5.374.5.45 `template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,
_Traits>::rdbuf() const [inline, inherited]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), [std::basic_ofstream< _CharT, _Traits >](#), [std::basic_fstream< _CharT, _Traits >](#), [std::basic_istream< _CharT, _Traits, _Alloc >](#), [std::basic_ostringstream< _CharT, _Traits, _Alloc >](#), and [std::basic_stringstream< _CharT, _Traits, _Alloc >](#).

Definition at line 311 of file basic_ios.h.

Referenced by [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_ios< _CharT, _Traits >::imbue\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_ostream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::read\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

5.374.5.46 `template<typename _CharT, typename _Traits> iostate
std::basic_ios<_CharT, _Traits>::rdstate() const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See [std::ios_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

5.374.5.47 `void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.374.5.48 `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::seekp (pos_type __pos)`

Changing the current write position.

Parameters

`pos` A file position object.

Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, and `std::basic_ios< _CharT, _Traits>::setstate()`.

5.374.5.49 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (off_type __off, ios_base::seekdir __dir)`

Changing the current write position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.374.5.50 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file ios_base.h.

5.374.5.51 `fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file ios_base.h.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.374.5.52 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file basic_ios.h.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.374.5.53 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.374.5.54 `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits>::pos_type std::basic_ostream< _CharT, _Traits>::tellp ()`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits>::rdbuf()`.

5.374.5.55 `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits>* std::basic_ios< _CharT, _Traits>::tie () const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits>::copyfmt()`.

5.374.5.56 `template<typename _CharT, typename _Traits>
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie (basic_ostream<_CharT, _Traits> * __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file `basic_ios.h`.

5.374.5.57 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.374.5.58 `template<typename _CharT, typename _Traits> char_type
 std::basic_ios<_CharT, _Traits>::widen (char __c) const
 [inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

5.374 std::basic_ostream<_CharT, _Traits> Class Template Reference 1955

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.374.5.59 streamsize std::ios_base::width () const [inline, inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutT, _Traits>::do_put()`, and `std::operator>>()`.

5.374.5.60 streamsize std::ios_base::width (streamsize __wide) [inline, inherited]

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.374.5.61 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::write (const char_type * __s, streamsize __n)

Character string insertion.

Parameters

- s* The array to insert.
- n* Maximum number of characters to insert.

Returns

*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

5.374.5.62 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.374.6 Member Data Documentation

5.374.6.1 `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

5.374.6.2 const openmode std::ios_base::app [static, inherited]

Seek to end before each write.

Definition at line 363 of file ios_base.h.

5.374.6.3 const openmode std::ios_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 366 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.374.6.4 const iostate std::ios_base::badbit [static, inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 333 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_istream< _CharT, _Traits >::unget().

5.374.6.5 const fmtflags std::ios_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 312 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.374.6.6 const seekdir std::ios_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file ios_base.h.

5.374.6.7 const openmode std::ios_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

5.374.6.8 const fmtflags std::ios_base::boolalpha [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::num_put< _CharT, _OutIter >::do_put().

5.374.6.9 const seekdir std::ios_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.374.6.10 const fmtflags std::ios_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.374.6.11 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.374.6.12 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.374.6.13 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.374.6.14 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.374.6.15 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 315 of file ios_base.h.

5.374.6.16 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.374.6.17 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.374.6.18 const openmode std::ios_base::in [static, inherited]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.374.6.19 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.374.6.20 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.374.6.21 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.374.6.22 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.374.6.23 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.374.6.24 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.374.6.25 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.374.6.26 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.374.6.27 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.374.6.28 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.374.6.29 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for ofstream.

Definition at line 380 of file ios_base.h.

5.374.6.30 const fmtflags std::ios_base::unitbuf [static, inherited]

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.374.6.31 const fmtflags std::ios_base::uppercase [static, inherited]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by std::num_put<_CharT, _OutIter >::do_put().

5.375 `std::basic_ostream< _CharT, _Traits >::sentry` Class Reference

Performs setup work for output streams.

Public Member Functions

- `sentry` (`basic_ostream< _CharT, _Traits > &__os`)
- `~sentry` ()
- `operator bool` () const

5.375.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ostream< _CharT, _Traits >::sentry`

Performs setup work for output streams. Objects of this class are created before all of the standard inserters are run. It is responsible for *exception-safe prefix and suffix operations*.

Definition at line 377 of file ostream.

5.375.2 Constructor & Destructor Documentation

5.375.2.1 `template<typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits >::sentry::sentry (
basic_ostream< _CharT, _Traits > & __os) [explicit]`

The constructor performs preparatory work.

Parameters

os The output stream to guard.

If the stream state is good (*os.good()* is true), then if the stream is tied to another output stream, *is.tie()* -> `flush()` is called to synchronize the output sequences.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file ostream.tcc.

5.375.2.2 `template<typename _CharT, typename _Traits>`
`std::basic_ostream< _CharT, _Traits >::sentry::~sentry ()`
`[inline]`

Possibly flushes the stream.

If `ios_base::unitbuf` is set in `os.flags()`, and `std::uncaught_exception()` is true, the sentry destructor calls `flush()` on the output stream.

Definition at line 405 of file `ostream`.

References `std::uncaught_exception()`.

5.375.3 Member Function Documentation

5.375.3.1 `template<typename _CharT, typename _Traits>`
`std::basic_ostream< _CharT, _Traits >::sentry::operator bool ()`
`const [inline, explicit]`

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (`true == okay`).

Definition at line 426 of file `ostream`.

The documentation for this class was generated from the following files:

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`

- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

5.376.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc> class
std::basic_ostringstream<_CharT, _Traits, _Alloc>
```

Controlling output for `std::string`.

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 366 of file `sstream`.

5.376.2 Member Typedef Documentation

5.376.2.1 `template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_ostream<_CharT, _Traits
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file `ostream`.

5.376.2.2 `template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_ios<_CharT, _Traits>::__num_get_type
[inherited]`

These are non-standard types.

Reimplemented in [std::basic_istream<_CharT, _Traits>](#), [std::basic_istream<char, _Traits>](#), and [std::basic_istream<char>](#).

Definition at line 86 of file `basic_ios.h`.

5.376.2.3 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ostream<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file `ostream`.

5.376.2.4 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef _CharT std::basic_ostringstream<_CharT, _Traits, _Alloc
>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Definition at line 370 of file `sstream`.

5.376.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`
[inherited]

The type of an event callback function.

Parameters

- event* One of the members of the event enum.
- ios_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.376.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1973

- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 254 of file ios_base.h.

5.376.2.7 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef traits_type::int_type std::basic_ostringstream< _CharT,
_Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream< _CharT, _Traits >](#).

Definition at line 375 of file sstream.

5.376.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 329 of file ios_base.h.

5.376.2.9 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef traits_type::off_type std::basic_ostringstream< _CharT,
_Traits, _Alloc >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Definition at line 377 of file sstream.

5.376.2.10 `typedef _Ios_Openmode std::ios_base::openmode` **[inherited]**

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.376.2.11 `template<typename _CharT, typename _Traits, typename _Alloc>` `typedef traits_type::pos_type std::basic_ostringstream<_CharT,` `_Traits, _Alloc>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream<_CharT, _Traits>](#).

Definition at line 376 of file sstream.

5.376.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` **[inherited]**

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1975

Definition at line 392 of file ios_base.h.

5.376.2.13 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef _Traits std::basic_ostringstream< _CharT, _Traits, _Alloc
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ostream< _CharT, _Traits >](#).

Definition at line 371 of file sstream.

5.376.3 Member Enumeration Documentation

5.376.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during [imbue\(\)](#). copyfmt_event is used during copyfmt().

Definition at line 418 of file ios_base.h.

5.376.4 Constructor & Destructor Documentation

5.376.4.1 `template<typename _CharT, typename _Traits, typename
_Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc
>::basic_ostringstream (ios_base::openmode __mode =
ios_base::out) [inline, explicit]`

Default constructor starts with an empty string buffer.

Parameters

mode Whether the buffer can read, or write, or both.

[ios_base::out](#) is automatically included in *mode*.

Initializes sb using mode|out, and passes &sb to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 402 of file sstream.

5.376.4.2 `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc>::basic_ostringstream (const __string_type & __str, ios_base::openmode __mode = ios_base::out) [inline, explicit]`

Starts with an existing string buffer.

Parameters

str A string to copy as a starting buffer.

mode Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes *sb* using *str* and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 420 of file `sstream`.

5.376.4.3 `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc>::~~basic_ostringstream () [inline]`

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 431 of file `sstream`.

5.376.5 Member Function Documentation

5.376.5.1 `const locale& std::ios_base::_M_getloc () const [inline, inherited]`

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get<`

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1977

_CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

5.376.5.2 `template<typename _CharT, typename _Traits> void
std::basic_ostream< _CharT, _Traits >::_M_write (const char_type
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

*this

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file ostream.

5.376.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits >::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file basic_ios.h.

5.376.5.4 `template<typename _CharT, typename _Traits > void
std::basic_ios< _CharT, _Traits >::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.376.5.5 `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (const basic_ios<_CharT, _Traits> & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

`__rhs` The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

5.376.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof() const [inline, inherited]`

Fast error checking.

Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

Definition at line 180 of file `basic_ios.h`.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1979

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), and std::basic_istream< _CharT, _Traits >::unget().

5.376.5.7 `template<typename _CharT, typename _Traits> iostate
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,
inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

5.376.5.8 `template<typename _CharT, typename _Traits> void std::basic_ios<
_CharT, _Traits >::exceptions (iostate __except) [inline,
inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");
```

```

std::cerr << "Setting badbit\n";
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}

```

Definition at line 247 of file `basic_ios.h`.

5.376.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const` `[inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.376.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill() const` `[inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1981

5.376.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios< _CharT, _Traits >::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.376.5.12 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.376.5.13 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline, inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.376.5.14 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

5.376.5.15 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.376.5.16 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good () const [inline, inherited]`

Fast error checking.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1983

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 170 of file basic_ios.h.

5.376.5.17 `template<typename _CharT , typename _Traits > locale
std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc)
[inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Reimplemented from [std::ios_base](#).

Definition at line 113 of file basic_ios.tcc.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

5.376.5.18 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::init (basic_streambuf<
_CharT, _Traits > * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file basic_ios.tcc.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.376.5.19 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

`__ix` Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file `ios_base.h`.

5.376.5.20 `template<typename _CharT, typename _Traits> char
std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

`c` The character to narrow.

`dfault` The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 420 of file `basic_ios.h`.

5.376.5.21 `template<typename _CharT, typename _Traits> std::basic_ios<
_CharT, _Traits >::operator void * () const [inline,
inherited]`

The quick-and-easy status check.

5.376 std::basic_ostringstream<_CharT, _Traits, _Alloc> Class Template Reference 1985

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.376.5.22 `template<typename _CharT, typename _Traits> bool
std::basic_ios<_CharT, _Traits>::operator! () const
[inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.376.5.23 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream<_CharT, _Traits>::operator<< (long __n)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 165 of file `ostream`.

5.376.5.24 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream<_CharT, _Traits>::operator<< (double __f
) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 209 of file ostream.

5.376.5.25 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (
__ostream_type &(*)(__ostream_type &) __pf) [inline,
inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `omanip` header.

Definition at line 108 of file ostream.

5.376.5.26 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (long double
__f) [inline, inherited]`

Basic arithmetic inserters.

Parameters

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 221 of file ostream.

5.376.5.27 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (bool __n)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1987

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 173 of file ostream.

5.376.5.28 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * __p) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 225 of file ostream.

5.376.5.29 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 117 of file ostream.

5.376.5.30 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]`

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ostream<_CharT, _Traits>::rdbuf()`, and `std::basic_ostream<_CharT, _Traits>::setstate()`.

5.376.5.31 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 200 of file ostream.

5.376.5.32 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (unsigned short __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1989

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.376.5.33 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<<(int __n) [inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.376.5.34 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<<(ios_base &(*)(ios_base &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `omanip` header.

Definition at line 127 of file ostream.

5.376.5.35 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<<(unsigned int __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 191 of file ostream.

```
5.376.5.36  template<typename _CharT, typename _Traits> __ostream_type&  
             std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned  
             long __n ) [inline, inherited]
```

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 169 of file ostream.

```
5.376.5.37  template<typename _CharT , typename _Traits > basic_ostream<  
             _CharT, _Traits > & std::basic_ostream< _CharT, _Traits  
             >::operator<< ( short __n ) [inherited]
```

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1991

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

5.376.5.38 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float __f) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 213 of file ostream.

5.376.5.39 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 204 of file ostream.

5.376.5.40 `streamsize std::ios_base::precision (streamsize __prec) [inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file `ios_base.h`.

5.376.5.41 `streamsize std::ios_base::precision () const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

5.376.5.42 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

**this*

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1993

5.376.5.43 void*& std::ios_base::pword (int __ix) [inline, inherited]

Access to void pointer array.

Parameters

__ix Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.376.5.44 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

5.376.5.45 `template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type* std::basic_ostringstream<_CharT, _Traits,
_Alloc>::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 442 of file `sstream`.

5.376.5.46 `template<typename _CharT, typename _Traits> iostate
std::basic_ios<_CharT, _Traits>::rdstate () const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 127 of file `basic_ios.h`.

5.376.5.47 `void std::ios_base::register_callback (event_callback __fn, int
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template
Reference **1995**

5.376.5.48 `template<typename _CharT, typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp
(pos_type __pos) [inherited]`

Changing the current write position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.376.5.49 `template<typename _CharT, typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp
(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current write position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.376.5.50 `fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask)`
[inline, inherited]

Setting new format flags.

Parameters

fmtfl Additional flags to set.
mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.376.5.51 `fmtflags std::ios_base::setf (fmtflags __fmtfl)` **[inline, inherited]**

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.376.5.52 `template<typename _CharT, typename _Traits> void`
`std::basic_ios< _CharT, _Traits >::setstate (iostate __state)`
[inline, inherited]

Sets additional flags in the error state.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 1997

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.376.5.53 `template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc
>::str () const [inline]`

Copying out the string buffer.

Returns

`rddbuf ()->str ()`

Definition at line 450 of file `sstream`.

Referenced by `std::operator<<()`.

5.376.5.54 `template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (
const __string_type & __s) [inline]`

Setting a new buffer.

Parameters

s The string to use as a new sequence.

Calls `rddbuf ()->str (s)`.

Definition at line 460 of file `sstream`.

5.376.5.55 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.376.5.56 `template<typename _CharT, typename _Traits> basic_ostream<
_CharT, _Traits>::pos_type std::basic_ostream< _CharT, _Traits
>::tellp () [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits>::rddbuf()`.

5.376.5.57 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits
>::tie () const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

5.376 std::basic_ostringstream<_CharT, _Traits, _Alloc> Class Template Reference 1999

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 285 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

```
5.376.5.58 template<typename _CharT, typename _Traits>
    basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>
    >::tie ( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,
    inherited]
```

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 297 of file `basic_ios.h`.

```
5.376.5.59 void std::ios_base::unsetf ( fmtflags __mask ) [inline,
    inherited]
```

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

```
5.376.5.60 template<typename _CharT, typename _Traits> char_type
    std::basic_ios<_CharT, _Traits>::widen ( char __c ) const
    [inline, inherited]
```

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.376.5.61 `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.376.5.62 `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 2001

5.376.5.63 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]`

Character string insertion.

Parameters

- s* The array to insert.
- n* Maximum number of characters to insert.

Returns

*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

5.376.5.64 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.376.6 Member Data Documentation

5.376.6.1 `const fmtflags std::ios_base::adjustfield` `[static, inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`.

5.376.6.2 `const openmode std::ios_base::app` `[static, inherited]`

Seek to end before each write.

Definition at line 363 of file `ios_base.h`.

5.376.6.3 `const openmode std::ios_base::ate` `[static, inherited]`

Open and seek to end immediately after opening.

Definition at line 366 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

5.376.6.4 `const iostate std::ios_base::badbit` `[static, inherited]`

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 333 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.376.6.5 const fmtflags std::ios_base::basefield [static, inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.376.6.6 const seekdir std::ios_base::beg [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file `ios_base.h`.

5.376.6.7 const openmode std::ios_base::binary [static, inherited]

Perform input and output in binary mode (as opposed to text mode). `/// This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.`

Definition at line 371 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

5.376.6.8 const fmtflags std::ios_base::boolalpha [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

5.376.6.9 const seekdir std::ios_base::cur [static, inherited]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.376.6.10 const fmtflags std::ios_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.376.6.11 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.376.6.12 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsomewhat(), and std::ws().

5.376.6.13 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.376.6.14 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.376 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference 2005

5.376.6.15 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 315 of file `ios_base.h`.

5.376.6.16 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.376.6.17 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.376.6.18 const openmode std::ios_base::in [static, inherited]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.376.6.19 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to `right` if no such point is /// designated.

Definition at line 271 of file `ios_base.h`.

5.376.6.20 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

5.376.6.21 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::operator<<()`.

5.376.6.22 const openmode std::ios_base::out [static, inherited]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

5.376.6.23 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file `ios_base.h`.

5.376.6.24 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file `ios_base.h`.

5.376.6.25 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.376.6.26 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.376.6.27 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.376.6.28 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.376.6.29 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for ofstream.

Definition at line 380 of file ios_base.h.

5.376.6.30 const fmtflags std::ios_base::unitbuf [static, inherited]

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.376.6.31 const fmtflags std::ios_base::uppercase [static, inherited]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.377.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> class std::basic_regex< _Ch_type, _Rx_traits >
```

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

Definition at line 340 of file `regex.h`.

5.377.2 Constructor & Destructor Documentation

5.377.2.1 `template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits >::basic_regex () [inline]`

Constructs a basic regular expression that does not match any character sequence.

Definition at line 382 of file `regex.h`.

5.377.2.2 `template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (const _Ch_type * __p, flag_type __f = regex_constants::ECMAScript) [inline, explicit]`

Constructs a basic regular expression from the sequence `[p, p + char_traits<_Ch_type>::length(p))` interpreted according to the flags in `f`.

Parameters

p A pointer to the start of a C-style null-terminated string containing a regular expression.

f Flags indicating the syntax rules and options.

Exceptions

regex_error if *p* is not a valid regular expression.

Definition at line 400 of file `regex.h`.

5.377 std::basic_regex< _Ch_type, _Rx_traits > Class Template Reference 2011

5.377.2.3 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits
>::basic_regex (const _Ch_type * __p, std::size_t __len, flag_type
__f) [inline]`

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in f.

Parameters

- p* A pointer to the start of a string containing a regular expression.
- len* The length of the string containing the regular expression.
- f* Flags indicating the syntax rules and options.

Exceptions

- regex_error* if p is not a valid regular expression.

Definition at line 418 of file regex.h.

5.377.2.4 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits
>::basic_regex (const basic_regex< _Ch_type, _Rx_traits > &
__rhs) [inline]`

Copy-constructs a basic regular expression.

Parameters

- rhs* A regex object.

Definition at line 428 of file regex.h.

5.377.2.5 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits
>::basic_regex (const basic_regex< _Ch_type, _Rx_traits > &&
__rhs) [inline]`

Move-constructs a basic regular expression.

Parameters

- rhs* A regex object.

Definition at line 438 of file regex.h.

5.377.2.6 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _Ch_traits ,
 typename _Ch_alloc > std::basic_regex< _Ch_type, _Rx_traits
 >::basic_regex (const std::basic_string< _Ch_type, _Ch_traits,
 _Ch_alloc > & __s, flag_type __f= regex_constants::ECMAScript)
 [inline, explicit]`

Constructs a basic regular expression from the string *s* interpreted according to the flags in *f*.

Parameters

s A string containing a regular expression.

f Flags indicating the syntax rules and options.

Exceptions

regex_error if *s* is not a valid regular expression.

Definition at line 454 of file regex.h.

5.377.2.7 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _InputIterator
 > std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 _InputIterator __first, _InputIterator __last, flag_type __f=
 regex_constants::ECMAScript) [inline]`

Constructs a basic regular expression from the range [*first*, *last*) interpreted according to the flags in *f*.

Parameters

first The start of a range containing a valid regular expression.

last The end of a range containing a valid regular expression.

f The format flags of the regular expression.

Exceptions

regex_error if [*first*, *last*) is not a valid regular expression.

Definition at line 476 of file regex.h.

5.377.2.8 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits
>::basic_regex (initializer_list<_Ch_type> __l, flag_type __f =
regex_constants::ECMAScript) [inline]`

Constructs a basic regular expression from an initializer list.

Parameters

l The initializer list.

f The format flags of the regular expression.

Exceptions

[*regex_error*](#) if *l* is not a valid regular expression.

Definition at line 490 of file regex.h.

5.377.2.9 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits
>::~~basic_regex () [inline]`

Destroys a basic regular expression.

Definition at line 500 of file regex.h.

5.377.3 Member Function Documentation

5.377.3.1 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> basic_regex& std::basic_regex<
_Ch_type, _Rx_traits>::assign (const basic_regex< _Ch_type,
_Rx_traits> & __rhs) [inline]`

the real assignment operator.

Parameters

rhs Another regular expression object.

Definition at line 546 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::operator=().

5.377.3.2 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<
 _Ch_type, _Rx_traits >::assign (const _Ch_type * __p, std::size_t
 __len, flag_type __flags) [inline]`

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

Parameters

- p* A pointer to a C-style string containing a regular expression pattern.
- len* The length of the regular expression pattern string.
- flags* Syntax option flags.

Exceptions

- [*regex_error*](#) if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If [*regex_error*](#) is thrown, **this* remains unchanged.

Definition at line 598 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

5.377.3.3 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _Ch_type, traits_type,
 typename _Allocator > basic_regex& std::basic_regex< _Ch_type,
 _Rx_traits >::assign (const basic_string< _Ch_type, _Ch_type_traits,
 _Allocator > & __s, flag_type __f = regex_constants::ECMAScript
) [inline]`

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

Parameters

- s* A string containing a regular expression pattern.
- flags* Syntax option flags.

Exceptions

- [*regex_error*](#) if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If [*regex_error*](#) is thrown, **this* remains unchanged.

Definition at line 614 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::swap()`.

5.377.3.4 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> template<typename _InputIterator >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
_InputIterator __first, _InputIterator __last, flag_type __flags =
regex_constants::ECMAScript) [inline]`

Assigns a new regular expression to a regex object.

Parameters

first The start of a range containing a valid regular expression.

last The end of a range containing a valid regular expression.

flags Syntax option flags.

Exceptions

[*regex_error*](#) if p does not contain a valid regular expression pattern interpreted according to flags. If [*regex_error*](#) is thrown, the object remains unchanged.

Definition at line 637 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

5.377.3.6 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<
 _Ch_type, _Rx_traits >::assign (basic_regex< _Ch_type, _Rx_traits
 > && __rhs) [inline]`

The move-assignment operator.

Parameters

rhs Another regular expression object.

Definition at line 559 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::swap()`.

5.377.3.7 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<
 _Ch_type, _Rx_traits >::assign (const _Ch_type * __p, flag_type
 __flags = regex_constants::ECMAScript) [inline]`

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

Parameters

p A pointer to a C-style null-terminated string containing a regular expression pattern.

flags Syntax option flags.

Exceptions

[*regex_error*](#) if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If [*regex_error*](#) is thrown, *this remains unchanged.

Definition at line 580 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

5.377.3.8 `template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> flag_type std::basic_regex< _Ch_type,
 _Rx_traits >::flags () const [inline]`

Gets the flags used to construct the regular expression or in the last call to [`assign\(\)`](#).

Definition at line 670 of file regex.h.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::operator=()`.

5.377.3.9 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type,
_Rx_traits >::getloc () const [inline]`

Gets the locale currently imbued in the regular expression object.

Definition at line 688 of file regex.h.

5.377.3.10 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type,
_Rx_traits >::imbue (locale_type __loc) [inline]`

Imbues the regular expression object with the given locale.

Parameters

loc A locale.

Definition at line 680 of file regex.h.

5.377.3.11 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> unsigned int std::basic_regex<
_Ch_type, _Rx_traits >::mark_count () const [inline]`

Gets the number of marked subexpressions within the regular expression.

Definition at line 662 of file regex.h.

5.377.3.12 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> basic_regex& std::basic_regex<
_Ch_type, _Rx_traits >::operator= (basic_regex< _Ch_type,
_Rx_traits > && __rhs) [inline]`

Move-assigns one regular expression to another.

Definition at line 514 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

5.377.3.13 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> basic_regex& std::basic_regex<
_Ch_type, _Rx_traits >::operator= (const basic_regex< _Ch_type,
_Rx_traits > & __rhs) [inline]`

Assigns one regular expression to another.

Definition at line 507 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

5.377.3.14 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> template<typename _Ch_type, _Rx_traits,
typename _Allocator > basic_regex& std::basic_regex< _Ch_type,
_Rx_traits >::operator= (const basic_string< _Ch_type,
_Ch_type, _Allocator > & __s) [inline]`

Replaces a regular expression with a new one constructed from a string.

Parameters

A pointer to a string containing a regular expression.

Definition at line 536 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, and `std::basic_regex< _Ch_type, _Rx_traits >::flags()`.

5.377.3.15 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> basic_regex& std::basic_regex<
_Ch_type, _Rx_traits >::operator= (const _Ch_type * __p)
[inline]`

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

Parameters

A pointer to the start of a null-terminated C-style string containing a regular expression.

Definition at line 525 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, and `std::basic_regex< _Ch_type, _Rx_traits >::flags()`.

5.377.3.16 `template<typename _Ch_type, typename _Rx_traits =
regex_traits<_Ch_type>> void std::basic_regex< _Ch_type,
_Rx_traits >::swap (basic_regex< _Ch_type, _Rx_traits > &
__rhs) [inline]`

Swaps the contents of two regular expression objects.

Parameters

rhs Another regular expression object.

Definition at line 698 of file regex.h.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, and `std::swap()`.

5.378.1 Detailed Description

```
template<typename _CharT, typename _Traits> class std::basic_streambuf< _  
_CharT, _Traits >
```

The actual work of input and output (interface).

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output. Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
 - The controlled input sequence can be not readable.
 - The controlled output sequence can be not writable.
 - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
 - The controlled sequences can support operations *directly* to or from associated sequences.
 - The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.
2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
 - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
 - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
 - the *end pointer*, or first element address beyond the end of the array (called *xend* here).
3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
 - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.

- If *xnext* is not a null pointer and *xnext* < *xend* for an output sequence, then a *write position* is available. In this case, **xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
- If *xnext* is not a null pointer and *xbeg* < *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
- If *xnext* is not a null pointer and *xnext* < *xend* for an input sequence, then a *read position* is available. In this case, **xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

5.378.2 Member Typedef Documentation

5.378.2.1 `template<typename _CharT, typename _Traits> typedef basic_streambuf<char_type, traits_type> std::basic_streambuf<_CharT, _Traits >::__streambuf_type`

This is a non-standard type.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 133 of file `streambuf`.

5.378.2.2 `template<typename _CharT, typename _Traits> typedef _CharT std::basic_streambuf< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 124 of file `streambuf`.

5.378.2.3 `template<typename _CharT, typename _Traits> typedef traits_type::int_type std::basic_streambuf< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 126 of file streambuf.

5.378.2.4 `template<typename _CharT, typename _Traits> typedef traits_type::off_type std::basic_streambuf< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 128 of file streambuf.

5.378.2.5 `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::enc_filebuf< _CharT >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 127 of file streambuf.

5.378.2.6 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::enc_filebuf< _CharT >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 125 of file streambuf.

5.378.3 Constructor & Destructor Documentation

5.378.3.1 `template<typename _CharT, typename _Traits> virtual std::basic_streambuf< _CharT, _Traits >::~~basic_streambuf () [inline, virtual]`

Destructor deallocates no buffer space.

Definition at line 193 of file streambuf.

5.378.3.2 `template<typename _CharT, typename _Traits> std::basic_streambuf< _CharT, _Traits >::basic_streambuf () [inline, protected]`

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the [basic_streambuf](#) class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 441 of file streambuf.

5.378.4 Member Function Documentation

5.378.4.1 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::eback () const
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 460 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.378.4.2 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::egptr () const
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 466 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.378.4.3 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::epptr () const
[inline, protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 513 of file streambuf.

Referenced by std::basic_streambuf< _CharT, _Traits >::xsputn().

5.378.4.4 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::gbump (int __n)
[inline, protected]`

Moving the read position.

Parameters

n The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file streambuf.

5.378.4.5 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf< _CharT, _Traits >::getloc () const
[inline]`

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent loc is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 222 of file streambuf.

5.378.4.6 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::gptr () const
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 463 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.378.4.7 `template<typename _CharT, typename _Traits> virtual void
std::basic_streambuf< _CharT, _Traits >::imbue (const locale &)
[inline, protected, virtual]`

Changes translations.

Parameters

loc A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in [std::basic_filebuf< _CharT, _Traits >](#), [std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >](#), and [std::basic_filebuf< char_type, traits_type >](#).

Definition at line 554 of file streambuf.

5.378.4.8 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::in_avail () [inline]`

Looking ahead into the stream.

Returns

The number of characters available.

5.378 std::basic_streambuf<_CharT, _Traits> Class Template Reference 2029

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 262 of file streambuf.

5.378.4.9 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf<_CharT, _Traits>::overflow (int_type =
traits_type::eof()) [inline, protected, virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

c An additional character to consume.

Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns `eof()`.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 746 of file streambuf.

Referenced by `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

5.378.4.10 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf<_CharT, _Traits>::pbackfail (int_type =
traits_type::eof()) [inline, protected, virtual]`

Tries to back up the input sequence.

Parameters

c The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 702 of file streambuf.

5.378.4.11 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf<_CharT, _Traits>::pbase () const
[inline, protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 507 of file streambuf.

Referenced by `std::basic_filebuf<_CharT, _Traits>::sync()`.

5.378.4.12 `template<typename _CharT, typename _Traits> void
std::basic_streambuf<_CharT, _Traits>::pbump (int __n)
[inline, protected]`

Moving the write position.

Parameters

n The delta by which to move.

This just advances the write position without returning any data.

Definition at line 523 of file streambuf.

Referenced by `std::basic_streambuf<_CharT, _Traits>::xspn()`.

5.378.4.13 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::pptr () const
[inline, protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 510 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::sync()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

5.378.4.14 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale
& __loc) [inline]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 205 of file streambuf.

5.378.4.15 `template<typename _CharT, typename _Traits> pos_type
std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type
__off, ios_base::seekdir __way, ios_base::openmode __mode =
ios_base::in | ios_base::out) [inline]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 239 of file `streambuf`.

```
5.378.4.16  template<typename _CharT, typename _Traits> pos_type
             std::basic_streambuf< _CharT, _Traits >::pubseekpos ( pos_type
             __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )
             [inline]
```

Entry point for `imbue()`.

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 244 of file `streambuf`.

```
5.378.4.17  template<typename _CharT, typename _Traits>
             __streambuf_type* std::basic_streambuf< _CharT, _Traits
             >::pubsetbuf ( char_type * __s, streamsize __n ) [inline]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 235 of file `streambuf`.

```
5.378.4.18  template<typename _CharT, typename _Traits> int
             std::basic_streambuf< _CharT, _Traits >::pubsync ( )
             [inline]
```

Entry point for `imbue()`.

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 249 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

5.378.4.19 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sbumpc() [inline]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 294 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::istreambuf_iterator< _CharT, _Traits >::operator++().

5.378.4.20 `template<typename _CharT, typename _Traits> virtual
pos_type std::basic_streambuf< _CharT, _Traits >::seekoff
(off_type, ios_base::seekdir, ios_base::openmode =
ios_base::in | ios_base::out) [inline, protected,
virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 580 of file streambuf.

5.378.4.21 `template<typename _CharT, typename _Traits> virtual pos_type
std::basic_streambuf< _CharT, _Traits >::seekpos (pos_type,
ios_base::openmode = ios_base::in | ios_base::out) [inline,
protected, virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 592 of file `streambuf`.

5.378.4.22 `template<typename _CharT, typename _Traits> virtual
basic_streambuf<char_type,_Traits>* std::basic_streambuf<
_CharT, _Traits >::setbuf (char_type *, streamsize) [inline,
protected, virtual]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

Note

Base class version does nothing, returns `this`.

Definition at line 569 of file `streambuf`.

5.378.4.23 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::setg (char_type *
__gbeg, char_type * __gnext, char_type * __gend) [inline,
protected]`

Setting the three read area pointers.

Parameters

gbeg A pointer.

gnext A pointer.

gend A pointer.

Postcondition

gbeg == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 487 of file streambuf.

5.378.4.24 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::setp (char_type *
__pbeg, char_type * __pend) [inline, protected]`

Setting the three write area pointers.

Parameters

pbeg A pointer.

pend A pointer.

Postcondition

pbeg == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 533 of file streambuf.

5.378.4.25 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sgetc () [inline]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

5.378.4.26 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s,
streamsize __n) [inline]`

Entry point for `xsgetn`.

Parameters

s A buffer area.

n A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 335 of file `streambuf`.

5.378.4.27 `template<typename _CharT, typename _Traits> virtual streamsize
std::basic_streambuf< _CharT, _Traits >::showmanyc ()
[inline, protected, virtual]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.
[27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 627 of file `streambuf`.

5.378.4.28 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::snextc () [inline]`

Getting the next character.

Returns

The next character, or eof.

5.378 std::basic_streambuf<_CharT, _Traits> Class Template Reference 2037

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 276 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.378.4.29 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf<_CharT, _Traits>::sputbackc (char_type
__c) [inline]`

Pushing characters back into the input stream.

Parameters

`c` The character to push back.

Returns

The previous character, if possible.

Similar to `sungetc()`, but `c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `c`.

Definition at line 350 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

5.378.4.30 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf<_CharT, _Traits>::sputc (char_type __c)
[inline]`

Entry point for all single-character output functions.

Parameters

`c` A character to output.

Returns

`c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `c` in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, and `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

5.378.4.31 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::sputn (const char_type
* __s, streamsize __n) [inline]`

Entry point for all single-character output functions.

Parameters

s A buffer read area.

n A count.

One of two public output functions.

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file streambuf.

5.378.4.32 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::stossc () [inline]`

Tosses a character.

Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file streambuf.

5.378.4.33 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `ebackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 375 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

5.378.4.34 `template<typename _CharT, typename _Traits> virtual int
std::basic_streambuf< _CharT, _Traits >::sync (void)
[inline, protected, virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in [std::basic_filebuf< _CharT, _Traits >](#), [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#), [std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >](#), and [std::basic_filebuf< char_type, traits_type >](#).

Definition at line 605 of file streambuf.

5.378.4.35 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf< _CharT, _Traits >::uflow () [inline,
protected, virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as [underflow\(\)](#), and in fact is required to call that function. It also returns the new character, like [underflow\(\)](#) does. However, this function also moves the read position forward by one.

Reimplemented in [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#).

Definition at line 678 of file streambuf.

5.378.4.36 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf< _CharT, _Traits >::underflow ()
[inline, protected, virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 665 of file streambuf.

5.378.4.37 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf< _CharT, _Traits >::xsgetn (char_type *
__s, streamsize __n) [protected, virtual]`

Multiple character extraction.

Parameters

s A buffer area.

n Maximum number of characters to assign.

Returns

The number of characters assigned.

5.378 std::basic_streambuf<_CharT, _Traits> Class Template Reference 2041

Fills $s[0]$ through $s[n-1]$ with characters from the input sequence, as if by `sbumpc()`. Stops when either n characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 45 of file `streambuf.tcc`.

References `std::min()`.

```
5.378.4.38  template<typename _CharT, typename _Traits> streamsize
               std::basic_streambuf<_CharT, _Traits>::xsputn( const char_type
               * __s, streamsize __n ) [protected, virtual]
```

Multiple character insertion.

Parameters

s A buffer area.

n Maximum number of characters to write.

Returns

The number of characters written.

Writes $s[0]$ through $s[n-1]$ to the output sequence, as if by `sputc()`. Stops when either n characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 79 of file `streambuf.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::epptr()`, `std::min()`, `std::basic_streambuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

5.378.5 Member Data Documentation

```
5.378.5.1  template<typename _CharT, typename _Traits> locale
               std::basic_streambuf<_CharT, _Traits>::_M_buf_locale
               [protected]
```

Current locale setting.

5.379.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_string< _CharT, _Traits, _Alloc >`

Managing sequences of characters and character-like objects. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

Todo

Doc me! See `doc/doxygen/TODO` and <http://gcc.gnu.org/ml/libstdc++/2002-02/msg00003.html> for more.

Documentation? What's that? Nathan Myers <ncm@cantrip.org>.

A string looks like this:

	<code>[_Rep]</code>
	<code>_M_length</code>
<code>[basic_string<char_type>]</code>	<code>_M_capacity</code>
<code>_M_dataplus</code>	<code>_M_refcount</code>
<code>_M_p -----></code>	<code>unnamed array of char_type</code>

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 105 of file `basic_string.h`.

5.379.2 Constructor & Destructor Documentation

5.379.2.1 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ()
[inline]`

Default constructor creates an empty string.

Definition at line 430 of file `basic_string.h`.

5.379.2.2 `template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const
_Alloc & __a) [explicit]`

Construct an empty string using allocator *a*.

Definition at line 178 of file `basic_string.tcc`.

5.379.2.3 `template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const
basic_string< _CharT, _Traits, _Alloc > & __str)`

Construct string with copy of value of *str*.

Parameters

str Source string.

Definition at line 170 of file `basic_string.tcc`.

5.379.2.4 `template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const
basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos,
size_type __n = npos)`

Construct string as copy of a substring.

Parameters

str Source string.

pos Index of first character to copy from.

n Number of characters to copy (default remainder).

Definition at line 184 of file `basic_string.tcc`.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2051

5.379.2.5 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (const
basic_string<_CharT, _Traits, _Alloc> & __str, size_type __pos,
size_type __n, const _Alloc & __a)`

Construct string as copy of a substring.

Parameters

- str* Source string.
- pos* Index of first character to copy from.
- n* Number of characters to copy.
- a* Allocator to use.

Definition at line 194 of file basic_string.tcc.

5.379.2.6 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (const
_CharT * __s, size_type __n, const _Alloc & __a = _Alloc())`

Construct string initialized by a character array.

Parameters

- s* Source character array.
- n* Number of characters to copy.
- a* Allocator to use (default is default allocator).

NB: *s* must have at least *n* characters, `'\0'` has no special meaning.

Definition at line 206 of file basic_string.tcc.

5.379.2.7 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (const
_CharT * __s, const _Alloc & __a = _Alloc())`

Construct string as copy of a C string.

Parameters

- s* Source C string.
- a* Allocator to use (default is default allocator).

Definition at line 213 of file basic_string.tcc.

5.379.2.8 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
size_type __n, _CharT __c, const _Alloc & __a = _Alloc())`

Construct string as multiple characters.

Parameters

- n* Number of characters.
- c* Character to use.
- a* Allocator to use (default is default allocator).

Definition at line 220 of file basic_string.tcc.

5.379.2.9 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
basic_string< _CharT, _Traits, _Alloc > && __str) [inline]`

Move construct string.

Parameters

- str* Source string.

The newly-created string contains the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 500 of file basic_string.h.

5.379.2.10 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
initializer_list< _CharT > __l, const _Alloc & __a = _Alloc())`

Construct string from an initializer list.

Parameters

- l* `std::initializer_list` of characters.
- a* Allocator to use (default is default allocator).

Definition at line 235 of file basic_string.tcc.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2053

5.379.2.11 `template<typename _CharT , typename _Traits , typename
_Alloc> template<typename _InputIterator > std::basic_string<
_CharT, _Traits, _Alloc >::basic_string (_InputIterator __beg,
_InputIterator __end, const _Alloc & __a = _Alloc())`

Construct string as copy of a range.

Parameters

beg Start of range.

end End of range.

a Allocator to use (default is default allocator).

Definition at line 228 of file basic_string.tcc.

5.379.2.12 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string ()
[inline]`

Destroy the string instance.

Definition at line 531 of file basic_string.h.

5.379.3 Member Function Documentation

5.379.3.1 `template<typename _CharT , typename _Traits , typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::append (const basic_string< _CharT,
_Traits, _Alloc > & __str, size_type __pos, size_type __n)`

Append a substring.

Parameters

str The string to append.

pos Index of the first character of str to append.

n The number of characters to append.

Returns

Reference to this string.

Exceptions

[*std::out_of_range*](#) if *pos* is not a valid index.

This function appends n characters from *str* starting at *pos* to this string. If n is larger than the number of available characters in *str*, the remainder of *str* is appended.

Definition at line 342 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

5.379.3.2 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<
_CharT, _Traits, _Alloc>::append (const _CharT * __s, size_type
__n)`

Append a C substring.

Parameters

- s The C string to append.
- n The number of characters to append.

Returns

Reference to this string.

Definition at line 298 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

5.379.3.3 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::append
(const _CharT * __s) [inline]`

Append a C string.

Parameters

- s The C string to append.

Returns

Reference to this string.

Definition at line 995 of file `basic_string.h`.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference

5.379.3.4 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::append (size_type __n, _CharT __c)`

Append multiple characters.

Parameters

n The number of characters to append.

c The character to use.

Returns

Reference to this string.

Appends *n* copies of *c* to this string.

Definition at line 281 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::capacity()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

5.379.3.5 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append
(initializer_list< _CharT > __l) [inline]`

Append an [initializer_list](#) of characters.

Parameters

l The [initializer_list](#) of characters to append.

Returns

Reference to this string.

Definition at line 1019 of file `basic_string.h`.

Referenced by `std::basic_string< char >::append()`.

5.379.3.6 `template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator > basic_string& std::basic_string<
_CharT, _Traits, _Alloc >::append (_InputIterator __first,
_InputIterator __last) [inline]`

Append a range of characters.

Parameters

first Iterator referencing the first character to append.

last Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 1033 of file basic_string.h.

5.379.3.7 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::append (const basic_string< _CharT,
_Traits, _Alloc > & __str)`

Append a string to this string.

Parameters

str The string to append.

Returns

Reference to this string.

Definition at line 325 of file basic_string.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::capacity()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::collate< _CharT >::do_transform()`, `std::operator+()`, `std::operator>>()`, and `std::basic_string< _CharT, _Traits, _Alloc >::resize()`.

5.379.3.8 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
basic_string< _CharT, _Traits, _Alloc > && __str) [inline]`

Set value to contents of another string.

Parameters

str Source string to use.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2057

Returns

Reference to this string.

This function sets this string to the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 1068 of file basic_string.h.

```
5.379.3.9 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign (
const basic_string<_CharT, _Traits, _Alloc> & __str, size_type
__pos, size_type __n ) [inline]
```

Set value to a substring of a string.

Parameters

str The string to use.

pos Index of the first character of *str*.

n Number of characters to use.

Returns

Reference to this string.

Exceptions

[*std::out_of_range*](#) if *pos* is not a valid index.

This function sets this string to the substring of *str* consisting of *n* characters at *pos*. If *n* is larger than the number of available characters in *str*, the remainder of *str* is used.

Definition at line 1088 of file basic_string.h.

Referenced by std::basic_string<char>::assign().

```
5.379.3.10 template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<
_CharT, _Traits, _Alloc>::assign ( const _CharT * __s, size_type
__n )
```

Set value to a C substring.

Parameters

s The C string to use.

n Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first *n* characters of *s*. If *n* is larger than the number of available characters in *s*, the remainder of *s* is used.

Definition at line 259 of file basic_string.tcc.

References std::basic_string<_CharT, _Traits, _Alloc >::size().

5.379.3.11 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign
(const _CharT * __s) [inline]`

Set value to contents of a C string.

Parameters

s The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of *s*. The data is copied, so there is no dependence on *s* once the function returns.

Definition at line 1116 of file basic_string.h.

5.379.3.12 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign
(size_type __n, _CharT __c) [inline]`

Set value to multiple characters.

Parameters

n Length of the resulting string.

c The character to use.

Returns

Reference to this string.

This function sets the value of this string to *n* copies of character *c*.

Definition at line 1132 of file basic_string.h.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2059

5.379.3.13 `template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator > basic_string& std::basic_string<
_CharT, _Traits, _Alloc >::assign (_InputIterator __first,
_InputIterator __last) [inline]`

Set value to a range of characters.

Parameters

first Iterator referencing the first character to append.

last Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

Definition at line 1145 of file basic_string.h.

5.379.3.14 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign
(initializer_list< _CharT > __l) [inline]`

Set value to an [initializer_list](#) of characters.

Parameters

l The [initializer_list](#) of characters to assign.

Returns

Reference to this string.

Definition at line 1155 of file basic_string.h.

Referenced by std::basic_string< char >::assign().

5.379.3.15 `template<typename _CharT , typename _Traits , typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::assign (const basic_string< _CharT,
_Traits, _Alloc > & __str)`

Set value to contents of another string.

Parameters

str Source string to use.

Returns

Reference to this string.

Definition at line 243 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.379.3.16 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (
size_type __n) const [inline]`

Provides access to the data contained in the string.

Parameters

n The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

[*std::out_of_range*](#) If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws [*out_of_range*](#) if the check fails.

Definition at line 854 of file `basic_string.h`.

5.379.3.17 `template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string<_CharT, _Traits, _Alloc>::at (
size_type __n) [inline]`

Provides access to the data contained in the string.

Parameters

n The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

[*std::out_of_range*](#) If *n* is an invalid index.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws [out_of_range](#) if the check fails. Success results in unsharing the string.

Definition at line 907 of file `basic_string.h`.

5.379.3.18 `template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back ()
[inline]`

Returns a read/write reference to the data at the last element of the string.

Definition at line 883 of file `basic_string.h`.

5.379.3.19 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back
() const [inline]`

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 891 of file `basic_string.h`.

5.379.3.20 `template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin ()
[inline]`

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Definition at line 598 of file `basic_string.h`.

Referenced by `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

5.379.3.21 `template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline]`

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 609 of file `basic_string.h`.

5.379.3.22 `template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::c_str (
) const [inline]`

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1764 of file basic_string.h.

5.379.3.23 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity (
) const [inline]`

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 766 of file basic_string.h.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::append()`, and `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`.

5.379.3.24 `template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin (
) const [inline]`

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 673 of file basic_string.h.

5.379.3.25 `template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend (
) const [inline]`

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 681 of file basic_string.h.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2063

5.379.3.26 `template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::clear ()
[inline]`

Erases the string, making it empty.

Definition at line 793 of file basic_string.h.

Referenced by std::basic_stringbuf<_CharT, _Traits, _Alloc>::setbuf().

5.379.3.27 `template<typename _CharT, typename _Traits, typename _Alloc
> int std::basic_string<_CharT, _Traits, _Alloc>::compare (
size_type __pos, size_type __n1, const _CharT * __s, size_type
__n2) const`

Compare substring against a character array.

Parameters

pos1 Index of first character of substring.

n1 Number of characters in substring.

s character array to compare against.

n2 Number of characters of *s*.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form a string from the first *n2* characters of *s*. Returns an integer < 0 if this substring is ordered before the string from *s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *s*. Determines the effective length *r1* of the strings to compare as the smallest of the length of the substring and *n2*. The function then compares the two strings by calling traits::compare(substring.data(),s,r1). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: *s* must have at least *n2* characters, '\0' has no special meaning.

Definition at line 980 of file basic_string.tcc.

References std::min().

5.379.3.28 `template<typename _CharT, typename _Traits, typename _Alloc
> int std::basic_string<_CharT, _Traits, _Alloc>::compare (
size_type __pos, size_type __n, const basic_string<_CharT,
_Traits, _Alloc> & __str) const`

Compare substring to a string.

Parameters

pos Index of first character of substring.

n Number of characters in substring.

str String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *n* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and *str.size()*. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

size_type __pos1, size_type __n1, const basic_string<_CharT,
_Traits, _Alloc > & __str, size_type __pos2, size_type __n2) const`

Compare substring to a substring.

Parameters

pos1 Index of first character of substring.

n1 Number of characters in substring.

str String to compare against.

pos2 Index of first character of substring of *str*.

n2 Number of characters in substring of *str*.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form the substring of *str* from the *n2* characters starting at *pos2*. Returns an integer < 0 if this substring is ordered before the substring of *str*, 0 if their values are

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2065

equivalent, or > 0 if this substring is ordered after the substring of *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 931 of file `basic_string.tcc`.

               int std::basic_string< _CharT, _Traits, _Alloc >::compare (
               const basic_string< _CharT, _Traits, _Alloc > & __str ) const
               [inline]
```

Compare to a string.

Parameters

str String to compare against.

Returns

Integer < 0 , 0 , or > 0 .

Returns an integer < 0 if this string is ordered before *str*, 0 if their values are equivalent, or > 0 if this string is ordered after *str*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

               size_type __pos, size_type __n1, const _CharT * __s ) const
```

Compare substring to a C string.

Parameters

pos Index of first character of substring.

nl Number of characters in substring.

s C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *nl* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *s*. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

5.379.3.32 `template<typename _CharT, typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (const
_CharT * __s) const`

Compare to a C string.

Parameters

s C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *s*, 0 if their values are equivalent, or > 0 if this string is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and the length of a string constructed from *s*. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

_Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type
std::basic_string<_CharT, _Traits, _Alloc>::copy (_CharT * __s,
size_type __n, size_type __pos = 0) const`

Copy substring into C string.

Parameters

- s* C string to copy value into.
- n* Number of characters to copy.
- pos* Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

[*std::out_of_range*](#) If *pos* > *size()*.

Copies up to *n* characters starting at *pos* into the C string *s*. If *pos* is greater than *size()*, *out_of_range* is thrown.

Definition at line 723 of file `basic_string.tcc`.

5.379.3.34 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc
>::rbegin () const [inline]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 690 of file `basic_string.h`.

5.379.3.35 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc
>::rend () const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 699 of file `basic_string.h`.

5.379.3.36 `template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::data (
) const [inline]`

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1774 of file basic_string.h.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::basic_string< char >::compare()`, `std::collate< _CharT >::do_compare()`, `std::collate< _CharT >::do_transform()`, `std::basic_string< char >::find()`, `std::basic_string< char >::find_first_not_of()`, `std::basic_string< char >::find_first_of()`, `std::basic_string< char >::find_last_not_of()`, `std::basic_string< char >::find_last_of()`, `std::basic_string< char >::rfind()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, and `std::regex_traits< _Ch_type >::transform()`.

5.379.3.37 `template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty () const
[inline]`

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 801 of file basic_string.h.

Referenced by `std::operator>>()`.

5.379.3.38 `template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::end ()
[inline]`

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

Definition at line 617 of file basic_string.h.

Referenced by `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

5.379.3.39 `template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end (
) const [inline]`

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 628 of file basic_string.h.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2069

5.379.3.40 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::erase (
size_type __pos = 0, size_type __n = npos) [inline]`

Remove characters.

Parameters

- pos* Index of first character to remove (default 0).
n Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

[*std::out_of_range*](#) If *pos* is beyond the end of this string.

Removes *n* characters from this string starting at *pos*. The length of the string is reduced by *n*. If there are < *n* characters to remove, the remainder of the string is truncated. If *p* is beyond end of string, [*out_of_range*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1345 of file basic_string.h.

Referenced by `std::getline()`, `std::operator>>()`, and `std::basic_string< _CharT, _Traits, _Alloc >::resize()`.

5.379.3.41 `template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
iterator __position) [inline]`

Remove one character.

Parameters

- position* Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1361 of file basic_string.h.

5.379.3.42 `template<typename _CharT, typename _Traits, typename
_Alloc > basic_string< _CharT, _Traits, _Alloc >::iterator
std::basic_string< _CharT, _Traits, _Alloc >::erase (iterator
__first, iterator __last)`

Remove a range of characters.

Parameters

first Iterator referencing the first character to remove.

last Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 391 of file basic_string.tcc.

5.379.3.43 `template<typename _CharT, typename _Traits, typename
_Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type
std::basic_string< _CharT, _Traits, _Alloc >::find (const _CharT *
__s, size_type __pos, size_type __n) const`

Find position of a C substring.

Parameters

s C string to locate.

pos Index of character to search from.

n Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *pos*, searches forward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 737 of file basic_string.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

5.379.3.58 `template<typename _CharT, typename _Traits, typename
_Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (const basic_string< _CharT, _Traits, _Alloc >
& __str, size_type __pos = npos) const [inline]`

Find last position of a character not in string.

Parameters

str String containing characters to avoid.

pos Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *pos*, searches backward for a character not contained in *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2092 of file `basic_string.h`.

Referenced by `std::basic_string< char >::find_last_not_of()`.

5.379.3.59 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of
(_CharT __c, size_type __pos = npow) const [inline]`

Find last position of a character.

Parameters

c Character to locate.

pos Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Note: equivalent to `rfind(c, pos)`.

Definition at line 2019 of file `basic_string.h`.

5.379.3.60 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of
(const basic_string< _CharT, _Traits, _Alloc > & __str, size_type
__pos = npow) const [inline]`

Find last position of a character of string.

Parameters

str String containing characters to locate.

pos Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

_Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type
std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (const
_CharT * __s, size_type __pos, size_type __n) const`

Find last position of a character of C substring.

Parameters

- s* C string containing characters to locate.
- pos* Index of character to search back from.
- n* Number of characters from *s* to search for.

Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 831 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::size().

5.379.3.62 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of
(const _CharT * __s, size_type __pos = npos) const [inline]`

Find last position of a character of C string.

Parameters

- s* C string containing characters to locate.
- pos* Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

5.379.3.63 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::front
() const [inline]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 875 of file basic_string.h.

5.379.3.64 `template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::front ()
[inline]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 867 of file basic_string.h.

5.379.3.65 `template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic_string< _CharT, _Traits, _Alloc
>::get_allocator () const [inline]`

Return copy of allocator used to construct this string.

Definition at line 1781 of file basic_string.h.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_string< _CharT, _Traits, _Alloc >::swap()`.

5.379.3.66 `template<typename _CharT, typename _Traits , typename _Alloc
> basic_string< _CharT, _Traits, _Alloc > & std::basic_string<
_CharT, _Traits, _Alloc >::insert (size_type __pos, const _CharT
* __s, size_type __n)`

Insert a C substring.

Parameters

pos Iterator referencing location in string to insert at.

s The C string to insert.

n The number of characters to insert.

Returns

Reference to this string.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2081

Exceptions

std::length_error If new length exceeds `max_size()`.

std::out_of_range If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 360 of file `basic_string.tcc`.

```
5.379.3.67  template<typename _CharT, typename _Traits, typename _Alloc>
            iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p, _CharT __c ) [inline]
```

Insert one character.

Parameters

p Iterator referencing position in string to insert at.

c The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error If new length exceeds `max_size()`.

Inserts character *c* at position referenced by *p*. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If *p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1321 of file `basic_string.h`.

```
5.379.3.68  template<typename _CharT, typename _Traits, typename _Alloc>
            void std::basic_string< _CharT, _Traits, _Alloc >::insert ( iterator
            __p, size_type __n, _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

p Iterator referencing location in string to insert at.

n Number of characters to insert

c The character to insert.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Inserts *n* copies of character *c* starting at the position referenced by iterator *p*. If adding characters causes the length to exceed `max_size()`, [*length_error*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1172 of file `basic_string.h`.

```
5.379.3.69  template<typename _CharT, typename _Traits, typename _Alloc>
            basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
                size_type __pos1, const basic_string< _CharT, _Traits, _Alloc > &
                __str ) [inline]
```

Insert value of a string.

Parameters

pos1 Iterator referencing location in string to insert at.

str The string to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Inserts value of *str* starting at *pos1*. If adding characters causes the length to exceed `max_size()`, [*length_error*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1218 of file `basic_string.h`.

Referenced by `std::basic_string< char >::insert()`.

```
5.379.3.70  template<typename _CharT, typename _Traits, typename _Alloc>
            void std::basic_string< _CharT, _Traits, _Alloc >::insert ( iterator
                __p, initializer_list< _CharT > __l ) [inline]
```

Insert an [*initializer_list*](#) of characters.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2083

Parameters

- p* Iterator referencing location in string to insert at.
- l* The [initializer_list](#) of characters to insert.

Exceptions

[std::length_error](#) If new length exceeds `max_size()`.

Definition at line 1199 of file `basic_string.h`.

```
5.379.3.71  template<typename _CharT, typename _Traits, typename _Alloc>
            template<class _InputIterator > void std::basic_string< _CharT,
            _Traits, _Alloc >::insert ( iterator __p, _InputIterator __beg,
            _InputIterator __end ) [inline]
```

Insert a range of characters.

Parameters

- p* Iterator referencing location in string to insert at.
- beg* Start of range.
- end* End of range.

Exceptions

[std::length_error](#) If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed `max_size()`, [length_error](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1188 of file `basic_string.h`.

```
5.379.3.72  template<typename _CharT, typename _Traits, typename _Alloc>
            basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos, size_type __n, _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

- pos* Index in string to insert at.
- n* Number of characters to insert
- c* The character to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

[*std::out_of_range*](#) If *pos* is beyond the end of this string.

Inserts *n* copies of character *c* starting at index *pos*. If adding characters causes the length to exceed `max_size()`, [*length_error*](#) is thrown. If *pos* > `length()`, [*out_of_range*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1304 of file `basic_string.h`.

5.379.3.73 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
size_type __pos1, const basic_string< _CharT, _Traits, _Alloc > &
__str, size_type __pos2, size_type __n) [inline]`

Insert a substring.

Parameters

pos1 Iterator referencing location in string to insert at.

str The string to insert.

pos2 Start of characters in *str* to insert.

n Number of characters to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

[*std::out_of_range*](#) If *pos1* > `size()` or *pos2* > *str.size()*.

Starting at *pos1*, insert *n* character of *str* beginning with *pos2*. If adding characters causes the length to exceed `max_size()`, [*length_error*](#) is thrown. If *pos1* is beyond the end of this string or *pos2* is beyond the end of *str*, [*out_of_range*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1240 of file `basic_string.h`.

Referenced by `std::basic_string< char >::insert()`.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2085

5.379.3.74 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
size_type __pos, const _CharT * __s) [inline]`

Insert a C string.

Parameters

pos Iterator referencing location in string to insert at.

s The C string to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

[*std::out_of_range*](#) If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, [*length_error*](#) is thrown. If *pos* is beyond `end()`, [*out_of_range*](#) is thrown. The value of the string doesn't change if an error is thrown.

5.379.3.75 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::length ()
const [inline]`

Returns the number of characters in the string, not including any /// null-termination.

Definition at line 714 of file `basic_string.h`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::collate< _CharT >::do_compare()`, `std::collate< _CharT >::do_transform()`, and `std::regex_traits< _Ch_type >::length()`.

5.379.3.76 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size () const [inline]`

Returns the [*size\(\)*](#) of the largest possible string.

Definition at line 719 of file `basic_string.h`.

Referenced by `std::getline()`, and `std::operator>>()`.

5.379.3.77 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator+=(const basic_string< _CharT, _Traits, _Alloc > &
__str) [inline]`

Append a string to this string.

Parameters

str The string to append.

Returns

Reference to this string.

Definition at line 922 of file basic_string.h.

5.379.3.78 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator+=(const _CharT * __s) [inline]`

Append a C string.

Parameters

s The C string to append.

Returns

Reference to this string.

Definition at line 931 of file basic_string.h.

5.379.3.79 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator+=(_CharT __c) [inline]`

Append a character.

Parameters

c The character to append.

Returns

Reference to this string.

Definition at line 940 of file basic_string.h.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2087

5.379.3.80 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc
>::operator+=(initializer_list<_CharT> __l) [inline]`

Append an [initializer_list](#) of characters.

Parameters

l The [initializer_list](#) of characters to be appended.

Returns

Reference to this string.

Definition at line 953 of file `basic_string.h`.

5.379.3.81 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc
>::operator=(basic_string<_CharT, _Traits, _Alloc> && __str
) [inline]`

Move assign the value of *str* to this string.

Parameters

str Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 573 of file `basic_string.h`.

5.379.3.82 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc
>::operator=(const basic_string<_CharT, _Traits, _Alloc> &
__str) [inline]`

Assign the value of *str* to this string.

Parameters

str Source string.

Definition at line 539 of file `basic_string.h`.

5.379.3.83 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator= (const _CharT * __s) [inline]`

Copy contents of *s* into this string.

Parameters

s Source null-terminated string.

Definition at line 547 of file basic_string.h.

5.379.3.84 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator= (initializer_list< _CharT > __l) [inline]`

Set value to string constructed from initializer list.

Parameters

l [std::initializer_list](#).

Definition at line 585 of file basic_string.h.

5.379.3.85 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::operator= (_CharT __c) [inline]`

Set value to string of length 1.

Parameters

c Source character.

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

Definition at line 558 of file basic_string.h.

5.379.3.86 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc
>::operator[] (size_type __pos) const [inline]`

Subscript access to the data contained in the string.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2089

Parameters

pos The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out_of_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 816 of file basic_string.h.

```
5.379.3.87 template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string<_CharT, _Traits, _Alloc>::operator[] (
size_type __pos ) [inline]
```

Subscript access to the data contained in the string.

Parameters

pos The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out_of_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).) Unshares the string.

Definition at line 833 of file basic_string.h.

```
5.379.3.88 template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::push_back (
_CharT __c ) [inline]
```

Append a single character.

Parameters

c Character to append.

Definition at line 1041 of file basic_string.h.

Referenced by `std::collate<_CharT>::do_transform()`, and `std::operator>>()`.

5.379.3.89 `template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc
>::rbegin () [inline]`

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 637 of file `basic_string.h`.

5.379.3.90 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc
>::rbegin () const [inline]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 646 of file `basic_string.h`.

5.379.3.91 `template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc
>::rend () const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 664 of file `basic_string.h`.

5.379.3.92 `template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend
() [inline]`

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 655 of file `basic_string.h`.

5.379.3.93 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace
(size_type __pos, size_type __n, const basic_string< _CharT,
_Traits, _Alloc > & __str) [inline]`

Replace characters with value from another string.

Parameters

pos Index of first character to replace.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2091

n Number of characters to be replaced.

str String to insert.

Returns

Reference to this string.

Exceptions

[*std::out_of_range*](#) If *pos* is beyond the end of this string.

[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*pos*,*pos*+*n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, [`out_of_range`](#) is thrown. If the length of the result exceeds `max_size()`, [`length_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1400 of file `basic_string.h`.

Referenced by `std::basic_string< char >::replace()`.

5.379.3.94 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace
(iterator __i1, iterator __i2, const basic_string< _CharT, _Traits,
_Alloc > & __str) [inline]`

Replace range of characters with string.

Parameters

i1 Iterator referencing start of range to replace.

i2 Iterator referencing end of range to replace.

str String value to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*i1*,*i2*). In place, the value of *str* is inserted. If the length of result exceeds `max_size()`, [`length_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1506 of file `basic_string.h`.

Referenced by `std::basic_string< char >::replace()`.

5.379.3.95 `template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
 (iterator __i1, iterator __i2, const _CharT * __s, size_type __n
) [inline]`

Replace range of characters with C substring.

Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.
- n* Number of characters from *s* to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*i1*,*i2*). In place, the first *n* characters of *s* are inserted. If the length of result exceeds `max_size()`, [*length_error*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1524 of file `basic_string.h`.

5.379.3.96 `template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
 (iterator __i1, iterator __i2, const _CharT * __s) [inline]`

Replace range of characters with C string.

Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2093

Removes the characters in the range [i1,i2). In place, the characters of *s* are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1545 of file `basic_string.h`.

```
5.379.3.97 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
( size_type __pos1, size_type __n1, const basic_string<_CharT,
_Traits, _Alloc> & __str, size_type __pos2, size_type __n2 )
[inline]
```

Replace characters with value from another string.

Parameters

pos1 Index of first character to replace.
n1 Number of characters to be replaced.
str String to insert.
pos2 Index of first character of *str* to use.
n2 Number of characters from *str* to use.

Returns

Reference to this string.

Exceptions

`std::out_of_range` If *pos1* > `size()` or *pos2* > `str.size()`.
`std::length_error` If new length exceeds `max_size()`.

Removes the characters in the range [*pos1*,*pos1* + *n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

```
5.379.3.98 template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
( size_type __pos, size_type __n1, size_type __n2, _CharT __c )
[inline]
```

Replace characters with multiple characters.

Parameters

pos Index of first character to replace.
n1 Number of characters to be replaced.
n2 Number of characters to insert.
c Character to insert.

Returns

Reference to this string.

Exceptions

[*std::out_of_range*](#) If *pos* > `size()`.
[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*pos*,*pos* + *n1*) from this string. In place, *n2* copies of *c* are inserted. If *pos* is beyond end of string, [`out_of_range`](#) is thrown. If the length of result exceeds `max_size()`, [`length_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1488 of file `basic_string.h`.

5.379.3.99 `template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
 (iterator __i1, iterator __i2, size_type __n, _CharT __c)
 [inline]`

Replace range of characters with multiple characters.

Parameters

i1 Iterator referencing start of range to replace.
i2 Iterator referencing end of range to replace.
n Number of characters to insert.
c Character to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*i1*,*i2*). In place, *n* copies of *c* are inserted. If the length of result exceeds `max_size()`, [`length_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1566 of file `basic_string.h`.

5.379 std::basic_string<_CharT, _Traits, _Alloc> Class Template Reference 2095

5.379.3.100 `template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator > basic_string& std::basic_string<
_CharT, _Traits, _Alloc>::replace (iterator __i1, iterator __i2,
_InputIterator __k1, _InputIterator __k2) [inline]`

Replace range of characters with range.

Parameters

i1 Iterator referencing start of range to replace.

i2 Iterator referencing end of range to replace.

k1 Iterator referencing start of range to insert.

k2 Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

[*std::length_error*](#) If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds `max_size()`, [*length_error*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1589 of file `basic_string.h`.

5.379.3.101 `template<typename _CharT, typename _Traits, typename _Alloc
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<
_CharT, _Traits, _Alloc>::replace (size_type __pos, size_type
__n1, const _CharT * __s, size_type __n2)`

Replace characters with value of a C substring.

Parameters

pos Index of first character to replace.

n1 Number of characters to be replaced.

s C string to insert.

n2 Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range If *pos1* > *size()*.

std::length_error If new length exceeds *max_size()*.

Removes the characters in the range [*pos*,*pos* + *n1*) from this string. In place, the first *n2* characters of *s* are inserted, or all of *s* if *n2* is too large. If *pos* is beyond end of string, *out_of_range* is thrown. If the length of result exceeds *max_size()*, *length_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 414 of file *basic_string.tcc*.

5.379.3.102 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::replace (size_type __pos, size_type __n1, const _CharT * __s
) [inline]`

Replace characters with value of a C string.

Parameters

pos Index of first character to replace.

n1 Number of characters to be replaced.

s C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range If *pos* > *size()*.

std::length_error If new length exceeds *max_size()*.

Removes the characters in the range [*pos*,*pos* + *n1*) from this string. In place, the characters of *s* are inserted. If *pos* is beyond end of string, *out_of_range* is thrown. If the length of result exceeds *max_size()*, *length_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1465 of file *basic_string.h*.

5.379.3.103 `template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc
>::replace (iterator __i1, iterator __i2, initializer_list< _CharT
> __l) [inline]`

Replace range of characters with *initializer_list*.

5.379 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference 2097

Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- l* The [initializer_list](#) of characters to insert.

Returns

Reference to this string.

Exceptions

[std::length_error](#) If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, [length_error](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1657 of file `basic_string.h`.

Referenced by `std::basic_string< char >::replace()`.

5.379.3.104 `template<typename _CharT, typename _Traits, typename _Alloc
> void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
size_type __res_arg = 0)`

Attempt to preallocate enough memory for specified number of characters.

Parameters

res_arg Number of characters required.

Exceptions

[std::length_error](#) If *res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, [length_error](#) is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 502 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::capacity()`, `std::basic_string< _CharT, _Traits, _Alloc >::get_allocator()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::num_get<_CharT, _InIter>::do_get()`, and `std::operator>>()`.

5.379.3.105 `template<typename _CharT, typename _Traits, typename _Alloc>
> void std::basic_string<_CharT, _Traits, _Alloc>::resize (
size_type __n, _CharT __c)`

Resizes the string to the specified number of characters.

Parameters

- n* Number of characters the string should contain.
- c* Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *c*.

Definition at line 640 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`.

5.379.3.106 `template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::resize (
size_type __n) [inline]`

Resizes the string to the specified number of characters.

Parameters

- n* Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 746 of file `basic_string.h`.

Referenced by `std::basic_string<char>::resize()`.

5.379.3.107 `template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
const basic_string< _CharT, _Traits, _Alloc > & __str, size_type
__pos = npos) const [inline]`

Find last position of a string.

Parameters

str String to locate.

pos Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for value of *str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1853 of file basic_string.h.

Referenced by std::basic_string< char >::rfind().

5.379.3.108 `template<typename _CharT, typename _Traits , typename
_Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type
std::basic_string< _CharT, _Traits, _Alloc >::rfind (_CharT __c,
size_type __pos = npos) const`

Find last position of a character.

Parameters

c Character to locate.

pos Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 799 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::size().

size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
const _CharT * __s, size_type __pos = npos) const [inline]`

Find last position of a C string.

Parameters

s C string to locate.

pos Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1881 of file `basic_string.h`.

5.379.3.110 `template<typename _CharT, typename _Traits , typename
_Alloc > basic_string<_CharT, _Traits, _Alloc>::size_type
std::basic_string<_CharT, _Traits, _Alloc>::rfind (const
_CharT * __s, size_type __pos, size_type __n) const`

Find last position of a C substring.

Parameters

s C string to locate.

pos Index of character to search back from.

n Number of characters from *s* to search for.

Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 778 of file `basic_string.tcc`.

basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr ()
size_type __pos = 0, size_type __n = npos) const [inline]`

Get a substring.

Parameters

pos Index of first character (default 0).

n Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

[*std::out_of_range*](#) If `pos > size()`.

Construct and return a new string using the *n* characters starting at *pos*. If the string is too short, use the remainder of the characters. If *pos* is beyond the end of the string, [*out_of_range*](#) is thrown.

Definition at line 2153 of file `basic_string.h`.

5.379.3.114 `template<typename _CharT, typename _Traits, typename _Alloc
> void std::basic_string< _CharT, _Traits, _Alloc >::swap (
basic_string< _CharT, _Traits, _Alloc > & __s)`

Swap contents with another string.

Parameters

s String to swap with.

Exchanges the contents of this string with that of *s* in constant time.

Definition at line 519 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::get_allocator()`.

Referenced by `std::swap()`.

5.380.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_stringbuf< _CharT, _Traits, _Alloc >`

The actual work of input and output (for `std::string`).

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.). For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

Definition at line 58 of file `sstream`.

5.380.2 Member Typedef Documentation

5.380.2.1 `template<typename _CharT, typename _Traits, typename _Alloc> typedef basic_streambuf<char_type, traits_type> std::basic_stringbuf< _CharT, _Traits, _Alloc >::__streambuf_type`

This is a non-standard type.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 71 of file `sstream`.

5.380.2.2 `template<typename _CharT, typename _Traits, typename _Alloc> typedef _CharT std::basic_stringbuf< _CharT, _Traits, _Alloc >::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 62 of file `sstream`.

5.380 std::basic_stringbuf< _CharT, _Traits, _Alloc > Class Template Reference

5.380.2.3 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef traits_type::int_type std::basic_stringbuf< _CharT, _Traits,
_Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 67 of file sstream.

5.380.2.4 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef traits_type::off_type std::basic_stringbuf< _CharT, _Traits,
_Alloc >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 69 of file sstream.

5.380.2.5 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef traits_type::pos_type std::basic_stringbuf< _CharT, _Traits,
_Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 68 of file sstream.

5.380.2.6 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef _Traits std::basic_stringbuf< _CharT, _Traits, _Alloc
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

Definition at line 63 of file sstream.

5.380.3 Constructor & Destructor Documentation

5.380.3.1 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf
(ios_base::openmode __mode = ios_base::in | ios_base::out)
[inline, explicit]`

Starts with an empty string buffer.

Parameters

mode Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.

Definition at line 92 of file sstream.

5.380.3.2 `template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf
(const __string_type & __str, ios_base::openmode __mode =
ios_base::in | ios_base::out) [inline, explicit]`

Starts with an existing string buffer.

Parameters

str A string to copy as a starting buffer.

mode Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

Definition at line 105 of file sstream.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 466 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.380.4.3 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::epptr () const
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 513 of file streambuf.

Referenced by std::basic_streambuf< _CharT, _Traits >::xsputn().

5.380.4.4 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::gbump (int __n)
[inline, protected, inherited]`

Moving the read position.

Parameters

n The delta by which to move.

This just advances the read position without returning any data.

Definition at line 476 of file streambuf.

5.380.4.5 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf< _CharT, _Traits >::getloc () const
[inline, inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 222 of file streambuf.

5.380.4.6 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::gptr () const
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 463 of file streambuf.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

5.380 `std::basic_stringbuf<_CharT, _Traits, _Alloc>` Class Template Reference

5.380.4.7 `template<typename _CharT, typename _Traits> virtual void
std::basic_streambuf<_CharT, _Traits>::imbue (const locale &)
[inline, protected, virtual, inherited]`

Changes translations.

Parameters

loc A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 554 of file streambuf.

5.380.4.8 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf<_CharT, _Traits>::in_avail () [inline,
inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 262 of file streambuf.

5.380.4.9 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf<_CharT, _Traits>::overflow (int_type =
traits_type::eof()) [inline, protected, virtual,
inherited]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

c An additional character to consume.

Returns

eof() to indicate failure, something else (usually *c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not eof().

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in [__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>](#).

Definition at line 746 of file streambuf.

Referenced by [std::basic_streambuf<_CharT, _Traits>::xsputn\(\)](#).

5.380.4.10 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf<_CharT, _Traits>::pbackfail (int_type =
traits_type::eof()) [inline, protected, virtual,
inherited]`

Tries to back up the input sequence.

Parameters

c The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of [gptr\(\)](#), [eback\(\)](#), and [pptr\(\)](#) are the same as for [underflow\(\)](#).

Note

Base class version does nothing, returns eof().

5.380 std::basic_stringbuf< _CharT, _Traits, _Alloc > Class Template Referenced

Reimplemented in [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#).

protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

5.380 std::basic_stringbuf< _CharT, _Traits, _Alloc > Class Template Reference

Definition at line 592 of file streambuf.

5.380.4.22 `template<typename _CharT, typename _Traits, typename _Alloc>
virtual __streambuf_type* std::basic_stringbuf< _CharT, _Traits,
_Alloc >::setbuf(char_type * __s, streamsize __n) [inline,
protected, virtual]`

Manipulates the buffer.

Parameters

s Pointer to a buffer area.

n Size of *s*.

Returns

this

If no buffer has already been created, and both *s* and *n* are non-zero, then *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Definition at line 196 of file sstream.

References `std::basic_string< _CharT, _Traits, _Alloc >::clear()`.

5.380.4.23 `template<typename _CharT, typename _Traits> virtual
basic_streambuf<char_type,_Traits>* std::basic_streambuf<
_CharT,_Traits >::setbuf(char_type *, streamsize) [inline,
protected, virtual, inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

Note

Base class version does nothing, returns *this*.

Definition at line 569 of file streambuf.

5.380.4.24 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::setg (char_type *
__gbeg, char_type * __gnext, char_type * __gend) [inline,
protected, inherited]`

Setting the three read area pointers.

Parameters

gbeg A pointer.
gnext A pointer.
gend A pointer.

Postcondition

gbeg == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 487 of file streambuf.

5.380.4.25 `template<typename _CharT, typename _Traits> void
std::basic_streambuf< _CharT, _Traits >::setp (char_type
* __pbeg, char_type * __pend) [inline, protected,
inherited]`

Setting the three write area pointers.

Parameters

pbeg A pointer.
pend A pointer.

Postcondition

pbeg == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 533 of file streambuf.

5.380.4.26 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sgetc () [inline,
inherited]`

Getting the next character.

Returns

The next character, or eof.

5.380 std::basic_stringbuf<_CharT, _Traits, _Alloc> Class Template Reference

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 316 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.380.4.27 `template<typename _CharT, typename _Traits> streamsize
std::basic_stringbuf<_CharT, _Traits>::sgetn(char_type * __s,
streamsize __n) [inline, inherited]`

Entry point for `xsgetn`.

Parameters

s A buffer area.

n A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 335 of file streambuf.

5.380.4.28 `template<typename _CharT, typename _Traits, typename _Alloc>
virtual streamsize std::basic_stringbuf<_CharT, _Traits, _Alloc>
::showmanyc() [inline, protected, virtual]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.
[27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

Definition at line 164 of file sstream.

5.380.4.29 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf<_CharT, _Traits>::snextc() [inline,
inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls [sbumpc\(\)](#), and if that function returns `traits::eof()`, so does this function. Otherwise, [sgetc\(\)](#).

Definition at line 276 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.380.4.30 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf<_CharT, _Traits>::sputbackc(char_type
__c) [inline, inherited]`

Pushing characters back into the input stream.

Parameters

c The character to push back.

Returns

The previous character, if possible.

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 350 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

5.380.4.31 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf<_CharT, _Traits>::sputc(char_type __c)
[inline, inherited]`

Entry point for all single-character output functions.

5.380 std::basic_stringbuf<_CharT, _Traits, _Alloc> Class Template Reference

Parameters

c A character to output.

Returns

c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 402 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

5.380.4.32 `template<typename _CharT, typename _Traits> streamsize
std::basic_streambuf<_CharT, _Traits>::sputn (const char_type
* __s, streamsize __n) [inline, inherited]`

Entry point for all single-character output functions.

Parameters

s A buffer read area.

n A count.

One of two public output functions.

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 428 of file `streambuf`.

5.380.4.33 `template<typename _CharT, typename _Traits> void
std::basic_streambuf<_CharT, _Traits>::stossc () [inline,
inherited]`

Tosses a character.

Advances the read pointer, ignoring the character that would have been read.

See <http://gcc.gnu.org/ml/libstdc++/2002-05/msg00168.html>

Definition at line 761 of file `streambuf`.

5.380.4.34 `template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (const
__string_type & __s) [inline]`

Setting a new buffer.

Parameters

s The string to use as a new sequence.

Deallocates any previous stored sequence, then copies *s* to use as a new one.

Definition at line 144 of file sstream.

References `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

5.380.4.35 `template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
) const [inline]`

Copying out the string buffer.

Returns

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

Definition at line 120 of file sstream.

5.380.4.36 `template<typename _CharT, typename _Traits> int_type
std::basic_streambuf< _CharT, _Traits >::sungetc () [inline,
inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `ebackfail()`. The effect is to *unget* the last character *gotten*.

5.380 std::basic_stringbuf< _CharT, _Traits, _Alloc > Class Template Reference

Definition at line 375 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

5.380.4.37 `template<typename _CharT, typename _Traits> virtual int
std::basic_streambuf< _CharT, _Traits >::sync (void)
[inline, protected, virtual, inherited]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in [std::basic_filebuf< _CharT, _Traits >](#), [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#), [std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >](#), and [std::basic_filebuf< char_type, traits_type >](#).

Definition at line 605 of file streambuf.

5.380.4.38 `template<typename _CharT, typename _Traits> virtual int_type
std::basic_streambuf< _CharT, _Traits >::uflow () [inline,
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as [underflow\(\)](#), and in fact is required to call that function. It also returns the new character, like [underflow\(\)](#) does. However, this function also moves the read position forward by one.

Reimplemented in [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#).

Definition at line 678 of file streambuf.

5.380.4.39 `template<class _CharT, class _Traits, class _Alloc >
 basic_stringbuf< _CharT, _Traits, _Alloc >::int_type
 std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow ()
 [protected, virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 131 of file `sstream.tcc`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::M_mode`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::in`.

5.380.4.40 `template<typename _CharT, typename _Traits > streamsize
 std::basic_streambuf< _CharT, _Traits >::xsgetn (char_type *
 __s, streamsize __n) [protected, virtual, inherited]`

Multiple character extraction.

Parameters

s A buffer area.

n Maximum number of characters to assign.

Returns

The number of characters assigned.

5.380 `std::basic_stringbuf<_CharT, _Traits, _Alloc>` Class Template Reference

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 45 of file `streambuf.tcc`.

References `std::min()`.

```
5.380.4.41  template<typename _CharT , typename _Traits > streamsize
              std::basic_streambuf< _CharT, _Traits >::xsputn ( const
              char_type * __s, streamsize __n ) [protected, virtual,
              inherited]
```

Multiple character insertion.

Parameters

`s` A buffer area.

`n` Maximum number of characters to write.

Returns

The number of characters written.

Writes `s[0]` through `s[n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 79 of file `streambuf.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::epptr()`, `std::min()`, `std::basic_streambuf<_CharT, _Traits>::overflow()`, `std::basic_streambuf<_CharT, _Traits>::pbump()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

5.380.5 Member Data Documentation

5.380.5.1 `template<typename _CharT, typename _Traits> locale
std::basic_streambuf< _CharT, _Traits >::_M_buf_locale
[protected, inherited]`

Current locale setting.

Definition at line 188 of file streambuf.

ios_base::openmode std::basic_stringbuf<_CharT, _Traits, _Alloc
>::_M_mode [protected]`

Place to stash in || out || in | out settings for current stringbuf.

Definition at line 77 of file `sstream`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

5.380.5.6 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf<_CharT, _Traits>::_M_out_beg
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

5.380.5.7 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf<_CharT, _Traits>::_M_out_cur
[protected, inherited]`

Entry point for [imbue\(\)](#).

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 184 of file `streambuf`.

5.380.5.8 `template<typename _CharT, typename _Traits> char_type*
std::basic_streambuf< _CharT, _Traits >::_M_out_end
[protected, inherited]`

Entry point for `imbue()`.

Parameters

loc The new locale.

Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 185 of file `streambuf`.

The documentation for this class was generated from the following files:

- [__istream_type](#) & [operator](#)>> ([ios_base](#) &(*__pf)([ios_base](#) &))

Arithmetic Extractors

All the [operator](#)>> functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type [std::basic_istream::sentry](#) with the second argument ([noskipws](#)) set to false. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, [ios_base::badbit](#) will be turned on in the stream's error state without causing an [ios_base::failure](#) to be thrown. The original exception will then be rethrown.

- [__istream_type](#) & [operator](#)>> (bool &__n)
- [__istream_type](#) & [operator](#)>> (short &__n)
- [__istream_type](#) & [operator](#)>> (unsigned short &__n)

- [__istream_type](#) & [operator](#)>> (void *&__p)
- [__istream_type](#) & [operator](#)>> ([__streambuf_type](#) *__sb)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type [std::basic_istream::sentry](#) with the second argument ([noskipws](#)) set to true. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the [sentry](#) status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by [gcount\(\)](#).

If an exception is thrown during extraction, [ios_base::badbit](#) will be turned on in the stream's error state without causing an [ios_base::failure](#) to be thrown. The original exception will then be rethrown.

- [__ostream_type](#) & `operator<< (__ios_type &(__pf)(__ios_type &))`
- [__ostream_type](#) & `operator<< (ios_base &(__pf)(ios_base &))`

Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type [std::basic_ostream::sentry](#). This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, [ios_base::badbit](#) will be turned on in the stream's error state without causing an [ios_base::failure](#) to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

5.381.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc> class
std::basic_stringstream< _CharT, _Traits, _Alloc >
```

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 476 of file `sstream`.

5.381.2 Member Typedef Documentation

5.381.2.1 `template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_istream<_CharT, _Traits
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file `istream`.

5.381.2.2 `template<typename _CharT, typename _Traits> typedef
ctype<_CharT> std::basic_ostream<_CharT, _Traits
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 71 of file `ostream`.

5.381.2.3 `template<typename _CharT, typename _Traits> typedef
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>
> std::basic_istream<_CharT, _Traits>::__num_get_type
[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file `istream`.

5.381.2.4 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ostream<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented in [std::basic_ostream<_CharT, _Traits>](#), [std::basic_ostream<char, _Traits>](#), and [std::basic_ostream<char>](#).

Definition at line 84 of file `basic_ios.h`.

5.381.2.5 `template<typename _CharT, typename _Traits> typedef
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>
> std::basic_ostream<_CharT, _Traits>::__num_put_type
[inherited]`

These are non-standard types.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Definition at line 70 of file ostream.

5.381.2.6 `template<typename _CharT, typename _Traits> typedef _CharT
std::basic_istream<_CharT, _Traits>::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istreamstream<_CharT, _Traits, _Alloc>](#).

Definition at line 59 of file istream.

5.381.2.7 `template<typename _CharT, typename _Traits, typename _Alloc>
typedef _CharT std::basic_stringstream<_CharT, _Traits, _Alloc>
>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream<_CharT, _Traits>](#).

Definition at line 480 of file sstream.

5.381.2.8 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)
[inherited]`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the [ios_base](#) object.

int The integer provided when the callback was registered.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2139

Event callbacks are user defined functions that get called during several [ios_base](#) and [basic_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 435 of file `ios_base.h`.

5.381.2.9 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file `ios_base.h`.

5.381.2.10 `template<typename _CharT, typename _Traits> typedef
_Traits::int_type std::basic_istream< _CharT, _Traits >::int_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istreamstream< _CharT, _Traits, _Alloc >](#).

Definition at line 60 of file istream.

5.381.2.11 `template<typename _CharT , typename _Traits , typename _Alloc
> typedef traits_type::int_type std::basic_stringstream< _CharT,
_Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream< _CharT, _Traits >](#).

Definition at line 485 of file sstream.

5.381.2.12 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2141

5.381.2.13 `template<typename _CharT, typename _Traits, typename _Alloc> typedef traits_type::off_type std::basic_stringstream<_CharT, _Traits, _Alloc>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream<_CharT, _Traits>](#).

Definition at line 487 of file `sstream`.

5.381.2.14 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_istream<_CharT, _Traits>::off_type` **[inherited]**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istream<_CharT, _Traits, _Alloc>](#).

Definition at line 62 of file `istream`.

5.381.2.15 `typedef _Ios_Openmode std::ios_base::openmode` **[inherited]**

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.381.2.16 `template<typename _CharT, typename _Traits, typename _Alloc
> typedef traits_type::pos_type std::basic_stringstream< _CharT,
_Traits, _Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_istream< _CharT, _Traits >](#).

Definition at line 486 of file sstream.

5.381.2.17 `template<typename _CharT, typename _Traits> typedef
_Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Reimplemented in [std::basic_ifstream< _CharT, _Traits >](#), and [std::basic_istream< _CharT, _Traits, _Alloc >](#).

Definition at line 61 of file istream.

5.381.2.18 `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

_Ios_Seekdir is implementation-defined. Defined values of type *seekdir* are:

- *beg*
- *cur*, equivalent to *SEEK_CUR* in the C standard library.
- *end*, equivalent to *SEEK_END* in the C standard library.

Definition at line 392 of file ios_base.h.

5.381.2.19 `template<typename _CharT, typename _Traits> typedef
_Traits std::basic_istream< _CharT, _Traits >::traits_type
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2143

Reimplemented from [std::basic_ios<_CharT, _Traits>](#).

Reimplemented in [std::basic_ifstream<_CharT, _Traits>](#), and [std::basic_istream<_CharT, _Traits, _Alloc>](#).

Definition at line 63 of file `istream`.

5.381.2.20 `template<typename _CharT, typename _Traits, typename _Alloc
> typedef _Traits std::basic_stringstream<_CharT, _Traits, _Alloc
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic_iostream<_CharT, _Traits>](#).

Definition at line 481 of file `sstream`.

5.381.3 Member Enumeration Documentation

5.381.3.1 `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during [imbue\(\)](#). `copyfmt_event` is used during `copyfmt()`.

Definition at line 418 of file `ios_base.h`.

5.381.4 Constructor & Destructor Documentation

5.381.4.1 `template<typename _CharT, typename _Traits, typename
_Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc
>::basic_stringstream (ios_base::openmode __m =
ios_base::out | ios_base::in) [inline, explicit]`

Default constructor starts with an empty string buffer.

Parameters

mode Whether the buffer can read, or write, or both.

Initializes `sb` using `mode`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 510 of file sstream.

```
5.381.4.2  template<typename _CharT , typename _Traits , typename
             _Alloc > std::basic_stringstream< _CharT, _Traits, _Alloc
             >::basic_stringstream ( const __string_type & __str,
             ios_base::openmode __m = ios_base::out | ios_base::in )
             [inline, explicit]
```

Starts with an existing string buffer.

Parameters

str A string to copy as a starting buffer.

mode Whether the buffer can read, or write, or both.

Initializes *sb* using *str* and *mode*, and passes *&sb* to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 526 of file sstream.

```
5.381.4.3  template<typename _CharT , typename _Traits , typename
             _Alloc > std::basic_stringstream< _CharT, _Traits, _Alloc
             >::~~basic_stringstream ( ) [inline]
```

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 537 of file sstream.

5.381.5 Member Function Documentation

```
5.381.5.1  const locale& std::ios_base::_M_getloc ( ) const [inline,
             inherited]
```

Locale access.

Returns

A reference to the current locale.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2145

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 705 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

5.381.5.2 `template<typename _CharT, typename _Traits> void
std::basic_ostream<_CharT, _Traits>::_M_write (const char_type
* __s, streamsize __n) [inline, inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

`*this`

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 287 of file `ostream`.

5.381.5.3 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits>::bad () const [inline, inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

5.381.5.4 `template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::clear (iostate __state = goodbit)
[inherited]`

[Re]sets the error state.

Parameters

state The new state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 40 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.381.5.5 `template<typename _CharT, typename _Traits> basic_ios<
_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
const basic_ios<_CharT, _Traits> & __rhs) [inherited]`

Copies fields of `__rhs` into this.

Parameters

__rhs The source values for the copies.

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 62 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

5.381.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios<
_CharT, _Traits>::eof () const [inline, inherited]`

Fast error checking.

5.381 `std::basic_stringstream< _CharT, _Traits, _Alloc >` Class Template Reference

2147

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

5.381.5.7 `template<typename _CharT, typename _Traits> iostate
std::basic_ios< _CharT, _Traits >::exceptions () const [inline,
inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 212 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.381.5.8 `template<typename _CharT, typename _Traits> void std::basic_ios<
_CharT, _Traits >::exceptions (iostate __except) [inline,
inherited]`

Throwing exceptions on errors.

Parameters

except The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
```

```

#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}

```

Definition at line 247 of file `basic_ios.h`.

5.381.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail() const [inline, inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 191 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

5.381.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill() const [inline, inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2149

Definition at line 360 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.381.5.11 `template<typename _CharT, typename _Traits> char_type
std::basic_ios<_CharT, _Traits>::fill (char_type __ch)
[inline, inherited]`

Sets a new *empty* character.

Parameters

ch The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 380 of file `basic_ios.h`.

5.381.5.12 `fmtflags std::ios_base::flags () const [inline, inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, and `std::operator>>()`.

5.381.5.13 `fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline,
inherited]`

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.381.5.14 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

5.381.5.15 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount () const [inline, inherited]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 249 of file istream.

5.381.5.16 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (void) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 236 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.381.5.17 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::get (char_type & __c) [inherited]`

Simple extraction.

Parameters

c The character in which to store data.

Returns

`*this`

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.381.5.18 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits>::get (char_type * __s, streamsize __n) [inline, inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

Returns

*this

Returns `get(s,n,widen('\n'))`.

Definition at line 333 of file `istream`.

5.381.5.19 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (__streambuf_type & __sb, char_type __delim) [inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

delim A "stop" character.

Returns

*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

5.381.5.20 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream<_CharT, _Traits>::get (__streambuf_type &
__sb) [inline, inherited]`

Extraction into another streambuf.

Parameters

sb A streambuf in which to store data.

Returns

*this

Returns `get(sb, widen('\n'))`.

Definition at line 366 of file istream.

5.381.5.21 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get
(char_type * __s, streamsize __n, char_type __delim)
[inherited]`

Simple multiple-character extraction.

Parameters

s Pointer to an array.

n Maximum number of characters to store in *s*.

delim A "stop" character.

Returns

*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.381.5.22 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n, char_type __delim)`
[**inherited**]

String extraction.

Parameters

s A character array in which to store the data.

n Maximum number of characters to extract.

delim A "stop" character.

Returns

*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2155

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.381.5.23 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline (char_type * __s, streamsize __n) [inline, inherited]`

String extraction.

Parameters

s A character array in which to store the data.

n Maximum number of characters to extract.

Returns

`*this`

Returns `getline(s,n,widen('\n'))`.

Definition at line 406 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

5.381.5.24 `locale std::ios_base::getloc () const [inline, inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

5.381.5.25 `template<typename _CharT, typename _Traits> bool
std::basic_ios< _CharT, _Traits >::good () const [inline,
inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 170 of file `basic_ios.h`.

5.381.5.26 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore
(streamsize __n) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 493 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

5.381.5.27 `template<typename _CharT , typename _Traits > basic_istream<
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore
(void) [inherited]`

Discarding characters.

Parameters

n Number of characters to discard.

delim A "stop" character.

Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `n != std::numeric_limits<int>::max()`, `n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `delim` (in this case, the character is extracted); note that this condition will never occur if `delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 460 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.28 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (streamsize __n, int_type __delim) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 555 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.381.5.29 `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue (const locale & __loc) [inherited]`

Moves to a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Reimplemented from `std::ios_base`.

Definition at line 113 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

5.381.5.30 `template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::init (basic_streambuf<
_CharT, _Traits> * __sb) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 125 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

5.381.5.31 `long& std::ios_base::iword (int __ix) [inline, inherited]`

Access to integer array.

Parameters

__ix Index into the array.

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2159

Definition at line 740 of file `ios_base.h`.

5.381.5.32 `template<typename _CharT, typename _Traits> char
std::basic_ios<_CharT, _Traits>::narrow (char_type __c, char
__dfault) const [inline, inherited]`

Squeezes characters.

Parameters

c The character to narrow.

dfault The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 420 of file `basic_ios.h`.

5.381.5.33 `template<typename _CharT, typename _Traits> std::basic_ios<
_CharT, _Traits>::operator void * () const [inline,
inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 111 of file `basic_ios.h`.

5.381.5.34 `template<typename _CharT, typename _Traits> bool
std::basic_ios<_CharT, _Traits>::operator! () const
[inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 115 of file `basic_ios.h`.

5.381.5.35 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (float __f)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 213 of file ostream.

5.381.5.36 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (bool __n)
[inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 173 of file ostream.

5.381.5.37 `template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream< _CharT, _Traits >::operator<< (unsigned
short __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 180 of file ostream.

5.381.5.38 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ostream_type &(*)(__ostream_type &) __pf) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 108 of file ostream.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the [num_get](#) facet) to perform numeric formatting.

Definition at line 221 of file ostream.

5.381.5.48 `template<typename _CharT , typename _Traits > basic_ostream<
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits
>::operator<< (__streambuf_type * __sb) [inherited]`

Extracting from another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into **this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.381.5.49 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline, inherited]`

Basic arithmetic inserters.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 165 of file ostream.

5.381.5.63 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

Parameters

sb A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.381.5.64 `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 181 of file istream.

5.381.5.65 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (
__istream_type &(*)(__istream_type &) __pf) [inline,
inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `ioanip` header.

Definition at line 120 of file `istream`.

5.381.5.66 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (__ios_type

Definition at line 124 of file `istream`.

5.381.5.67 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (unsigned
long & __n) [inline, inherited]`

Basic arithmetic extractors.

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 189 of file `istream`.

5.381.5.68 `template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream< _CharT, _Traits >::operator>> (unsigned
long long & __n) [inline, inherited]`

Basic arithmetic extractors.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2173

Parameters

A variable of builtin type.

Returns

**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 198 of file `istream`.

5.381.5.69 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek(void) [inherited]`

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.70 `streamsize std::ios_base::precision() const [inline, inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

5.381.5.71 `streamsize std::ios_base::precision (streamsize __prec)`
`[inline, inherited]`

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of `precision()`.

Definition at line 629 of file `ios_base.h`.

5.381.5.72 `template<typename _CharT, typename _Traits > basic_ostream<`
`_CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (`
`char_type __c) [inherited]`

Simple insertion.

Parameters

c The character to insert.

Returns

`*this`

Tries to insert *c*.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

5.381.5.73 `template<typename _CharT, typename _Traits > basic_istream<`
`_CharT, _Traits > & std::basic_istream< _CharT, _Traits`
`>::putback (char_type __c) [inherited]`

Unextracting a single character.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2175

Parameters

c The character to push back into the input stream.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

5.381.5.74 `void*& std::ios_base::pword (int __ix) [inline, inherited]`

Access to void pointer array.

Parameters

__ix Index into the array.

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file `ios_base.h`.

5.381.5.75 `template<typename _CharT, typename _Traits, typename _Alloc
> __stringbuf_type* std::basic_stringstream< _CharT, _Traits,
_Alloc >::rdbuf () const [inline]`

Accessing the underlying buffer.

Returns

The current [basic_stringbuf](#) buffer.

This hides both signatures of [std::basic_ios::rdbuf\(\)](#).

Reimplemented from [std::basic_ios< _CharT, _Traits >](#).

Definition at line 548 of file sstream.

5.381.5.76 `template<typename _CharT, typename _Traits> basic_streambuf<
_CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
basic_streambuf< _CharT, _Traits > * __sb) [inherited]`

Changing the underlying buffer.

Parameters

sb The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument [rdbuf\(\)](#), which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

Definition at line 52 of file basic_ios.tcc.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

5.381 std::basic_stringstream<_CharT, _Traits, _Alloc> Class Template Reference 2177

5.381.5.77 `template<typename _CharT, typename _Traits> istate
std::basic_ios<_CharT, _Traits>::rdstate() const [inline,
inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See [std::ios_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 127 of file `basic_ios.h`.

5.381.5.78 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read(
char_type * __s, streamsize __n) [inherited]`

Extraction without delimiters.

Parameters

- s* A character array.
- n* Maximum number of characters to store.

Returns

*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.79 `template<typename _CharT, typename _Traits> streamsize
std::basic_istream< _CharT, _Traits >::readsome (char_type *
__s, streamsize __n) [inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

- s* A character array.
- n* Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.381.5.80 `void std::ios_base::register_callback (event_callback __fn, int
__index) [inherited]`

Add the callback `__fn` with parameter `__index`.

Parameters

- __fn* The function to add.
- __index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.381.5.81 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg
(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current read position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 870 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.82 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg
(pos_type __pos) [inherited]`

Changing the current read position.

Parameters

pos A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 837 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.83 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(off_type __off, ios_base::seekdir __dir) [inherited]`

Changing the current write position.

Parameters

off A file offset object.

dir The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.84 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp(pos_type __pos) [inherited]`

Changing the current write position.

Parameters

pos A file position object.

Returns

*this

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2181

If `fail()` is not true, calls `rdbuf()` -> `pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.85 `fmtflags std::ios_base::setf(fmtflags __fmtfl) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.381.5.86 `fmtflags std::ios_base::setf(fmtflags __fmtfl, fmtflags __mask) [inline, inherited]`

Setting new format flags.

Parameters

fmtfl Additional flags to set.

mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.381.5.87 `template<typename _CharT, typename _Traits> void
std::basic_ios< _CharT, _Traits >::setstate (iostate __state)
[inline, inherited]`

Sets additional flags in the error state.

Parameters

state The additional state flag(s) to set.

See [std::ios_base::iostate](#) for the possible bit values.

Definition at line 147 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

5.381.5.88 `template<typename _CharT , typename _Traits , typename _Alloc
> __string_type std::basic_stringstream< _CharT, _Traits, _Alloc
>::str () const [inline]`

Copying out the string buffer.

Returns

`rdbuf() -> str()`

Definition at line 556 of file `sstream`.

5.381.5.89 `template<typename _CharT , typename _Traits , typename _Alloc
> void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (
const __string_type & __s) [inline]`

Setting a new buffer.

Parameters

s The string to use as a new sequence.

5.381 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference

2183

Calls `rdbuf()` \rightarrow `str(s)`.

Definition at line 566 of file `sstream`.

5.381.5.90 `template<typename _CharT, typename _Traits> int
std::basic_istream<_CharT, _Traits>::sync (void)
[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()` \rightarrow `pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 777 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.381.5.91 `static bool std::ios_base::sync_with_stdio (bool __sync = true)
[static, inherited]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.381.5.92 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg(void) [inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 813 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rddbuf()`.

5.381.5.93 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp() [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rddbuf()`.

5.381.5.94 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie(basic_ostream<_CharT, _Traits>* __tiestr) [inline, inherited]`

Ties this stream to an output stream.

Parameters

tiestr The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 297 of file basic_ios.h.

5.381.5.95 `template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits
>::tie() const [inline, inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, [std::cin](#) is tied to [std::cout](#).

Definition at line 285 of file basic_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

5.381.5.96 `template<typename _CharT, typename _Traits> basic_istream<
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget
(void) [inherited]`

Unextracting the previous character.

Returns

**this*

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sungetc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sungetc\(\)](#) fails, sets badbit in the error state.

Note

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

Definition at line 744 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sungetc()`.

5.381.5.97 `void std::ios_base::unsetf (fmtflags __mask) [inline, inherited]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file ios_base.h.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.381.5.98 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline, inherited]`

Widens characters.

Parameters

c The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localizati>

Definition at line 439 of file basic_ios.h.

Referenced by `std::endl()`, `std::getline()`, and `std::operator>>()`.

5.381 std::basic_stringstream< _CharT, _Traits, _Alloc > Class Template Reference **2187**

5.381.5.99 `streamsize std::ios_base::width (streamsize __wide) [inline, inherited]`

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of `width()`.

Definition at line 652 of file `ios_base.h`.

5.381.5.100 `streamsize std::ios_base::width () const [inline, inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::operator>>()`.

5.381.5.101 `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]`

Character string insertion.

Parameters

s The array to insert.

n Maximum number of characters to insert.

Returns

`*this`

Characters are copied from *s* and inserted into the stream until one of the following happens:

- n characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

5.381.5.102 `static int std::ios_base::xalloc () throw () [static, inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.381.6 Member Data Documentation

5.381.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 79 of file `istream`.

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.381.6.12 const seekdir std::ios_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.381.6.13 const iostate std::ios_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.381.6.14 const iostate std::ios_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.381.6.15 const fmtflags std::ios_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.381.6.16 const fmtflags std::ios_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 315 of file ios_base.h.

5.381.6.17 const iostate std::ios_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.381.6.18 const fmtflags std::ios_base::hex [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.381.6.19 const openmode std::ios_base::in [static, inherited]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.381.6.20 const fmtflags std::ios_base::internal [static, inherited]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.381.6.21 const fmtflags std::ios_base::left [static, inherited]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.381.6.22 const fmtflags std::ios_base::oct [static, inherited]

Converts integer input or generates integer output in octal base.

Definition at line 278 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::operator<<().

5.381.6.23 const openmode std::ios_base::out [static, inherited]

Open for output. Default for ofstream and fstream.

Definition at line 377 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::seekp(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.381.6.24 const fmtflags std::ios_base::right [static, inherited]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file ios_base.h.

5.381.6.25 const fmtflags std::ios_base::scientific [static, inherited]

Generates floating-point output in scientific notation.

Definition at line 285 of file ios_base.h.

5.381.6.26 const fmtflags std::ios_base::showbase [static, inherited]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file ios_base.h.

5.381.6.27 const fmtflags std::ios_base::showpoint [static, inherited]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file ios_base.h.

5.381.6.28 const fmtflags std::ios_base::showpos [static, inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file ios_base.h.

5.381.6.29 const fmtflags std::ios_base::skipws [static, inherited]

Skips leading white space before certain input operations.

Definition at line 299 of file ios_base.h.

5.381.6.30 const openmode std::ios_base::trunc [static, inherited]

Open for input. Default for ofstream.

Definition at line 380 of file ios_base.h.

5.381.6.31 const fmtflags std::ios_base::unitbuf [static, inherited]

Flushes output after each output operation.

Definition at line 302 of file ios_base.h.

5.381.6.32 const fmtflags std::ios_base::uppercase [static, inherited]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.382.1 Detailed Description

A Bernoulli random number distribution. Generates a sequence of true and false values with likelihood p that true will come up and $(1 - p)$ that false will appear.

Definition at line 3243 of file random.h.

5.382.2 Member Typedef Documentation

5.382.2.1 typedef bool std::bernoulli_distribution::result_type

The type of the range of the distribution.

Definition at line 3247 of file random.h.

5.382.3 Constructor & Destructor Documentation

5.382.3.1 `std::bernoulli_distribution::bernoulli_distribution (double __p = 0.5) [inline, explicit]`

Constructs a Bernoulli distribution with likelihood `p`.

Parameters

`__p` [IN] The likelihood of a true result being returned. Must be in the interval `[0, 1]`.

Definition at line 3280 of file `random.h`.

5.382.4 Member Function Documentation

5.382.4.1 `result_type std::bernoulli_distribution::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 3330 of file `random.h`.

5.382.4.2 `result_type std::bernoulli_distribution::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3323 of file `random.h`.

5.382.4.3 `template<typename _UniformRandomNumberGenerator> result_type std::bernoulli_distribution::operator() (_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

Definition at line 3338 of file `random.h`.

References `operator()()`, and `param()`.

Referenced by `operator()()`.

5.382.4.4 `double std::bernoulli_distribution::p () const [inline]`

Returns the `p` parameter of the distribution.

Definition at line 3301 of file `random.h`.

5.382.4.5 `void std::bernoulli_distribution::param (const param_type & __param) [inline]`

Sets the parameter set of the distribution.

Parameters

`__param` The new parameter set of the distribution.

Definition at line 3316 of file `random.h`.

5.382.4.6 `param_type std::bernoulli_distribution::param () const [inline]`

Returns the parameter set of the distribution.

Definition at line 3308 of file `random.h`.

Referenced by `operator()()`, `std::operator==()`, and `std::operator>>()`.

5.382.4.7 `void std::bernoulli_distribution::reset () [inline]`

Resets the distribution state.

Does nothing for a Bernoulli distribution.

Definition at line 3295 of file `random.h`.

5.389.4 Friends And Related Function Documentation

5.389.4.1 `template<typename _IntType = int> template<typename _IntType1 ,
typename _CharT , typename _Traits > std::basic_ostream< _CharT ,
_Traits>& operator<<(std::basic_ostream< _CharT , _Traits > & ,
const std::binomial_distribution< _IntType1 > &) [friend]`

Inserts a binomial_distribution random number distribution __x into the output stream __os.

Parameters

__os An output stream.

__x A binomial_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

5.389.4.2 `template<typename _IntType = int> template<typename _IntType1
> bool operator==(const std::binomial_distribution< _IntType1 >
& __d1, const std::binomial_distribution< _IntType1 > & __d2)
[friend]`

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3553 of file random.h.

5.389.4.3 `template<typename _IntType = int> template<typename _IntType1 ,
typename _CharT , typename _Traits > std::basic_istream<_CharT,
_Traits>& operator>> (std::basic_istream<_CharT, _Traits > & ,
std::binomial_distribution<_IntType1 > &) [friend]`

Extracts a `binomial_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `binomial_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

5.391.1 Detailed Description

template<size_t _Nb> class std::bitset< _Nb >

The bitset class represents a *fixed-size* sequence of bits. (Note that bitset does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let B be the number of bits in a word, then (Nb+(B-1))/B words will be used for storage. B - NbB bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `bitset` as *a simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index `Nb-1` in the *most significant / left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
    long          a = 'a';
    bitset<10>    b(a);

    cout << "b('a') is " << b << endl;

    ostringstream s;
    s << b;
    string str = s.str();
    cout << "index 3 in the string is " << str[3] << " but\n"
         << "index 3 in the bitset is " << b[3] << endl;
}
```

Also see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch33s02.html> for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the `bitset` is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` is a regular array, and is indexed as such. This is carefully encapsulated.

Definition at line 708 of file `bitset`.

5.391.2 Constructor & Destructor Documentation

5.391.2.1 template<size_t _Nb> std::bitset< _Nb >::bitset () [inline]

All bits set to zero.

Definition at line 802 of file `bitset`.

5.391.2.2 `template<size_t _Nb> std::bitset< _Nb >::bitset (unsigned long long __val) [inline]`

Initial bits bitwise-copied from a single word (others set to zero).

Definition at line 807 of file `bitset`.

5.391.2.3 `template<size_t _Nb> template<class _CharT , class _Traits , class _Alloc > std::bitset< _Nb >::bitset (const std::basic_string< _CharT, _Traits, _Alloc > & __s, size_t __position = 0) [inline, explicit]`

Use a subset of a string.

Parameters

s A string of *0* and *1* characters.

position Index of the first character in *s* to use; defaults to zero.

Exceptions

std::out_of_range If *pos* is bigger the size of *s*.

std::invalid_argument If a character appears in the string which is neither *0* nor *1*.

Definition at line 825 of file `bitset`.

5.391.2.4 `template<size_t _Nb> template<class _CharT , class _Traits , class _Alloc > std::bitset< _Nb >::bitset (const std::basic_string< _CharT, _Traits, _Alloc > & __s, size_t __position, size_t __n) [inline]`

Use a subset of a string.

Parameters

s A string of *0* and *1* characters.

position Index of the first character in *s* to use.

n The number of characters to copy.

Exceptions

std::out_of_range If *pos* is bigger the size of *s*.

std::invalid_argument If a character appears in the string which is neither *0* nor *1*.

Definition at line 847 of file `bitset`.

5.391.2.5 `template<size_t _Nb> std::bitset< _Nb >::bitset (const char * __str
) [inline, explicit]`

Construct from a string.

Parameters

str A string of 0 and 1 characters.

Exceptions

std::invalid_argument If a character appears in the string which is neither 0 nor 1.

Definition at line 879 of file `bitset`.

5.391.3 Member Function Documentation

5.391.3.1 `template<size_t _Nb> bool std::bitset< _Nb >::all () const
[inline]`

Tests whether all the bits are on.

Returns

True if all the bits are set.

Definition at line 1266 of file `bitset`.

5.391.3.2 `template<size_t _Nb> bool std::bitset< _Nb >::any () const
[inline]`

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

Definition at line 1274 of file `bitset`.

5.391.3.3 `template<size_t _Nb> size_t std::bitset< _Nb >::count () const
[inline]`

Returns the number of bits which are set.

Definition at line 1226 of file `bitset`.

5.391.3.4 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::flip (`
`size_t __position) [inline]`

Toggles a given bit to its opposite value.

Parameters

position The index of the bit.

Exceptions

[*std::out_of_range*](#) If *pos* is bigger the size of the set.

Definition at line 1066 of file `bitset`.

5.391.3.5 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::flip ()`
`[inline]`

Toggles every bit to its opposite value.

Definition at line 1053 of file `bitset`.

5.391.3.6 `template<size_t _Nb> bool std::bitset<_Nb>::none () const`
`[inline]`

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

Definition at line 1282 of file `bitset`.

5.391.3.7 `template<size_t _Nb> bool std::bitset<_Nb>::operator!= (const`
`bitset<_Nb> & __rhs) const [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1241 of file `bitset`.

5.391.3.8 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>`
`>::operator&= (const bitset<_Nb> & __rhs) [inline]`

Operations on bitsets.

Parameters

rhs A same-sized bitset.

These should be self-explanatory.

Definition at line 900 of file bitset.

5.391.3.9 `template<size_t _Nb> bitset<_Nb> std::bitset< _Nb
>::operator<<(size_t __position) const [inline]`

Self-explanatory.

Definition at line 1288 of file bitset.

5.391.3.10 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::operator<<=(size_t __position) [inline]`

Operations on bitsets.

Parameters

position The number of places to shift.

These should be self-explanatory.

Definition at line 929 of file bitset.

5.391.3.11 `template<size_t _Nb> bool std::bitset< _Nb >::operator==(const
bitset< _Nb > & __rhs) const [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1237 of file bitset.

5.391.3.12 `template<size_t _Nb> bitset<_Nb> std::bitset< _Nb
>::operator>>(size_t __position) const [inline]`

Self-explanatory.

Definition at line 1292 of file bitset.

5.391.3.13 `template<size_t _Nb> bitset<_Nb>& std::bitset< _Nb
>::operator>>=(size_t __position) [inline]`

Operations on bitsets.

Parameters

position The number of places to shift.

These should be self-explanatory.

Definition at line 942 of file `bitset`.

5.391.3.14 `template<size_t _Nb> bool std::bitset<_Nb>::operator[] (size_t
__position) const [inline]`

Array-indexing support.

Parameters

position Index into the `bitset`.

Returns

A `bool` for a *const* `bitset`. For non-const `bitsets`, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1098 of file `bitset`.

5.391.3.15 `template<size_t _Nb> reference std::bitset<_Nb>::operator[] (
size_t __position) [inline]`

Array-indexing support.

Parameters

position Index into the `bitset`.

Returns

A `bool` for a *const* `bitset`. For non-const `bitsets`, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1094 of file `bitset`.

5.391.3.16 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator^=(const bitset<_Nb> & __rhs) [inline]`

Operations on bitsets.

Parameters

rhs A same-sized bitset.

These should be self-explanatory.

Definition at line 914 of file `bitset`.

5.391.3.17 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator|=(const bitset<_Nb> & __rhs) [inline]`

Operations on bitsets.

Parameters

rhs A same-sized bitset.

These should be self-explanatory.

Definition at line 907 of file `bitset`.

5.391.3.18 `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb>::operator~() const [inline]`

See the no-argument [flip\(\)](#).

Definition at line 1075 of file `bitset`.

5.391.3.19 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::reset () [inline]`

Sets every bit to false.

Definition at line 1028 of file `bitset`.

5.391.3.20 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::reset (size_t __position) [inline]`

Sets a given bit to false.

Parameters

position The index of the bit.

Exceptions

[*std::out_of_range*](#) If *pos* is bigger the size of the set.

Same as writing `set (pos, false)`.

Definition at line 1042 of file `bitset`.

5.391.3.21 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::set () [inline]`

Sets every bit to true.

Definition at line 1003 of file `bitset`.

5.391.3.22 `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::set (size_t __position, bool __val = true) [inline]`

Sets a given bit to a particular value.

Parameters

position The index of the bit.

val Either true or false, defaults to true.

Exceptions

[*std::out_of_range*](#) If *pos* is bigger the size of the set.

Definition at line 1017 of file `bitset`.

5.391.3.23 `template<size_t _Nb> size_t std::bitset< _Nb >::size () const`
`[inline]`

Returns the total number of bits.

Definition at line 1231 of file `bitset`.

5.391.3.24 `template<size_t _Nb> bool std::bitset< _Nb >::test (size_t`
`__position) const [inline]`

Tests the value of a bit.

Parameters

position The index of a bit.

Returns

The value at *pos*.

Exceptions

[*std::out_of_range*](#) If *pos* is bigger the size of the set.

Definition at line 1252 of file `bitset`.

5.391.3.25 `template<size_t _Nb> template<class _CharT , class _Traits , class`
`_Alloc > std::basic_string< _CharT, _Traits, _Alloc> std::bitset<`
`_Nb >::to_string () const [inline]`

Returns a character interpretation of the `bitset`.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1128 of file `bitset`.

5.391.3.26 `template<size_t _Nb> unsigned long std::bitset< _Nb >::to_ulong (`
`) const [inline]`

Returns a numerical interpretation of the `bitset`.

Returns

The integral equivalent of the bits.

Exceptions

[*std::overflow_error*](#) If there are too many bits to be represented in an unsigned long.

Definition at line 1109 of file `bitset`.

5.392.1 Detailed Description

template<size_t _Nb> class std::bitset< _Nb >::reference

This encapsulates the concept of a single bit. An instance of this class is a proxy for an actual bit; this way the individual bit operations are done as faster word-size bitwise instructions.

Most users will never need to use this class directly; conversions to and from bool are automatic and should be transparent. Overloaded operators help to preserve the illusion.

(On a typical system, this *bit reference* is 64 times the size of an actual bit. Ha.)

Definition at line 739 of file `bitset`.

5.399.3 Member Function Documentation

5.399.3.1 `template<typename _RealType = double> result_type
std::chi_squared_distribution< _RealType >::max () const
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 2622 of file random.h.

5.399.3.2 `template<typename _RealType = double> result_type
std::chi_squared_distribution< _RealType >::min () const
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2615 of file random.h.

5.399.3.3 `template<typename _RealType = double> template<typename
_UniformRandomNumberGenerator > result_type
std::chi_squared_distribution< _RealType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

Definition at line 2630 of file random.h.

5.399.3.4 `template<typename _RealType = double> param_type
std::chi_squared_distribution< _RealType >::param () const
[inline]`

Returns the parameter set of the distribution.

Definition at line 2600 of file random.h.

5.399.3.5 `template<typename _RealType = double> void
std::chi_squared_distribution< _RealType >::param (const
param_type & __param) [inline]`

Sets the parameter set of the distribution.

Parameters

__param The new parameter set of the distribution.

Definition at line 2608 of file random.h.

5.399.3.6 `template<typename _RealType = double> void
std::chi_squared_distribution< _RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2586 of file random.h.

References `std::gamma_distribution< _RealType >::reset()`.

5.399.4 Friends And Related Function Documentation

5.399.4.1 `template<typename _RealType = double> template<typename
_RealType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<<
(std::basic_ostream< _CharT, _Traits > & , const
std::chi_squared_distribution< _RealType1 > &) [friend]`

Inserts a `chi_squared_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

__os An output stream.

__x A `chi_squared_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

5.399.4.2 `template<typename _RealType = double> template<typename _
RealType1 > bool operator==(const std::chi_squared_distribution<
_RealType1 > & __d1, const std::chi_squared_distribution<
_RealType1 > & __d2) [friend]`

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2650 of file random.h.

5.399.4.3 `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits> &, std::chi_squared_distribution<_RealType1> &) [friend]`

Extracts a `chi_squared_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `chi_squared_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

5.406.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT> class std::codecvt< _InternT, _ExternT, _StateT >

Primary class template codecvt.

NB: Generic, mostly useless implementation.

Definition at line 275 of file codecvt.h.

5.406.2 Member Function Documentation

5.406.2.1 **template<typename _InternT , typename _ExternT , typename _StateT > virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const** **[protected, virtual]**

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

[out](#) for more information.

Implements [std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >](#).

5.406.2.2 **template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next) const** **[inline, inherited]**

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.
from Start of input.
from_end End of input.
from_next Returns start of unconverted data.
to Start of output buffer.
to_end End of output buffer.
to_next Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 195 of file `codecvt.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::underflow()`.

5.406.2.3 `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const [inline, inherited]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

5.406 std::codecvt<_InternT, _ExternT, _StateT > Class Template Reference 2247

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

state Persistent conversion state data.

from Start of input.

from_end End of input.

from_next Returns start of unconverted data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 115 of file codecvt.h.

```
5.406.2.4 template<typename _InternT, typename _ExternT, typename
        _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,
        _StateT >::unshift ( state_type & __state, extern_type * __to,
        extern_type * __to_end, extern_type *& __to_next ) const
        [inline, inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

- state* Persistent conversion state data.
- to* Start of output buffer.
- to_end* End of output buffer.
- to_next* Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 154 of file `codecvt.h`.

from_next Returns start of unconverted data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 115 of file codecvt.h.

5.407.2.4 result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (state_type & __state, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const
[inline, inherited]

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

state Persistent conversion state data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 154 of file codecvt.h.

5.408.1 Detailed Description

`template<> class std::codecvt< char, char, mbstate_t >`

class `codecvt<char, char, mbstate_t>` specialization.

Definition at line 337 of file `codecvt.h`.

5.408.2 Member Function Documentation

5.408.2.1 virtual result `std::__codecvt_abstract_base< char , char , mbstate_t >::do_out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const` [`protected`, `pure virtual`, `inherited`]

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

See also

out for more information.

5.408.2.2 result `std::__codecvt_abstract_base< char , char , mbstate_t >::in (state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next) const` [`inline`, `inherited`]

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted

character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.
from Start of input.
from_end End of input.
from_next Returns start of unconverted data.
to Start of output buffer.
to_end End of output buffer.
to_next Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 195 of file `codecvt.h`.

5.408.2.3 `result std::__codecvt_abstract_base< char , char , mbstate_t >::out (state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next) const [inline, inherited]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.
from Start of input.
from_end End of input.
from_next Returns start of unconverted data.
to Start of output buffer.
to_end End of output buffer.
to_next Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 115 of file `codecvt.h`.

5.408.2.4 `result std::__codecvt_abstract_base< char , char , mbstate_t
 >::unshift (state_type & __state, extern_type * __to, extern_type
 * __to_end, extern_type *& __to_next) const [inline,
 inherited]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

5.409 `std::codecvt< wchar_t, char, mbstate_t >` Class Template Reference 2259

Parameters

- state* Persistent conversion state data.
- to* Start of output buffer.
- to_end* End of output buffer.
- to_next* Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 154 of file `codecvt.h`.

Definition at line 115 of file `codecvt.h`.

```
5.411.2.4 template<typename _InternT, typename _ExternT, typename
    _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,
    _StateT >::unshift ( state_type & __state, extern_type * __to,
    extern_type * __to_end, extern_type *& __to_next ) const
    [inline, inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

state Persistent conversion state data.

to Start of output buffer.

to_end End of output buffer.

to_next Returns start of unused output area.

Returns

`codecvt_base::result`.

Definition at line 154 of file `codecvt.h`.

5.412.1 Detailed Description

template<typename _CharT> class std::collate<_CharT>

Facet for localized string comparison. This facet encapsulates the code to compare strings in a localized manner.

The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.

Definition at line 616 of file locale_classes.h.

5.412.2 Member Typedef Documentation

5.412.2.1 `template<typename _CharT> typedef _CharT std::collate<_CharT>::char_type`

Public typedefs.

Reimplemented in [std::collate_byname<_CharT>](#).

Definition at line 622 of file locale_classes.h.

5.412.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::collate<_CharT>::string_type`

Public typedefs.

Reimplemented in [std::collate_byname<_CharT>](#).

Definition at line 623 of file locale_classes.h.

5.412.3 Constructor & Destructor Documentation

5.412.3.1 `template<typename _CharT> std::collate<_CharT>::collate (size_t __refs = 0) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

refs Passed to the base facet class.

Definition at line 643 of file locale_classes.h.

5.412.3.2 `template<typename _CharT> std::collate<_CharT>::collate (__c_locale __cloc, size_t __refs = 0) [inline, explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

cloc The C locale.
refs Passed to the base facet class.

Definition at line 657 of file locale_classes.h.

5.412.3.3 `template<typename _CharT> virtual std::collate<_CharT>::~collate() [inline, protected, virtual]`

Destructor.

Definition at line 720 of file locale_classes.h.

5.412.4 Member Function Documentation

5.412.4.1 `template<typename _CharT> int std::collate<_CharT>::compare (const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2) const [inline]`

Compare two strings.

This function compares two strings and returns the result by calling [collate::do_compare\(\)](#).

Parameters

lo1 Start of string 1.
hi1 End of string 1.
lo2 Start of string 2.
hi2 End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 674 of file locale_classes.h.

5.412.4.2 `template<typename _CharT> int std::collate<_CharT>::do_compare (const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2) const [protected, virtual]`

Compare two strings.

This function is a hook for derived classes to change the value returned.

See also

[compare\(\)](#).

Parameters

lo1 Start of string 1.

hi1 End of string 1.

lo2 Start of string 2.

hi2 End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 134 of file locale_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::length()`.

5.412.4.3 `template<typename _CharT> long std::collate<_CharT>
>::do_hash (const _CharT * __lo, const _CharT * __hi) const
[protected, virtual]`

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

lo Start of string.

hi End of string.

Returns

Hash value.

Definition at line 229 of file locale_classes.tcc.

5.412.4.4 `template<typename _CharT> collate<_CharT>::string_type
std::collate<_CharT>::do_transform (const _CharT * __lo, const
_CharT * __hi) const [protected, virtual]`

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

Parameters

- lo1* Start of string 1.
- hi1* End of string 1.
- lo2* Start of string 2.
- hi2* End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 173 of file locale_classes.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::length()`, and `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`.

5.412.4.5 `template<typename _CharT> long std::collate< _CharT >::hash (const _CharT * __lo, const _CharT * __hi) const [inline]`

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning [collate::do_hash\(\)](#).

Parameters

- lo* Start of string.
- hi* End of string.

Returns

Hash value.

Definition at line 707 of file locale_classes.h.

5.412.4.6 `template<typename _CharT> string_type std::collate< _CharT >::transform (const _CharT * __lo, const _CharT * __hi) const [inline]`

Transform string to comparable form.

This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning [collate::do_transform\(\)](#).

Parameters

lo Start of string.

hi End of string.

Returns

Transformed string_type.

Definition at line 693 of file locale_classes.h.

Referenced by std::regex_traits< _Ch_type >::transform().

5.412.5 Member Data Documentation

5.412.5.1 `template<typename _CharT> locale::id std::collate< _CharT >::id` `[static]`

5.422.1 Detailed Description

template<typename _CharT> class std::ctype< _CharT >

Primary class template ctype facet.

This template class defines classification and conversion functions for character sets. It wraps ctype functionality. Ctype gets used by streams for many I/O operations. This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in [__ctype_abstract_base](#), to allow for implementation flexibility. See [ctype<wchar_t>](#) for an example. The functions are documented in [__ctype_abstract_base](#).

Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

Definition at line 604 of file locale_facets.h.

5.422.2 Member Typedef Documentation

5.422.2.1 **template<typename _CharT> typedef _CharT std::ctype< _CharT >::char_type**

Typedef for the template parameter.

Reimplemented from [std::__ctype_abstract_base< _CharT >](#).

Definition at line 608 of file locale_facets.h.

5.422.3 Member Function Documentation

5.422.3.1 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const [protected, virtual]`

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do_is\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.2 `template<typename _CharT> virtual bool std::ctype<_CharT>::do_is (mask __m, char_type __c) const [protected, virtual]`

Test char_type classification.

This function finds a mask M for c and compares it to mask m.

[do_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do_is\(\)](#) must always return the same result for the same input.

Parameters

c The char_type to find the mask of.

m The mask to compare against.

Returns

(M & m) != 0.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.422.3.3 `template<typename _CharT> virtual char std::ctype<_CharT>::do_narrow (char_type, char __dfault) const [protected, virtual]`

Narrow char_type to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead.

[do_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char_type to convert.

dfault Char to return if conversion fails.

Returns

The converted char.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.422.3.4 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, virtual]`

Narrow char_type array to char.

This virtual function converts each char_type in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *dfault* is used instead.

[do_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

dfault Char to use if conversion fails.

to Pointer to the destination array.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.5 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find char_type matching mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do_is\(\)](#) must always return the same result for the same input.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *hi*.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.6 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_not (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do_is\(\)](#) must always return the same result for the same input.

Parameters

m The mask to compare against.
lo Pointer to start of range.
hi Pointer to end of range.

Returns

Pointer to a non-matching `char_type` if found, else *hi*.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.7 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_tolower (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.
hi Pointer to end of range.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.8 `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_tolower (char_type) const [protected, virtual]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The lowercase char_type if convertible, else *c*.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.9 `template<typename _CharT> virtual const char_type* std::ctype<
_CharT >::do_toupper(char_type * __lo, const char_type * __hi)
const [protected, virtual]`

Convert array to uppercase.

This virtual function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.10 `template<typename _CharT> virtual char_type std::ctype<
_CharT >::do_toupper(char_type) const [protected,
virtual]`

Convert to uppercase.

This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

c The char_type to convert.

Returns

The uppercase char_type if convertible, else *c*.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.11 `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_widen (char) const [protected, virtual]`

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted char_type

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.12 `template<typename _CharT> virtual const char* std::ctype<_CharT>::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [protected, virtual]`

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.422.3.13 `template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is(mask __m, char_type __c) const [inline, inherited]`

Test char_type classification.

This function finds a mask *M* for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

c The char_type to compare the mask of.

m The mask to compare against.

Returns

(*M* & *m*) != 0.

Definition at line 161 of file locale_facets.h.

Referenced by `std::regex_traits< _Ch_type >::isctype()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

5.422.3.14 `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::is(const char_type * __lo, const char_type * __hi, mask * __vec) const [inline, inherited]`

Return a mask array.

This function finds the mask for each char_type in the range [*lo*,*hi*) and successively writes it to *vec*. *vec* must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

Definition at line 178 of file locale_facets.h.

5.422.3.15 `template<typename _CharT> char std::__ctype_abstract_base<_CharT>::narrow (char_type __c, char __dfault) const
[inline, inherited]`

Narrow `char_type` to `char`.

This function converts the `char_type` to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

Returns

The converted `char`.

Definition at line 323 of file `locale_facets.h`.

Referenced by `std::time_put<_CharT, _OutIter>::put()`.

5.422.3.16 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::narrow (const char_type
* __lo, const char_type * __hi, char __dfault, char * __to) const
[inline, inherited]`

Narrow array to `char` array.

This function converts each `char_type` in the input to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, `dfault` is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Definition at line 345 of file locale_facets.h.

```
5.422.3.17 template<typename _CharT> const char_type*  
std::__ctype_abstract_base< _CharT >::scan_is ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline,  
inherited]
```

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning [ctype<char_type>::do_scan_is\(\)](#).

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to matching char_type if found, else *hi*.

Definition at line 194 of file locale_facets.h.

```
5.422.3.18 template<typename _CharT> const char_type*  
std::__ctype_abstract_base< _CharT >::scan_not ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline,  
inherited]
```

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning [ctype<char_type>::do_scan_not\(\)](#).

Parameters

m The mask to compare against.

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale_facets.h.

5.422.3.19 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::tolower (char_type *
__lo, const char_type * __hi) const [inline, inherited]`

Convert array to lowercase.

This function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 268 of file `locale_facets.h`.

5.422.3.20 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper(c)`.

Parameters

c The `char_type` to convert.

Returns

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file `locale_facets.h`.

5.422.3.21 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::toupper (char_type *
__lo, const char_type * __hi) const [inline, inherited]`

Convert array to uppercase.

This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 239 of file `locale_facets.h`.

5.422.3.22 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper (char_type __c) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

Definition at line 224 of file `locale_facets.h`.

5.422.3.23 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen (char __c) const [inline, inherited]`

Widen char to `char_type`.

This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted char_type.

Definition at line 285 of file locale_facets.h.

Referenced by std::money_get<_CharT, _InIter>::do_get(), std::time_put<_CharT, _OutIter>::do_put(), std::money_put<_CharT, _OutIter>::do_put(), std::regex_traits<_Ch_type>::istype(), and std::operator<<().

5.422.3.24 `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 304 of file locale_facets.h.

5.422.4 Member Data Documentation

5.422.4.1 `template<typename _CharT> locale::id std::ctype<_CharT>::id [static]`

The facet id for ctype<char_type>

Definition at line 612 of file locale_facets.h.

The documentation for this class was generated from the following file:

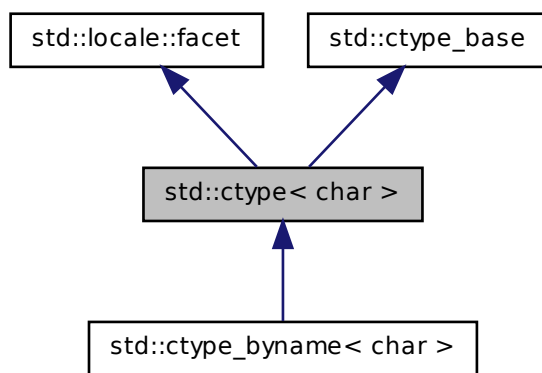

- [locale_facets.h](#)

5.423 std::ctype< char > Class Template Reference

The `ctype<char>` specialization.

This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

Inheritance diagram for std::ctype< char >:

5.423.1 Detailed Description

`template<> class std::ctype< char >`

The [ctype<char>](#) specialization.

This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

Definition at line 673 of file `locale_facets.h`.

5.423.2 Member Typedef Documentation

5.423.2.1 `typedef char std::ctype< char >::char_type`

Typedef for the template parameter char.

Definition at line 678 of file locale_facets.h.

5.423.3 Constructor & Destructor Documentation

5.423.3.1 `std::ctype< char >::ctype (const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

table If non-zero, table is used as the per-char mask. Else [classic_table\(\)](#) is used.

del If true, passes ownership of table to this facet.

refs Passed to the base facet class.

5.423.3.2 `std::ctype< char >::ctype (__c_locale __cloc, const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]`

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

Parameters

cloc Handle to C locale data.

table If non-zero, table is used as the per-char mask.

del If true, passes ownership of table to this facet.

refs Passed to the base facet class.

5.423.3.3 `virtual std::ctype< char >::~~ctype () [protected, virtual]`

Destructor.

This function deletes [table\(\)](#) if *del* was true in the constructor.

5.423.4 Member Function Documentation

5.423.4.1 `static const mask* std::ctype< char >::classic_table () throw ()`
`[static]`

Returns a pointer to the C locale mask table.

5.423.4.2 `virtual char std::ctype< char >::do_narrow (char_type __c, char`
`)const [inline, protected, virtual]`

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

dfault Char to return if conversion fails.

Returns

The converted char.

Definition at line 1123 of file `locale_facets.h`.

5.423.4.3 `virtual const char_type* std::ctype< char >::do_narrow (const`
`char_type * __lo, const char_type * __hi, char, char * __dest)`
`const [inline, protected, virtual]`

Narrow char array to char array.

This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.
hi Pointer to end of range.
dfault Char to use if conversion fails.
to Pointer to the destination array.

Returns

hi.

Definition at line 1149 of file locale_facets.h.

5.423.4.4 `virtual const char_type* std::ctype< char >::do_tolower (char_type
 * __lo, const char_type * __hi) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to first char in range.
hi Pointer to end of range.

Returns

hi.

5.423.4.5 `virtual char_type std::ctype< char >::do_tolower (char_type)
 const [protected, virtual]`

Convert to lowercase.

This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The lowercase char if convertible, else *c*.

5.423.4.6 `virtual const char_type* std::ctype< char >::do_toupper (char_type
* __lo, const char_type* __hi) const [protected, virtual]`

Convert array to uppercase.

This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.423.4.7 `virtual char_type std::ctype< char >::do_toupper (char_type)
const [protected, virtual]`

Convert to uppercase.

This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The uppercase char if convertible, else *c*.

5.423.4.8 **virtual** char_type std::ctype< char >::do_widen (char __c) const [inline, protected, virtual]

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be returned unchanged.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted character.

Definition at line 1074 of file `locale_facets.h`.

5.423.4.9 **virtual const** char* std::ctype< char >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [inline, protected, virtual]

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 1097 of file `locale_facets.h`.

5.423.4.10 `const char * std::ctype< char >::is (const char * __lo, const char * __hi, mask * __vec) const [inline]`

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

Definition at line 46 of file ctype_inline.h.

5.423.4.11 `bool std::ctype< char >::is (mask __m, char __c) const [inline]`

Test char classification.

This function compares the mask table[c] to *m*.

Parameters

c The char to compare the mask of.

m The mask to compare against.

Returns

True if *m* & table[c] is true, false otherwise.

Definition at line 41 of file ctype_inline.h.

5.423.4.12 `char std::ctype< char >::narrow (char_type __c, char __dfault) const [inline]`

Narrow char.

This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The char to convert.
- dfault* Char to return if conversion fails.

Returns

The converted character.

Definition at line 922 of file `locale_facets.h`.

5.423.4.13 `const char_type* std::ctype<char>::narrow (const char_type *
__lo, const char_type * __hi, char __dfault, char * __to) const
[inline]`

Narrow char array.

This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_narrow(lo, hi, dfault, to)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Definition at line 955 of file `locale_facets.h`.

5.423.4.14 `const char * std::ctype< char >::scan_is (mask __m, const char * __lo, const char * __hi) const [inline]`

Find char matching a mask.

This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a matching char if found, else *hi*.

Definition at line 55 of file ctype_inline.h.

5.423.4.15 `const char * std::ctype< char >::scan_not (mask __m, const char * __lo, const char * __hi) const [inline]`

Find char not matching a mask.

This function searches for and returns a pointer to the first char in [lo,hi) for which is(m,char) is false.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a non-matching char if found, else *hi*.

Definition at line 65 of file ctype_inline.h.

5.423.4.16 `const mask* std::ctype< char >::table () const throw () [inline]`

Returns a pointer to the mask table provided to the constructor, or /// the default from [classic_table\(\)](#) if none was provided.

Definition at line 973 of file locale_facets.h.

5.423.4.17 `char_type std::ctype< char >::tolower (char_type __c) const` **[inline]**

Convert to lowercase.

This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`tolower()` acts as if it returns `ctype<char>::do_tolower(c)`. `do_tolower()` must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The lowercase char if convertible, else *c*.

Definition at line 827 of file locale_facets.h.

5.423.4.18 `const char_type* std::ctype< char >::tolower (char_type * __lo, const char_type * __hi) const` **[inline]**

Convert array to lowercase.

This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

`tolower()` acts as if it returns `ctype<char>::do_tolower(lo, hi)`. `do_tolower()` must always return the same result for the same input.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

hi.

Definition at line 844 of file locale_facets.h.

5.423.4.19 `const char_type* std::ctype< char >::toupper (char_type * __lo, const char_type * __hi) const` **[inline]**

Convert array to uppercase.

This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(lo, hi)`. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

hi.

Definition at line 811 of file locale_facets.h.

5.423.4.20 char_type std::ctype< char >::toupper (char_type __c) const [inline]

Convert to uppercase.

This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(c)`. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The uppercase char if convertible, else *c*.

Definition at line 794 of file locale_facets.h.

5.423.4.21 char_type std::ctype< char >::widen (char __c) const [inline]

Widen char.

This function converts the char to char_type using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted character.

Definition at line 864 of file locale_facets.h.

5.423.4.22 `const char* std::ctype< char >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline]`

Widen char array.

This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 891 of file locale_facets.h.

5.423.5 Member Data Documentation

5.423.5.1 `locale::id std::ctype< char >::id [static]`

The facet id for `ctype<char>`

Definition at line 695 of file locale_facets.h.

5.423.5.2 `const size_t std::ctype< char >::table_size [static]`

The size of the mask table. It is `SCHAR_MAX + 1`.

Definition at line 697 of file locale_facets.h.

The documentation for this class was generated from the following files:

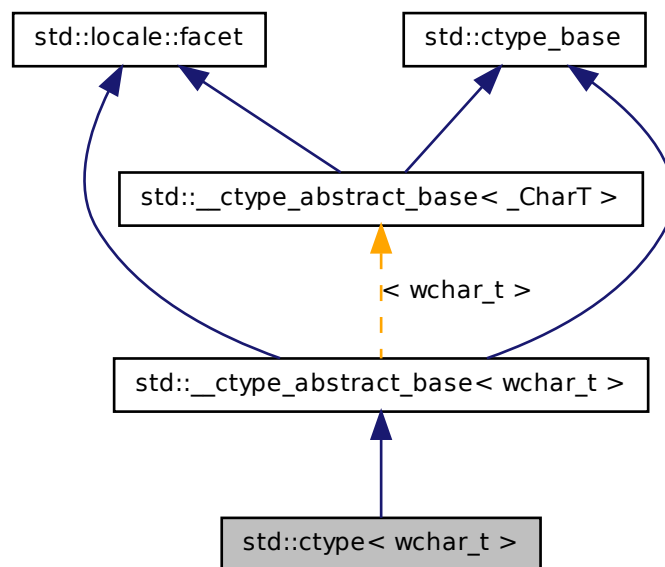

- [locale_facets.h](#)
- [ctype_inline.h](#)

5.424 std::ctype< wchar_t > Class Template Reference

The [ctype<wchar_t>](#) specialization.

This class defines classification and conversion functions for the wchar_t type. It gets used by wchar_t streams for many I/O operations. The wchar_t specialization provides a number of optimizations as well.

5.424.1 Detailed Description

`template<> class std::ctype< wchar_t >`

The [ctype<wchar_t>](#) specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well. [ctype<wchar_t>](#) inherits its public methods from [__ctype_abstract_base<wchar_t>](#).

Definition at line 1174 of file `locale_facets.h`.

5.424.2 Member Typedef Documentation

5.424.2.1 `typedef wchar_t std::ctype< wchar_t >::char_type`

Typedef for the template parameter `wchar_t`.

Reimplemented from [std::__ctype_abstract_base< wchar_t >](#).

Definition at line 1179 of file `locale_facets.h`.

5.424.3 Constructor & Destructor Documentation

5.424.3.1 std::ctype< wchar_t >::ctype (size_t __refs = 0) [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

refs Passed to the base facet class.

5.424.3.2 std::ctype< wchar_t >::ctype (__c_locale __cloc, size_t __refs = 0) [explicit]

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

Parameters

cloc Handle to C locale data.

refs Passed to the base facet class.

5.424.3.3 virtual std::ctype< wchar_t >::~~ctype () [protected, virtual]

Destructor.

5.424.4 Member Function Documentation

5.424.4.1 virtual bool std::ctype< wchar_t >::do_is (mask __m, char_type __c) const [protected, virtual]

Test wchar_t classification.

This function finds a mask *M* for *c* and compares it to mask *m*.

[do_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do_is\(\)](#) must always return the same result for the same input.

Parameters

c The wchar_t to find the mask of.

m The mask to compare against.

Returns

$(M \& m) \neq 0$.

5.424.4.2 `virtual bool std::__ctype_abstract_base< wchar_t >::do_is (mask
__m, char_type __c) const [protected, pure virtual,
inherited]`

Test char_type classification.

This function finds a mask M for c and compares it to mask m .

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

c The char_type to find the mask of.

m The mask to compare against.

Returns

$(M \& m) \neq 0$.

5.424.4.3 `virtual const char_type* std::ctype< wchar_t >::do_is (const
char_type * __lo, const char_type * __hi, mask * __vec) const
[protected, virtual]`

Return a mask array.

This function finds the mask for each `wchar_t` in the range $[lo, hi)$ and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi .

5.424.4.4 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_is(const char_type * __lo, const char_type * __hi, mask * __vec) const` `[protected, pure virtual, inherited]`

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

vec Pointer to an array of mask storage.

Returns

hi.

5.424.4.5 `virtual char std::__ctype_abstract_base< wchar_t >::do_narrow(char_type, char __dfault) const` `[protected, pure virtual, inherited]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The `char_type` to convert.

dfault Char to return if conversion fails.

Returns

The converted `char`.

5.424.4.6 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, pure virtual, inherited]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *dfault* is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

5.424.4.7 `virtual char std::ctype< wchar_t >::do_narrow (char_type, char __dfault) const [protected, virtual]`

Narrow `wchar_t` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<wchar_t>` facet, *c* will be cast to `char` and returned.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The `wchar_t` to convert.
- dfault* Char to return if conversion fails.

Returns

The converted `char`.

5.424.4.8 `virtual const char_type* std::ctype< wchar_t >::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, virtual]`

Narrow wchar_t array to char array.

This virtual function converts each wchar_t in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any wchar_t in the input that cannot be converted, *dfault* is used instead. For an undervived `ctype<wchar_t>` facet, the argument will be copied, casting each element to char.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

5.424.4.9 `virtual const char_type* std::ctype< wchar_t >::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find wchar_t matching mask.

This function searches for and returns the first wchar_t c in [lo,hi) for which `is(m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

Returns

Pointer to a matching wchar_t if found, else *hi*.

5.424.4.10 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [protected, pure virtual, inherited]`

Find char_type matching mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *hi*.

5.424.4.11 `virtual const char_type* std::ctype< wchar_t >::do_scan_not (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual]`

Find wchar_t not matching mask.

This function searches for and returns a pointer to the first wchar_t c of [lo,hi) for which is(m,c) is false.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do_is\(\)](#) must always return the same result for the same input.

Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

Returns

Pointer to a non-matching wchar_t if found, else *hi*.

5.424.4.12 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_scan_not(mask __m, const char_type * __lo, const char_type * __hi) const [protected, pure virtual, inherited]`

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *hi*.

5.424.4.13 `virtual char_type std::ctype< wchar_t >::do_tolower(char_type) const [protected, virtual]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

c The wchar_t to convert.

Returns

The lowercase wchar_t if convertible, else *c*.

5.424.4.14 `virtual char_type std::__ctype_abstract_base< wchar_t >::do_tolower(char_type) const [protected, pure virtual, inherited]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The lowercase `char_type` if convertible, else *c*.

5.424.4.15 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_tolower (char_type * __lo, const char_type * __hi) const [protected, pure virtual, inherited]`

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.424.4.16 `virtual const char_type* std::ctype< wchar_t >::do_tolower (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each `wchar_t` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

[`do_tolower\(\)`](#) is a hook for a derived facet to change the behavior of lowercasing. [`do_tolower\(\)`](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.424.4.17 `virtual char_type std::__ctype_abstract_base< wchar_t
>::do_toupper (char_type) const [protected, pure
virtual, inherited]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

5.424.4.18 `virtual char_type std::ctype< wchar_t >::do_toupper (char_type
) const [protected, virtual]`

Convert to uppercase.

This virtual function converts the `wchar_t` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

c The `wchar_t` to convert.

Returns

The uppercase `wchar_t` if convertible, else *c*.

5.424.4.19 `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, pure virtual, inherited]`

Convert array to uppercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.424.4.20 `virtual const char_type* std::ctype< wchar_t >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual]`

Convert array to uppercase.

This virtual function converts each `wchar_t` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

[`do_toupper\(\)`](#) is a hook for a derived facet to change the behavior of uppercasing. [`do_toupper\(\)`](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.424.4.21 `virtual char_type std::ctype< wchar_t >::do_widen (char) const [protected, virtual]`

Widen `char` to `wchar_t`.

This virtual function converts the char to wchar_t using the simplest reasonable transformation. For an underived [ctype<wchar_t>](#) facet, the argument will be cast to wchar_t.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted wchar_t.

Implements [std::__ctype_abstract_base< wchar_t >](#).

5.424.4.22 `virtual const char* std::ctype< wchar_t >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [protected, virtual]`

Widen char array to wchar_t array.

This function converts each char in the input to wchar_t using the simplest reasonable transformation. For an underived [ctype<wchar_t>](#) facet, the argument will be copied, casting each element to wchar_t.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

5.424.4.23 `virtual const char* std::__ctype_abstract_base< wchar_t >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [protected, pure virtual, inherited]`

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

lo Pointer to start range.
hi Pointer to end of range.
to Pointer to the destination array.

Returns

hi.

5.424.4.24 `const char_type* std::__ctype_abstract_base< wchar_t >::is (const char_type * __lo, const char_type * __hi, mask * __vec) const [inline, inherited]`

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

lo Pointer to start of range.
hi Pointer to end of range.
vec Pointer to an array of mask storage.

Returns

hi.

Definition at line 178 of file locale_facets.h.

5.424.4.25 `bool std::__ctype_abstract_base< wchar_t >::is (mask __m, char_type __c) const [inline, inherited]`

Test char_type classification.

This function finds a mask M for c and compares it to mask m. It does so by returning the value of ctype<char_type>::do_is().

Parameters

- c* The char_type to compare the mask of.
m The mask to compare against.

Returns

(M & m) != 0.

Definition at line 161 of file locale_facets.h.

5.424.4.26 `const char_type* std::__ctype_abstract_base< wchar_t >::narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __to) const [inline, inherited]`

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(lo, hi, dfault, to).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

- lo* Pointer to start of range.
hi Pointer to end of range.
dfault Char to use if conversion fails.
to Pointer to the destination array.

Returns

hi.

Definition at line 345 of file locale_facets.h.

5.424.4.27 `char std::__ctype_abstract_base< wchar_t >::narrow (char_type __c, char __dfault) const [inline, inherited]`

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. It does so by returning ctype<char_type>::do_narrow(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

c The char_type to convert.
dfault Char to return if conversion fails.

Returns

The converted char.

Definition at line 323 of file locale_facets.h.

5.424.4.28 `const char_type* std::__ctype_abstract_base< wchar_t >::scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [inline, inherited]`

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

m The mask to compare against.
lo Pointer to start of range.
hi Pointer to end of range.

Returns

Pointer to matching char_type if found, else *hi*.

Definition at line 194 of file locale_facets.h.

5.424.4.29 `const char_type* std::__ctype_abstract_base< wchar_t >::scan_not (mask __m, const char_type * __lo, const char_type * __hi) const [inline, inherited]`

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

m The mask to compare against.
lo Pointer to first char in range.
hi Pointer to end of range.

Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale_facets.h.

5.424.4.30 `const char_type* std::__ctype_abstract_base< wchar_t >::tolower (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert array to lowercase.

This function converts each char_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>::do_toupper(lo, hi).

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 268 of file locale_facets.h.

5.424.4.31 `char_type std::__ctype_abstract_base< wchar_t >::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

c The char_type to convert.

Returns

The lowercase char_type if convertible, else *c*.

Definition at line 253 of file locale_facets.h.

5.424.4.32 `const char_type* std::__ctype_abstract_base< wchar_t >::toupper (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert array to uppercase.

This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 239 of file `locale_facets.h`.

5.424.4.33 `char_type std::__ctype_abstract_base< wchar_t >::toupper (char_type __c) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

Definition at line 224 of file `locale_facets.h`.

5.424.4.34 `char_type std::__ctype_abstract_base< wchar_t >::widen (char __c) const [inline, inherited]`

Widen `char` to `char_type`.

This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted char_type.

Definition at line 285 of file locale_facets.h.

5.424.4.35 `const char* std::__ctype_abstract_base< wchar_t >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecv for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 304 of file locale_facets.h.

5.424.5 Member Data Documentation

5.424.5.1 `locale::id std::ctype< wchar_t >::id [static]`

The facet id for [ctype<wchar_t>](#)

Definition at line 1197 of file locale_facets.h.

5.426.1 Detailed Description

template<typename _CharT> class std::ctype_byname<_CharT>

class [ctype_byname](#) [22.2.1.2].

Definition at line 1466 of file locale_facets.h.

5.426.2 Member Typedef Documentation

5.426.2.1 **template<typename _CharT> typedef _CharT std::ctype<_CharT>::char_type [inherited]**

Typedef for the template parameter.

Reimplemented from [std::__ctype_abstract_base<_CharT>](#).

Definition at line 608 of file locale_facets.h.

5.426.3 Member Function Documentation

5.426.3.1 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const [protected, virtual, inherited]`

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do_is\(\)](#) must always return the same result for the same input.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

Returns

hi.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.2 `template<typename _CharT> virtual bool std::ctype<_CharT>::do_is (mask __m, char_type __c) const [protected, virtual, inherited]`

Test char_type classification.

This function finds a mask M for *c* and compares it to mask *m*.

[do_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do_is\(\)](#) must always return the same result for the same input.

Parameters

- c* The char_type to find the mask of.
- m* The mask to compare against.

Returns

(M & m) != 0.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.3 `template<typename _CharT> virtual char std::ctype< _CharT >::do_narrow (char_type, char __dfault) const [protected, virtual, inherited]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

Returns

The converted `char`.

Implements `std::__ctype_abstract_base< _CharT >`.

5.426.3.4 `template<typename _CharT> virtual const char_type* std::ctype< _CharT >::do_narrow (const char_type * __lo, const char_type * __hi, char __dfault, char * __dest) const [protected, virtual, inherited]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.5 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_is (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Find char_type matching mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do_is\(\)](#) must always return the same result for the same input.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *hi*.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.6 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_not (mask __m, const char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

[do_scan_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do_is\(\)](#) must always return the same result for the same input.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *hi*.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.7 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_tolower(char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert array to lowercase.

This virtual function converts each char_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.8 `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_tolower(char_type) const [protected, virtual, inherited]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

c The char_type to convert.

Returns

The lowercase `char_type` if convertible, else `c`.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.426.3.9 `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_toupper(char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert array to uppercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.426.3.10 `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_toupper(char_type) const [protected, virtual, inherited]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[do_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else `c`.

Implements [std::__ctype_abstract_base< _CharT >](#).

5.426.3.11 `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_widen (char) const [protected, virtual, inherited]`

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted char_type

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.12 `template<typename _CharT> virtual const char* std::ctype<_CharT>::do_widen (const char * __lo, const char * __hi, char_type * __dest) const [protected, virtual, inherited]`

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Implements [std::__ctype_abstract_base<_CharT>](#).

5.426.3.13 `template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is (mask __m, char_type __c) const [inline, inherited]`

Test char_type classification.

This function finds a mask *M* for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

- c* The char_type to compare the mask of.
- m* The mask to compare against.

Returns

(*M* & *m*) != 0.

Definition at line 161 of file locale_facets.h.

Referenced by `std::regex_traits<_Ch_type>::isctype()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.426.3.14 `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::is (const char_type * __lo, const char_type * __hi, mask * __vec) const [inline, inherited]`

Return a mask array.

This function finds the mask for each char_type in the range [*lo*,*hi*) and successively writes it to *vec*. *vec* must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

Returns

hi.

Definition at line 178 of file locale_facets.h.

5.426.3.15 `template<typename _CharT> char std::__ctype_abstract_base<_CharT>::narrow (char_type __c, char __dfault) const
[inline, inherited]`

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

- c* The char_type to convert.
- dfault* Char to return if conversion fails.

Returns

The converted char.

Definition at line 323 of file locale_facets.h.

Referenced by std::time_put< _CharT, _OutIter >::put().

5.426.3.16 `template<typename _CharT> const char_type*
std::__ctype_abstract_base< _CharT >::narrow (const char_type
* __lo, const char_type * __hi, char __dfault, char * __to) const
[inline, inherited]`

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, dfault is used instead. It does so by returning ctype<char_type>::do_narrow(lo, hi, dfault, to).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Definition at line 345 of file locale_facets.h.

```
5.426.3.17  template<typename _CharT> const char_type*
             std::__ctype_abstract_base<_CharT>::scan_is ( mask __m,
             const char_type * __lo, const char_type * __hi ) const  [inline,
             inherited]
```

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning [ctype<char_type>::do_scan_is\(\)](#).

Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

Returns

Pointer to matching char_type if found, else *hi*.

Definition at line 194 of file locale_facets.h.

```
5.426.3.18  template<typename _CharT> const char_type*
             std::__ctype_abstract_base<_CharT>::scan_not ( mask __m,
             const char_type * __lo, const char_type * __hi ) const  [inline,
             inherited]
```

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning [ctype<char_type>::do_scan_not\(\)](#).

Parameters

- m* The mask to compare against.
- lo* Pointer to first char in range.
- hi* Pointer to end of range.

Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 210 of file locale_facets.h.

5.426.3.19 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::tolower (char_type *
__lo, const char_type * __hi) const [inline, inherited]`

Convert array to lowercase.

This function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 268 of file `locale_facets.h`.

5.426.3.20 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

Parameters

c The `char_type` to convert.

Returns

The lowercase `char_type` if convertible, else *c*.

Definition at line 253 of file `locale_facets.h`.

5.426.3.21 `template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::toupper (char_type *
__lo, const char_type * __hi) const [inline, inherited]`

Convert array to uppercase.

This function converts each `char_type` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

Definition at line 239 of file `locale_facets.h`.

5.426.3.22 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper (char_type __c) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

Parameters

c The `char_type` to convert.

Returns

The uppercase `char_type` if convertible, else *c*.

Definition at line 224 of file `locale_facets.h`.

5.426.3.23 `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen (char __c) const [inline, inherited]`

Widen `char` to `char_type`.

This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted char_type.

Definition at line 285 of file locale_facets.h.

Referenced by std::money_get<_CharT, _InIter>::do_get(), std::time_put<_CharT, _OutIter>::do_put(), std::money_put<_CharT, _OutIter>::do_put(), std::regex_traits<_Ch_type>::isctype(), and std::operator<<().

5.426.3.24 `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 304 of file locale_facets.h.

5.426.4 Member Data Documentation

5.426.4.1 `template<typename _CharT> locale::id std::ctype<_CharT>::id [static, inherited]`

The facet id for ctype<char_type>

Definition at line 612 of file locale_facets.h.

5.427.1 Detailed Description

`template<> class std::ctype_byname< char >`

22.2.1.4 Class [ctype_byname](#) specializations.

Definition at line 1481 of file `locale_facets.h`.

5.427.2 Member Typedef Documentation

5.427.2.1 `typedef char std::ctype< char >::char_type` [\[inherited\]](#)

Typedef for the template parameter `char`.

Definition at line 678 of file `locale_facets.h`.

5.427.3 Member Function Documentation

5.427.3.1 `static const mask* std::ctype< char >::classic_table () throw ()`
`[static, inherited]`

Returns a pointer to the C locale mask table.

5.427.3.2 `virtual char std::ctype< char >::do_narrow (char_type __c, char`
`)const [inline, protected, virtual, inherited]`

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

dfault Char to return if conversion fails.

Returns

The converted char.

Definition at line 1123 of file `locale_facets.h`.

5.427.3.3 `virtual const char_type* std::ctype< char >::do_narrow (const`
`char_type * __lo, const char_type * __hi, char, char * __dest)`
`const [inline, protected, virtual, inherited]`

Narrow char array to char array.

This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.
hi Pointer to end of range.
dfault Char to use if conversion fails.
to Pointer to the destination array.

Returns

hi.

Definition at line 1149 of file locale_facets.h.

5.427.3.4 `virtual const char_type* std::ctype< char >::do_tolower (char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to first char in range.
hi Pointer to end of range.

Returns

hi.

5.427.3.5 `virtual char_type std::ctype< char >::do_tolower (char_type) const [protected, virtual, inherited]`

Convert to lowercase.

This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The lowercase char if convertible, else *c*.

5.427.3.6 `virtual const char_type* std::ctype< char >::do_toupper (char_type * __lo, const char_type * __hi) const [protected, virtual, inherited]`

Convert array to uppercase.

This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

Returns

hi.

5.427.3.7 `virtual char_type std::ctype< char >::do_toupper (char_type) const [protected, virtual, inherited]`

Convert to uppercase.

This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The uppercase char if convertible, else *c*.

5.427.3.8 **virtual char_type std::ctype< char >::do_widen (char __c) const** [inline, protected, virtual, inherited]

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be returned unchanged.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted character.

Definition at line 1074 of file `locale_facets.h`.

5.427.3.9 **virtual const char* std::ctype< char >::do_widen (const char * __lo, const char * __hi, char_type * __dest) const** [inline, protected, virtual, inherited]

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be copied unchanged.

[do_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to start of range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 1097 of file `locale_facets.h`.

5.427.3.10 `const char * std::ctype< char >::is (const char * __lo, const char * __hi, mask * __vec) const [inline, inherited]`

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

Returns

hi.

Definition at line 46 of file ctype_inline.h.

5.427.3.11 `bool std::ctype< char >::is (mask __m, char __c) const [inline, inherited]`

Test char classification.

This function compares the mask table[c] to *m*.

Parameters

- c* The char to compare the mask of.
- m* The mask to compare against.

Returns

True if *m* & table[c] is true, false otherwise.

Definition at line 41 of file ctype_inline.h.

5.427.3.12 `char std::ctype< char >::narrow (char_type __c, char __dfault) const [inline, inherited]`

Narrow char.

This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- c* The char to convert.
- dfault* Char to return if conversion fails.

Returns

The converted character.

Definition at line 922 of file `locale_facets.h`.

5.427.3.13 `const char_type* std::ctype<char>::narrow (const char_type *
__lo, const char_type * __hi, char __dfault, char * __to) const
[inline, inherited]`

Narrow char array.

This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_narrow(lo, hi, dfault, to)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

Returns

hi.

Definition at line 955 of file `locale_facets.h`.

5.427.3.14 `const char * std::ctype< char >::scan_is (mask __m, const char * __lo, const char * __hi) const [inline, inherited]`

Find char matching a mask.

This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a matching char if found, else *hi*.

Definition at line 55 of file ctype_inline.h.

5.427.3.15 `const char * std::ctype< char >::scan_not (mask __m, const char * __lo, const char * __hi) const [inline, inherited]`

Find char not matching a mask.

This function searches for and returns a pointer to the first char in [lo,hi) for which is(m,char) is false.

Parameters

m The mask to compare against.

lo Pointer to start of range.

hi Pointer to end of range.

Returns

Pointer to a non-matching char if found, else *hi*.

Definition at line 65 of file ctype_inline.h.

5.427.3.16 `const mask* std::ctype< char >::table () const throw () [inline, inherited]`

Returns a pointer to the mask table provided to the constructor, or /// the default from [classic_table\(\)](#) if none was provided.

Definition at line 973 of file locale_facets.h.

5.427.3.17 `char_type std::ctype< char >::tolower (char_type __c) const`
[inline, inherited]

Convert to lowercase.

This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(c)`. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The lowercase char if convertible, else *c*.

Definition at line 827 of file locale_facets.h.

5.427.3.18 `const char_type* std::ctype< char >::tolower (char_type * __lo,`
`const char_type * __hi) const` **[inline, inherited]**

Convert array to lowercase.

This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(lo, hi)`. [do_tolower\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

hi.

Definition at line 844 of file locale_facets.h.

5.427.3.19 `const char_type* std::ctype< char >::toupper (char_type * __lo,`
`const char_type * __hi) const` **[inline, inherited]**

Convert array to uppercase.

This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(lo, hi)`. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

Returns

hi.

Definition at line 811 of file locale_facets.h.

5.427.3.20 char_type std::ctype< char >::toupper (char_type __c) const [inline, inherited]

Convert to uppercase.

This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns `ctype<char>::do_toupper(c)`. [do_toupper\(\)](#) must always return the same result for the same input.

Parameters

c The char to convert.

Returns

The uppercase char if convertible, else *c*.

Definition at line 794 of file locale_facets.h.

5.427.3.21 char_type std::ctype< char >::widen (char __c) const [inline, inherited]

Widen char.

This function converts the char to char_type using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. [do_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

c The char to convert.

Returns

The converted character.

Definition at line 864 of file locale_facets.h.

5.427.3.22 `const char* std::ctype< char >::widen (const char * __lo, const char * __hi, char_type * __to) const [inline, inherited]`

Widen char array.

This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

lo Pointer to first char in range.

hi Pointer to end of range.

to Pointer to the destination array.

Returns

hi.

Definition at line 891 of file locale_facets.h.

5.427.4 Member Data Documentation

5.427.4.1 `locale::id std::ctype< char >::id [static, inherited]`

The facet id for `ctype<char>`

Definition at line 695 of file locale_facets.h.

5.427.4.2 `const size_t std::ctype< char >::table_size [static, inherited]`

The size of the mask table. It is `SCHAR_MAX + 1`.

Definition at line 697 of file `locale_facets.h`.

5.435.1 Detailed Description

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class
std::deque<_Tp, _Alloc>
```

A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#).

In previous HP/SGI versions of deque, there was an extra template parameter so users could control the node size. This extension turned out to violate the C++ standard (it can be detected using template template parameters), and it was removed.

Here's how a deque<Tp> manages memory. Each deque has 4 members:

- Tp** _M_map
- size_t _M_map_size
- iterator _M_start, _M_finish

map_size is at least 8. map is an array of map_size pointers-to-. (The name map has nothing to do with the [std::map](#) class, and **nodes** should not be confused with [std::list](#)'s usage of *node*.)

A *node* has no specific type name as such, but it is referred to as *node* in this file. It is a simple array-of-Tp. If Tp is very large, there will be one Tp element per node (i.e., an *array* of one). For non-huge Tp's, node size is inversely related to Tp size: the larger the Tp, the fewer Tp's will fit in a node. The goal here is to keep the total size of a node relatively small and constant over different Tp's, to improve allocator efficiency.

Not every pointer in the map array will point to a node. If the initial number of elements in the deque is small, the /middle/ map pointers will be valid, and the ones at the edges will be unused. This same situation will arise as the map grows: available map pointers, if any, will be on the ends. As new nodes are created, only a subset of the map's pointers need to be copied *outward*.

Class invariants:

- For any nonsingular iterator i:
 - i.node points to a member of the map array. (Yes, you read that correctly: i.node does not actually point to a node.) The member of the map array is what actually points to the node.
 - i.first == *(i.node) (This points to the node (first Tp element).)
 - i.last == i.first + node_size

- i.cur is a pointer in the range [i.first, i.last). NOTE: the implication of this is that i.cur is always a dereferenceable pointer, even if i is a past-the-end iterator.
- Start and Finish are always nonsingular iterators. NOTE: this means that an empty deque must have one node, a deque with <N elements (where N is the node buffer size) must have one node, a deque with N through (2N-1) elements must have two nodes, etc.
- For every node other than start.node and finish.node, every element in the node is an initialized object. If start.node == finish.node, then [start.cur, finish.cur) are initialized objects, and the elements outside that range are uninitialized storage. Otherwise, [start.cur, start.last) and [finish.first, finish.cur) are initialized objects, and [start.first, start.cur) and [finish.cur, finish.last) are uninitialized storage.
- [map, map + map_size) is a valid, non-empty range.
- [start.node, finish.node] is a valid range contained within [map, map + map_size).
- A pointer in the range [map, map + map_size) points to an allocated node if and only if the pointer is in the range [start.node, finish.node].

Here's the magic: nothing in deque is **aware** of the discontinuous storage!

The memory setup and layout occurs in the parent, _Base, and the iterator class is entirely responsible for *leaping* from one node to the next. All the implementation routines for deque itself work only through the start and finish iterators. This keeps the routines simple and sane, and we can use other standard algorithms as well.

5.435.2 Constructor & Destructor Documentation

5.435.2.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque () [inline]`

Default constructor creates no elements.

Definition at line 769 of file stl_deque.h.

5.435.2.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (const allocator_type & __a)
[inline, explicit]`

Creates a deque with no elements.

Parameters

a An allocator object.

Definition at line 777 of file `stl_deque.h`.

5.435.2.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (size_type __n) [inline,
explicit]`

Creates a deque with default constructed elements.

Parameters

n The number of elements to initially create.

This constructor fills the deque with *n* default constructed elements.

Definition at line 789 of file `stl_deque.h`.

5.435.2.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (size_type __n, const value_type
& __value, const allocator_type & __a = allocator_type())
[inline]`

Creates a deque with copies of an exemplar element.

Parameters

n The number of elements to initially create.

value An element to copy.

a An allocator.

This constructor fills the deque with *n* copies of *value*.

Definition at line 801 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_fill_initialize()`.

5.435.2.5 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (const deque<_Tp, _Alloc> &
__x) [inline]`

Deque copy constructor.

Parameters

x A deque of identical element and allocator types.

The newly-created deque uses a copy of the allocation object used by *x*.

Definition at line 828 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::end().

5.435.2.6 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (deque< _Tp, _Alloc > && __x
) [inline]`

Deque move constructor.

Parameters

x A deque of identical element and allocator types.

The newly-created deque contains the exact contents of *x*. The contents of *x* are a valid, but unspecified deque.

Definition at line 842 of file stl_deque.h.

5.435.2.7 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (initializer_list< value_type
> __l, const allocator_type & __a = allocator_type())
[inline]`

Builds a deque from an initializer list.

Parameters

l An [initializer_list](#).

a An allocator object.

Create a deque consisting of copies of the elements in the [initializer_list](#) *l*.

This will call the element type's copy constructor *N* times (where *N* is *l.size()*) and do no memory reallocation.

Definition at line 856 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::M_range_initialize().

```

5.435.2.8  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
            template<typename _InputIterator > std::deque< _Tp, _Alloc
            >::deque ( _InputIterator __first, _InputIterator __last, const
            allocator_type & __a = allocator_type() ) [inline]

```

Builds a deque from a range.

Parameters

first An input iterator.

last An input iterator.

a An allocator object.

Create a deque consisting of copies of the elements from [first, last).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor N times (where N is distance(first,last)) and do no memory reallocation. But if only input iterators are used, then this will do at most 2N calls to the copy constructor, and logN memory reallocations.

Definition at line 881 of file stl_deque.h.

```

5.435.2.9  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
            std::deque< _Tp, _Alloc >::~~deque ( ) [inline]

```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 895 of file stl_deque.h.

References `std::deque< _Tp, _Alloc >::begin()`, and `std::deque< _Tp, _Alloc >::end()`.

5.435.3 Member Function Documentation

```

5.435.3.1  template<typename _Tp , typename _Alloc > void
            deque::_M_fill_initialize ( const value_type & __value )
            [protected]

```

Fills the deque with copies of value.

Parameters

value Initial value.

Returns

Nothing.

Precondition

_M_start and _M_finish have already been initialized, but none of the deque's elements have yet been constructed.

This function is called only when the user provides an explicit size (with or without an explicit exemplar value).

Definition at line 331 of file deque.tcc.

References std::_Destroy().

Referenced by std::deque< _Tp, _Alloc >::deque().

5.435.3.2 `template<typename _Tp , typename _Alloc > void
std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (size_t
__num_elements) [protected, inherited]`

Layout storage.

Parameters

num_elements The count of T's for which to allocate space at first.

Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 572 of file stl_deque.h.

References std::max().

Referenced by std::deque< _Tp, _Alloc >::_M_range_initialize().

5.435.3.3 `template<typename _Tp , typename _Alloc > void
deque::_M_new_elements_at_back (size_type __new_elements)
[protected]`

Memory-handling helpers for the previous internal insert functions.

Definition at line 825 of file deque.tcc.

Helper functions for `push_*` and `pop_*`.

Definition at line 449 of file deque.tcc.

Referenced by std::deque< _Tp, _Alloc >::push_front().

5.435.3.9 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::_M_range_check (size_type __n)
const [inline, protected]`

Safety check used only from [at\(\)](#).

Definition at line 1235 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::size().

Referenced by std::deque< _Tp, _Alloc >::at().

5.435.3.10 `template<typename _Tp , typename _Alloc > template<typename
_InputIterator > void deque::_M_range_initialize (_InputIterator
__first, _InputIterator __last, std::input_iterator_tag)
[protected]`

Fills the deque with whatever is in [first,last).

Parameters

first An input iterator.

last An input iterator.

Returns

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using push_back on each value from the iterator.

Definition at line 357 of file deque.tcc.

References std::_Deque_base< _Tp, _Alloc >::_M_initialize_map(), std::deque< _Tp, _Alloc >::clear(), and std::deque< _Tp, _Alloc >::push_back().

void std::deque< _Tp, _Alloc >::_M_reserve_map_at_front (
size_type __nodes_to_add = 1) [inline, protected]`

Memory-handling helpers for the major map.

Makes sure the _M_map has space for new nodes. Does not actually add the nodes. Can invalidate _M_map pointers. (And consequently, deque iterators.)

Definition at line 1890 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_reallocate_map().

Referenced by std::deque< _Tp, _Alloc >::_M_new_elements_at_front().

5.435.3.17 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::assign (size_type __n, const
value_type & __val) [inline]`

Assigns a given value to a deque.

Parameters

n Number of elements to be assigned.

val Value to be assigned.

This function fills a deque with *n* copies of the given value. Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 956 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc>::operator=()`.

```
5.435.3.18  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
               template<typename _InputIterator > void std::deque<_Tp, _Alloc
               >::assign ( _InputIterator __first, _InputIterator __last )
               [inline]
```

Assigns a range to a deque.

Parameters

first An input iterator.

last An input iterator.

This function fills a deque with copies of the elements in the range `[first,last)`.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 973 of file `stl_deque.h`.

```
5.435.3.19  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
               void std::deque<_Tp, _Alloc>::assign ( initializer_list<
               value_type > __l ) [inline]
```

Assigns an initializer list to a deque.

Parameters

l An [initializer_list](#).

This function fills a deque with copies of the elements in the [initializer_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 992 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::assign()`.

Referenced by `std::deque<_Tp, _Alloc>::assign()`.

```
5.435.3.20  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
               reference std::deque<_Tp, _Alloc>::at ( size_type __n )
               [inline]
```

Provides access to the data contained in the deque.

Parameters

n The index of the element for which data should be accessed.

Returns

Read/write reference to data.

Exceptions

std::out_of_range If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws *out_of_range* if the check fails.

Definition at line 1254 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_range_check().

```
5.435.3.21  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
               const_reference std::deque< _Tp, _Alloc >::at ( size_type __n )
               const [inline]
```

Provides access to the data contained in the deque.

Parameters

n The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

Exceptions

std::out_of_range If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws *out_of_range* if the check fails.

Definition at line 1272 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_range_check().

```
5.435.3.22  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
               const_reference std::deque< _Tp, _Alloc >::back ( ) const
               [inline]
```

Returns a read-only (constant) reference to the data at the last element of the deque.

Definition at line 1311 of file stl_deque.h.

References `std::deque< _Tp, _Alloc >::end()`.

5.435.3.23 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::deque< _Tp, _Alloc >::back () [inline]`

Returns a read/write reference to the data at the last element of the deque.

Definition at line 1299 of file stl_deque.h.

References `std::deque< _Tp, _Alloc >::end()`.

5.435.3.24 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::deque< _Tp, _Alloc >::begin () [inline]`

Returns a read/write iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1007 of file stl_deque.h.

Referenced by `std::deque< _Tp, _Alloc >::clear()`, `std::deque< _Tp, _Alloc >::deque()`, `std::deque< _Tp, _Alloc >::erase()`, `std::deque< _Tp, _Alloc >::front()`, `std::deque< _Tp, _Alloc >::operator=()`, `std::operator==()`, and `std::deque< _Tp, _Alloc >::~~deque()`.

5.435.3.25 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::deque< _Tp, _Alloc >::begin () const
[inline]`

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1015 of file stl_deque.h.

5.435.3.26 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::deque< _Tp, _Alloc >::cbegin () const
[inline]`

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1078 of file stl_deque.h.

5.435.3.27 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::deque< _Tp, _Alloc >::cend () const
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1087 of file stl_deque.h.

5.435.3.28 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::clear () [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1577 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::begin().

Referenced by std::deque< _Tp, _Alloc >::_M_range_initialize(), std::deque< _Tp, _Alloc >::erase(), and std::deque< _Tp, _Alloc >::operator=().

5.435.3.29 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::deque< _Tp, _Alloc >::crbegin ()
const [inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1096 of file stl_deque.h.

5.435.3.30 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::deque< _Tp, _Alloc >::crend () const
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1105 of file stl_deque.h.

5.435.3.31 `template<typename _Tp, typename _Alloc > template<typename...
_Args> deque< _Tp, _Alloc >::iterator deque::emplace (iterator
__position, _Args &&... __args)`

Inserts an object in deque before specified iterator.

Parameters

position An iterator into the deque.

args Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...) before the specified location.`

Definition at line 172 of file `deque.tcc`.

References `std::deque<_Tp, _Alloc >::push_back()`, and `std::deque<_Tp, _Alloc >::push_front()`.

Referenced by `std::deque<_Tp, _Alloc >::insert()`.

5.435.3.32 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
bool std::deque<_Tp, _Alloc >::empty () const [inline]`

Returns true if the deque is empty. (Thus `begin()` would equal `end()`.)

Definition at line 1198 of file `stl_deque.h`.

5.435.3.33 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::deque<_Tp, _Alloc >::end () [inline]`

Returns a read/write iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1024 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc >::back()`, `std::deque<_Tp, _Alloc >::deque()`, `std::deque<_Tp, _Alloc >::erase()`, `std::deque<_Tp, _Alloc >::operator=()`, `std::operator==()`, and `std::deque<_Tp, _Alloc >::~~deque()`.

5.435.3.34 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::deque<_Tp, _Alloc >::end () const
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1033 of file `stl_deque.h`.

5.435.3.35 `template<typename _Tp , typename _Alloc > deque< _Tp, _Alloc >::iterator deque::erase (iterator __position)`

Remove element at given position.

Parameters

position Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the deque by one.

The user is cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 194 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::begin()`, `std::deque< _Tp, _Alloc >::end()`, `std::deque< _Tp, _Alloc >::pop_back()`, `std::deque< _Tp, _Alloc >::pop_front()`, and `std::deque< _Tp, _Alloc >::size()`.

5.435.3.36 `template<typename _Tp , typename _Alloc > deque< _Tp, _Alloc >::iterator deque::erase (iterator __first, iterator __last)`

Remove a range of elements.

Parameters

first Iterator pointing to the first element to be erased.

last Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range `[first,last)` and shorten the deque accordingly.

The user is cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 217 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::begin()`, `std::deque< _Tp, _Alloc >::clear()`, `std::deque< _Tp, _Alloc >::end()`, and `std::deque< _Tp, _Alloc >::size()`.

5.435.3.37 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::deque<_Tp, _Alloc>::front () [inline]`

Returns a read/write reference to the data at the first element of the deque.

Definition at line 1283 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`.

5.435.3.38 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::deque<_Tp, _Alloc>::front () const
[inline]`

Returns a read-only (constant) reference to the data at the first element of the deque.

Definition at line 1291 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`.

5.435.3.39 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
allocator_type std::deque<_Tp, _Alloc>::get_allocator () const
[inline]`

Get a copy of the memory allocation object.

Reimplemented from `std::_Deque_base<_Tp, _Alloc>`.

Definition at line 998 of file `stl_deque.h`.

5.435.3.40 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > void std::deque<_Tp,
_Alloc>::insert (iterator __position, _InputIterator __first,
_InputIterator __last) [inline]`

Inserts a range into the deque.

Parameters

position An iterator into the deque.

first An input iterator.

last An input iterator.

This function will insert copies of the data in the range `[first,last)` into the deque before the location specified by *pos*. This is known as *range insert*.

Definition at line 1504 of file `stl_deque.h`.

5.435.3.41 `template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc >::iterator deque::insert (iterator __position, const value_type & __x)`

Inserts given value into deque before specified iterator.

Parameters

position An iterator into the deque.

x Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location.

Definition at line 149 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::push_back()`, and `std::deque< _Tp, _Alloc >::push_front()`.

Referenced by `std::deque< _Tp, _Alloc >::operator=()`, and `std::deque< _Tp, _Alloc >::resize()`.

5.435.3.42 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::deque< _Tp, _Alloc >::insert (iterator __p, initializer_list< value_type > __l) [inline]`

Inserts an initializer list into the deque.

Parameters

p An iterator into the deque.

l An [initializer_list](#).

This function will insert copies of the data in the [initializer_list](#) *l* into the deque before the location specified by *p*. This is known as *list insert*.

Definition at line 1475 of file stl_deque.h.

References `std::deque< _Tp, _Alloc >::insert()`.

Referenced by `std::deque< _Tp, _Alloc >::insert()`.

5.435.3.43 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::deque< _Tp, _Alloc >::insert (iterator __position, value_type && __x) [inline]`

Inserts given rvalue into deque before specified iterator.

Parameters

position An iterator into the deque.
x Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location.

Definition at line 1462 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::emplace().

```
5.435.3.44  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
             void std::deque< _Tp, _Alloc >::insert ( iterator __position,
             size_type __n, const value_type & __x ) [inline]
```

Inserts a number of copies of given data into the deque.

Parameters

position An iterator into the deque.
n Number of elements to be inserted.
x Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Definition at line 1489 of file stl_deque.h.

```
5.435.3.45  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
             size_type std::deque< _Tp, _Alloc >::max_size ( ) const
             [inline]
```

Returns the [size\(\)](#) of the largest possible deque.

Definition at line 1117 of file stl_deque.h.

Referenced by std::deque< _Tp, _Alloc >::M_new_elements_at_back(), and std::deque< _Tp, _Alloc >::M_new_elements_at_front().

```
5.435.3.46  template<typename _Tp , typename _Alloc > deque< _Tp, _Alloc
             > & deque::operator= ( const deque< _Tp, _Alloc > & __x )
```

Deque assignment operator.

Parameters

x A deque of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 93 of file deque.tcc.

References std::deque< _Tp, _Alloc >::begin(), std::deque< _Tp, _Alloc >::end(), std::deque< _Tp, _Alloc >::insert(), and std::deque< _Tp, _Alloc >::size().

5.435.3.47 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
deque& std::deque< _Tp, _Alloc >::operator= (initializer_list<
value_type > __l) [inline]`

Assigns an initializer list to a deque.

Parameters

l An [initializer_list](#).

This function fills a deque with copies of the elements in the [initializer_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 938 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::assign().

5.435.3.48 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
deque& std::deque< _Tp, _Alloc >::operator= (deque< _Tp,
_Alloc > && __x) [inline]`

Deque move assignment operator.

Parameters

x A deque of identical element and allocator types.

The contents of *x* are moved into this deque (without copying). *x* is a valid, but unspecified deque.

Definition at line 917 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::clear(), and std::deque< _Tp, _Alloc >::swap().

5.435.3.49 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::deque<_Tp, _Alloc>::operator[] (size_type __n)
[inline]`

Subscript access to the data contained in the deque.

Parameters

n The index of the element for which data should be accessed.

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out_of_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1214 of file `std_deque.h`.

5.435.3.50 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::deque<_Tp, _Alloc>::operator[] (size_type
__n) const [inline]`

Subscript access to the data contained in the deque.

Parameters

n The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out_of_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1229 of file `std_deque.h`.

5.435.3.51 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque<_Tp, _Alloc>::pop_back () [inline]`

Removes last element.

This is a typical stack operation. It shrinks the deque by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before [pop_back\(\)](#) is called.

Definition at line 1412 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_pop_back_aux().

Referenced by std::deque< _Tp, _Alloc >::erase().

5.435.3.52 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::pop_front () [inline]`

Removes first element.

This is a typical stack operation. It shrinks the deque by one.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before [pop_front\(\)](#) is called.

Definition at line 1391 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_pop_front_aux().

Referenced by std::deque< _Tp, _Alloc >::erase().

5.435.3.53 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::push_back (const value_type &
__x) [inline]`

Add data to the end of the deque.

Parameters

x Data to be added.

This is a typical stack operation. The function creates an element at the end of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1360 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::_M_push_back_aux().

Referenced by std::deque< _Tp, _Alloc >::_M_range_initialize(), std::deque< _Tp, _Alloc >::emplace(), and std::deque< _Tp, _Alloc >::insert().

5.435.3.54 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::push_front (const value_type &
__x) [inline]`

Add data to the front of the deque.

Parameters

x Data to be added.

This is a typical stack operation. The function creates an element at the front of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1329 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_push_front_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::emplace()`, and `std::deque< _Tp, _Alloc >::insert()`.

5.435.3.55 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::deque< _Tp, _Alloc >::rbegin () const
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1051 of file `stl_deque.h`.

5.435.3.56 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reverse_iterator std::deque< _Tp, _Alloc >::rbegin ()
[inline]`

Returns a read/write reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1042 of file `stl_deque.h`.

5.435.3.57 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reverse_iterator std::deque< _Tp, _Alloc >::rend () [inline]`

Returns a read/write reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1060 of file `stl_deque.h`.

5.435.3.58 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::deque< _Tp, _Alloc >::rend () const
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1069 of file stl_deque.h.

```
5.435.3.59  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
             void std::deque< _Tp, _Alloc >::resize ( size_type __new_size )
             [inline]
```

Resizes the deque to the specified number of elements.

Parameters

new_size Number of elements the deque should contain.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise default constructed elements are appended.

Definition at line 1131 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::size().

```
5.435.3.60  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
             void std::deque< _Tp, _Alloc >::resize ( size_type __new_size,
             const value_type & __x ) [inline]
```

Resizes the deque to the specified number of elements.

Parameters

new_size Number of elements the deque should contain.

x Data with which new elements should be populated.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise the deque is extended and new elements are populated with given data.

Definition at line 1153 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::insert(), and std::deque< _Tp, _Alloc >::size().

```
5.435.3.61  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
             void std::deque< _Tp, _Alloc >::shrink_to_fit ( ) [inline]
```

A non-binding request to reduce memory use.

Definition at line 1189 of file stl_deque.h.

5.435.3.62 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
size_type std::deque<_Tp, _Alloc>::size () const [inline]`

Returns the number of elements in the deque.

Definition at line 1112 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc>::_M_new_elements_at_back()`, `std::deque<_Tp, _Alloc>::_M_new_elements_at_front()`, `std::deque<_Tp, _Alloc>::_M_range_check()`, `std::deque<_Tp, _Alloc>::erase()`, `std::deque<_Tp, _Alloc>::operator=()`, `std::operator==()`, and `std::deque<_Tp, _Alloc>::resize()`.

5.435.3.63 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::deque<_Tp, _Alloc>::swap (deque<_Tp, _Alloc> &
__x) [inline]`

Swaps data with another deque.

Parameters

x A deque of the same element and allocator types.

This exchanges the elements between two deques in constant time. (Four pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(d1,d2)` will feed to this function.

Definition at line 1557 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc>::operator=()`, and `std::swap()`.

5.436.1 Detailed Description

```
template<typename _RandomNumberEngine, size_t __p, size_t __r> class
std::discard_block_engine< _RandomNumberEngine, __p, __r >
```

Produces random numbers from some base engine by discarding blocks of data.

0 <= __r <= __p

Definition at line 787 of file random.h.

5.436.2 Member Typedef Documentation

5.436.2.1 `template<typename _RandomNumberEngine, size_t __p, size_t __r> typedef _RandomNumberEngine::result_type std::discard_block_engine< _RandomNumberEngine, __p, __r >::result_type`

The type of the generated random value.

Definition at line 794 of file random.h.

5.436.3 Constructor & Destructor Documentation

5.436.3.1 `template<typename _RandomNumberEngine, size_t __p, size_t __r> std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine () [inline]`

Constructs a default discard_block_engine engine.

The underlying engine is default constructed as well.

Definition at line 805 of file random.h.

5.436.3.2 `template<typename _RandomNumberEngine, size_t __p, size_t __r> std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine (const _RandomNumberEngine & __rne) [inline, explicit]`

Copy constructs a discard_block_engine engine.

Copies an existing base class random number generator.

Parameters

rne An existing (base class) engine object.

Definition at line 815 of file random.h.

5.436.3.3 `template<typename _RandomNumberEngine, size_t __p, size_t
 __r> std::discard_block_engine<_RandomNumberEngine, __p, __r
 >::discard_block_engine (_RandomNumberEngine && __rne)
 [inline, explicit]`

Move constructs a discard_block_engine engine.

Copies an existing base class random number generator.

Parameters

rng An existing (base class) engine object.

Definition at line 825 of file random.h.

5.436.3.4 `template<typename _RandomNumberEngine, size_t __p, size_t
 __r> std::discard_block_engine<_RandomNumberEngine, __p,
 __r>::discard_block_engine (result_type __s) [inline,
 explicit]`

Seed constructs a discard_block_engine engine.

Constructs the underlying generator engine seeded with __s.

Parameters

__s A seed value for the base class engine.

Definition at line 835 of file random.h.

5.436.3.5 `template<typename _RandomNumberEngine, size_t __p,
 size_t __r> template<typename _Sseq, typename = typename
 std::enable_if<!std::is_same<_Sseq, discard_block_engine>::value
 && !std::is_same<_Sseq, _RandomNumberEngine>::value>
 ::type> std::discard_block_engine<_RandomNumberEngine,
 __p, __r>::discard_block_engine (_Sseq & __q) [inline,
 explicit]`

Generator construct a discard_block_engine engine.

Parameters

__q A seed sequence.

Definition at line 848 of file random.h.

5.436.4 Member Function Documentation

5.436.4.1 `template<typename _RandomNumberEngine, size_t __p, size_t __r> const _RandomNumberEngine& std::discard_block_engine<_RandomNumberEngine, __p, __r>::base () const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 892 of file random.h.

5.436.4.2 `template<typename _RandomNumberEngine, size_t __p, size_t __r> void std::discard_block_engine<_RandomNumberEngine, __p, __r>::discard (unsigned long long __z) [inline]`

Discard a sequence of random numbers.

Todo

Look for a faster way to do discard.

Definition at line 919 of file random.h.

5.436.4.3 `template<typename _RandomNumberEngine, size_t __p, size_t __r> result_type std::discard_block_engine<_RandomNumberEngine, __p, __r>::max () const [inline]`

Gets the maximum value in the generated random number range.

Todo

This should be constexpr.

Definition at line 910 of file random.h.

5.436.4.4 `template<typename _RandomNumberEngine, size_t __p, size_t __r> result_type std::discard_block_engine<_RandomNumberEngine, __p, __r>::min () const [inline]`

Gets the minimum value in the generated random number range.

Todo

This should be constexpr.

Definition at line 901 of file random.h.

5.436.4.5 `template<typename _RandomNumberEngine, size_t __p, size_t
__r> discard_block_engine< _RandomNumberEngine, __p, __r
>::result_type std::discard_block_engine< _RandomNumberEngine,
__p, __r >::operator() ()`

Gets the next value in the generated random number sequence.

Definition at line 665 of file random.tcc.

5.436.4.6 `template<typename _RandomNumberEngine, size_t __p, size_t
__r> template<typename _Sseq > void std::discard_block_engine<
_RandomNumberEngine, __p, __r >::seed (_Sseq & __q)
[inline]`

Reseeds the discard_block_engine object with the given seed sequence.

Parameters

`__q` A seed generator function.

Definition at line 881 of file random.h.

5.436.4.7 `template<typename _RandomNumberEngine, size_t __p, size_t __r>
void std::discard_block_engine< _RandomNumberEngine, __p, __r
>::seed (result_type __s) [inline]`

Reseeds the discard_block_engine object with the default seed for the underlying base class generator engine.

Definition at line 868 of file random.h.

5.436.4.8 `template<typename _RandomNumberEngine, size_t __p, size_t __r>
void std::discard_block_engine< _RandomNumberEngine, __p, __r
>::seed () [inline]`

Reseeds the discard_block_engine object with the default seed for the underlying base class generator engine.

Definition at line 857 of file random.h.

5.436.5 Friends And Related Function Documentation

5.436.5.1 `template<typename _RandomNumberEngine, size_t __p,
size_t __r> template<typename _RandomNumberEngine1 ,
size_t __p1, size_t __r1, typename _CharT , typename _Traits
> std::basic_ostream<_CharT, _Traits>& operator<<
(std::basic_ostream< _CharT, _Traits > & , const
std::discard_block_engine< _RandomNumberEngine1, __p1, __r1 >
&) [friend]`

Inserts the current state of a discard_block_engine random number generator engine `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A discard_block_engine random number generator engine.

Returns

The output stream with the state of `__x` inserted or in an error state.

5.436.5.2 `template<typename _RandomNumberEngine, size_t __p,
size_t __r> bool operator==(const discard_block_engine<
_RandomNumberEngine, __p, __r > & __lhs, const
discard_block_engine< _RandomNumberEngine, __p, __r > &
__rhs) [friend]`

Compares two discard_block_engine random number generator objects of the same type for equality.

Parameters

`__lhs` A discard_block_engine random number generator object.

`__rhs` Another discard_block_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 943 of file random.h.

5.436.5.3 `template<typename _RandomNumberEngine, size_t __p, size_t __r> template<typename _RandomNumberEngine1, size_t __p1, size_t __r1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits> &, std::discard_block_engine<_RandomNumberEngine1, __p1, __r1> &) [friend]`

Extracts the current state of a % `subtract_with_carry_engine` random number generator engine `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `discard_block_engine` random number generator engine.

Returns

The input stream with the state of `__x` extracted or in an error state.

5.437.1 Detailed Description

`template<typename _IntType = int> class std::discrete_distribution< _IntType >`

A [discrete_distribution](#) random number distribution. The formula for the discrete probability mass function is

Definition at line 4685 of file random.h.

5.437.2 Member Typedef Documentation

5.437.2.1 `template<typename _IntType = int> typedef _IntType std::discrete_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 4692 of file random.h.

5.437.3 Member Function Documentation

5.437.3.1 `template<typename _IntType = int> result_type
std::discrete_distribution< _IntType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4798 of file random.h.

References std::vector< _Tp, _Alloc >::size().

5.437.3.2 `template<typename _IntType = int> result_type
std::discrete_distribution< _IntType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4791 of file random.h.

5.437.3.3 `template<typename _IntType = int> template<typename
_UniformRandomNumberGenerator > result_type
std::discrete_distribution< _IntType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

Definition at line 4806 of file random.h.

References std::discrete_distribution< _IntType >::operator()(), and std::discrete_distribution< _IntType >::param().

Referenced by std::discrete_distribution< _IntType >::operator()().

5.437.3.4 `template<typename _IntType = int> void std::discrete_distribution<
_IntType >::param (const param_type & __param) [inline]`

Sets the parameter set of the distribution.

Parameters

__param The new parameter set of the distribution.

Definition at line 4784 of file random.h.

5.437.3.5 `template<typename _IntType = int> param_type
std::discrete_distribution< _IntType >::param () const
[inline]`

Returns the parameter set of the distribution.

Definition at line 4776 of file random.h.

Referenced by `std::discrete_distribution< _IntType >::operator()()`, and `std::operator==()`.

5.437.3.6 `template<typename _IntType = int> std::vector<double>
std::discrete_distribution< _IntType >::probabilities () const
[inline]`

Returns the probabilities of the distribution.

Definition at line 4769 of file random.h.

5.437.3.7 `template<typename _IntType = int> void std::discrete_distribution<
_IntType >::reset () [inline]`

Resets the distribution state.

Definition at line 4762 of file random.h.

5.437.4 Friends And Related Function Documentation

5.437.4.1 `template<typename _IntType = int> template<typename _IntType1 ,
typename _CharT , typename _Traits > std::basic_ostream< _CharT,
_Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & ,
const std::discrete_distribution< _IntType1 > &) [friend]`

Inserts a `discrete_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A `discrete_distribution` random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

5.438 `std::discrete_distribution< _IntType >::param_type` Struct Reference 2425

5.437.4.2 `template<typename _IntType = int> template<typename _IntType1 ,
typename _CharT , typename _Traits > std::basic_istream<_CharT,
_Traits>& operator>> (std::basic_istream< _CharT, _Traits > & ,
std::discrete_distribution< _IntType1 > &) [friend]`

Extracts a `discrete_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `discrete_distribution` random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

- `void reset` ()

5.448.1 Detailed Description

`template<typename _RealType = double> class std::exponential_distribution<_RealType>`

An exponential continuous distribution for random numbers. The formula for the exponential probability density function is $p(x|\lambda) = \lambda e^{-\lambda x}$.

Mean	$\frac{1}{\lambda}$
Median	$\frac{\ln 2}{\lambda}$
Mode	<i>zero</i>
Range	$[0, \infty]$
Standard Deviation	$\frac{1}{\lambda^2}$

Table 5.1: Distribution Statistics

Definition at line 4164 of file `random.h`.

5.448.2 Member Typedef Documentation

5.448.2.1 `template<typename _RealType = double> typedef _RealType std::exponential_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 4171 of file `random.h`.

5.448.3 Constructor & Destructor Documentation

5.448.3.1 `template<typename _RealType = double> std::exponential_distribution< _RealType >::exponential_distribution (const result_type & __lambda = result_type (1)) [inline, explicit]`

Constructs an exponential distribution with inverse scale parameter λ .

Definition at line 4202 of file random.h.

5.448.4 Member Function Documentation

5.448.4.1 `template<typename _RealType = double> _RealType std::exponential_distribution< _RealType >::lambda () const [inline]`

Returns the inverse scale parameter of the distribution.

Definition at line 4223 of file random.h.

5.448.4.2 `template<typename _RealType = double> result_type std::exponential_distribution< _RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4252 of file random.h.

5.448.4.3 `template<typename _RealType = double> result_type std::exponential_distribution< _RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4245 of file random.h.

5.448.4.4 `template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::exponential_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

5.452.3 Member Function Documentation

5.452.3.1 `template<typename _RealType = double> result_type
std::fisher_f_distribution<_RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2974 of file random.h.

5.452.3.2 `template<typename _RealType = double> result_type
std::fisher_f_distribution<_RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2967 of file random.h.

5.452.3.3 `template<typename _RealType = double> template<typename
_UniformRandomNumberGenerator > result_type
std::fisher_f_distribution<_RealType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

Definition at line 2982 of file random.h.

5.452.3.4 `template<typename _RealType = double> void
std::fisher_f_distribution<_RealType >::param (const param_type
& __param) [inline]`

Sets the parameter set of the distribution.

Parameters

`__param` The new parameter set of the distribution.

Definition at line 2960 of file random.h.

5.452.3.5 `template<typename _RealType = double> param_type
std::fisher_f_distribution<_RealType >::param () const
[inline]`

Returns the parameter set of the distribution.

Definition at line 2952 of file random.h.

5.452.3.6 `template<typename _RealType = double> void
std::fisher_f_distribution< _RealType >::reset () [inline]`

Resets the distribution state.

Definition at line 2931 of file random.h.

References std::gamma_distribution< _RealType >::reset().

5.452.4 Friends And Related Function Documentation

5.452.4.1 `template<typename _RealType = double> template<typename
_RealType1 , typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits>& operator<<
(std::basic_ostream< _CharT, _Traits > & , const
std::fisher_f_distribution< _RealType1 > &) [friend]`

Inserts a fisher_f_distribution random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A fisher_f_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

5.452.4.2 `template<typename _RealType = double> template<typename
_RealType1 > bool operator==(const std::fisher_f_distribution<
_RealType1 > & __d1, const std::fisher_f_distribution< _RealType1
> & __d2) [friend]`

Return true if two Fisher f distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3003 of file random.h.

5.452.4.3 `template<typename _RealType = double> template<typename
_RealType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>>
(std::basic_istream< _CharT, _Traits > & ,
std::fisher_f_distribution< _RealType1 > &) [friend]`

Extracts a fisher_f_distribution random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A fisher_f_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

5.455.1 Detailed Description

template<typename _Tp, typename _Alloc = allocator<_Tp>> class std::forward_list<_Tp, _Alloc>

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#), a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *singly linked* list. Traversal up the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike [std::vector](#) and [std::deque](#), random-access iterators are not provided, so subscripting (`[]`) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, [std::forward_list](#) provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `forward_list<Tp>`:

First, we never actually allocate a `Tp`, we allocate `Fwd_list_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `forward_list<X, Alloc1>` are spliced into `forward_list<X, Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Definition at line 407 of file `forward_list.h`.

5.455.2 Constructor & Destructor Documentation

5.455.2.1 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (const _Alloc & __al
= _Alloc()) [inline, explicit]`

Creates a forward_list with no elements.

Parameters

al An allocator object.

Definition at line 436 of file forward_list.h.

5.455.2.2 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (const forward_list<
_Tp, _Alloc> & __list, const _Alloc & __al) [inline]`

Copy constructor with allocator argument.

Parameters

list Input list to copy.

al An allocator object.

Definition at line 445 of file forward_list.h.

5.455.2.3 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (forward_list<_Tp,
_Alloc> && __list, const _Alloc & __al) [inline]`

Move constructor with allocator argument.

Parameters

list Input list to move.

al An allocator object.

Definition at line 454 of file forward_list.h.

5.455.2.4 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (size_type __n)
[inline, explicit]`

Creates a forward_list with default constructed elements.

Parameters

n The number of elements to initially create.

This constructor creates the forward_list with *n* default constructed elements.

Definition at line 466 of file forward_list.h.

```
5.455.2.5  template<typename _Tp, typename _Alloc = allocator<_Tp>>
            std::forward_list< _Tp, _Alloc >::forward_list ( size_type __n,
            const _Tp & __value, const _Alloc & __al = _Alloc() )
            [inline]
```

Creates a forward_list with copies of an exemplar element.

Parameters

n The number of elements to initially create.

value An element to copy.

al An allocator object.

This constructor fills the forward_list with *n* copies of *value*.

Definition at line 479 of file forward_list.h.

```
5.455.2.6  template<typename _Tp, typename _Alloc = allocator<_Tp>>
            template<typename _InputIterator > std::forward_list< _Tp, _Alloc
            >::forward_list ( _InputIterator __first, _InputIterator __last,
            const _Alloc & __al = _Alloc() ) [inline]
```

Builds a forward_list from a range.

Parameters

first An input iterator.

last An input iterator.

al An allocator object.

Create a forward_list consisting of copies of the elements from [*first,last*). This is linear in N (where N is distance(*first,last*)).

Definition at line 495 of file forward_list.h.

5.455.2.7 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (const forward_list<
_Tp, _Alloc> & __list) [inline]`

The forward_list copy constructor.

Parameters

list A forward_list of identical element and allocator types.

The newly-created forward_list uses a copy of the allocation object used by *list*.

Definition at line 512 of file forward_list.h.

References std::forward_list<_Tp, _Alloc>::begin(), and std::forward_list<_Tp, _Alloc>::end().

5.455.2.8 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (forward_list<_Tp,
_Alloc> && __list) [inline]`

The forward_list move constructor.

Parameters

list A forward_list of identical element and allocator types.

The newly-created forward_list contains the exact contents of *forward_list*. The contents of *list* are a valid, but unspecified forward_list.

Definition at line 525 of file forward_list.h.

5.455.2.9 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list<_Tp, _Alloc>::forward_list (std::initializer_list<
_Tp> __il, const _Alloc & __al = _Alloc()) [inline]`

Builds a forward_list from an [initializer_list](#).

Parameters

il An [initializer_list](#) of value_type.

al An allocator object.

Create a forward_list consisting of copies of the elements in the [initializer_list](#) *il*. This is linear in il.size().

Definition at line 536 of file forward_list.h.

5.455.2.10 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::~~forward_list () [inline]`

The `forward_list` dtor.

Definition at line 544 of file `forward_list.h`.

5.455.3 Member Function Documentation

5.455.3.1 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
template<typename _InputIterator > void std::forward_list< _Tp,
_Alloc >::assign (_InputIterator __first, _InputIterator __last)
[inline]`

Assigns a range to a `forward_list`.

Parameters

first An input iterator.

last An input iterator.

This function fills a `forward_list` with copies of the elements in the range `[first,last)`.

Note that the assignment completely changes the `forward_list` and that the resulting `forward_list`'s size is the same as the number of elements assigned. Old data may be lost.

Definition at line 606 of file `forward_list.h`.

5.455.3.2 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::assign (size_type __n, const _Tp
& __val) [inline]`

Assigns a given value to a `forward_list`.

Parameters

n Number of elements to be assigned.

val Value to be assigned.

This function fills a `forward_list` with *n* copies of the given value. Note that the assignment completely changes the `forward_list` and that the resulting `forward_list`'s size is the same as the number of elements assigned. Old data may be lost.

Definition at line 623 of file `forward_list.h`.

5.455.3.3 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list<_Tp, _Alloc>::assign (std::initializer_list<_Tp
> __il) [inline]`

Assigns an [initializer_list](#) to a `forward_list`.

Parameters

il An [initializer_list](#) of `value_type`.

Replace the contents of the `forward_list` with copies of the elements in the [initializer_list](#) *il*. This is linear in `il.size()`.

Definition at line 638 of file `forward_list.h`.

5.455.3.4 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list<_Tp, _Alloc>::before_begin ()
[inline]`

Returns a read/write iterator that points before the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 656 of file `forward_list.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::operator=()`, and `std::forward_list<_Tp, _Alloc>::resize()`.

5.455.3.5 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list<_Tp, _Alloc>::before_begin ()
const [inline]`

Returns a read-only (constant) iterator that points before the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 665 of file `forward_list.h`.

5.455.3.6 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list<_Tp, _Alloc>::begin () [inline]`

Returns a read/write iterator that points to the first element in the `forward_list`. Iteration is done in ordinary element order.

Definition at line 673 of file `forward_list.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::forward_list()`, `std::forward_list<_Tp, _Alloc>::operator=()`, and `std::forward_list<_Tp, _Alloc>::unique()`.

5.455.3.7 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::begin () const
[inline]`

Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 682 of file forward_list.h.

5.455.3.8 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::cbefore_begin ()
const [inline]`

Returns a read-only (constant) iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 718 of file forward_list.h.

5.455.3.9 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::cbegin () const
[inline]`

Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 709 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

5.455.3.10 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::cend () const
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 727 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

5.455.3.11 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::clear () [inline]`

Erases all the elements.

Note that this function only erases the elements, and that if the elements themselves

are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1016 of file forward_list.h.

```
5.455.3.12  template<typename _Tp, typename _Alloc = allocator<_Tp>>
               template<typename... _Args> iterator std::forward_list<_Tp,
               _Alloc>::emplace_after( const_iterator __pos, _Args &&...
               __args ) [inline]
```

Constructs object in forward_list after the specified iterator.

Parameters

pos A const_iterator into the forward_list.

args Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 840 of file forward_list.h.

```
5.455.3.13  template<typename _Tp, typename _Alloc = allocator<_Tp>>
               template<typename... _Args> void std::forward_list<_Tp, _Alloc
               >::emplace_front( _Args &&... __args ) [inline]
```

Constructs object in forward_list at the front of the list.

Parameters

args Arguments.

This function will insert an object of type Tp constructed with Tp(std::forward<Args>(args)...) at the front of the list. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 784 of file forward_list.h.

5.455.3.14 `template<typename _Tp, typename _Alloc = allocator<_Tp>> bool
std::forward_list< _Tp, _Alloc >::empty () const [inline]`

Returns true if the forward_list is empty. (Thus `begin()` would equal `end()`.)

Definition at line 735 of file forward_list.h.

Referenced by `std::forward_list< _Tp, _Alloc >::insert_after()`.

5.455.3.15 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::end () [inline]`

Returns a read/write iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 691 of file forward_list.h.

Referenced by `std::forward_list< _Tp, _Alloc >::forward_list()`, `std::forward_list< _Tp, _Alloc >::operator=()`, `std::forward_list< _Tp, _Alloc >::resize()`, and `std::forward_list< _Tp, _Alloc >::unique()`.

5.455.3.16 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::end () const
[inline]`

Returns a read-only iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 700 of file forward_list.h.

5.455.3.17 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::erase_after (const_iterator
__pos, const_iterator __last) [inline]`

Remove a range of elements.

Parameters

pos Iterator pointing before the first element to be erased.

last Iterator pointing to one past the last element to be erased.

This function will erase the elements in the range (pos,last) and shorten the forward_list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only

erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 960 of file forward_list.h.

5.455.3.18 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list<_Tp, _Alloc>::erase_after (const_iterator
__pos) [inline]`

Removes the element pointed to by the iterator following `pos`.

Parameters

pos Iterator pointing before element to be erased.

This function will erase the element at the given position and thus shorten the forward_list by one.

Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 939 of file forward_list.h.

Referenced by `std::forward_list<_Tp, _Alloc>::operator=()`, `std::forward_list<_Tp, _Alloc>::resize()`, and `std::forward_list<_Tp, _Alloc>::unique()`.

5.455.3.19 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
reference std::forward_list<_Tp, _Alloc>::front () [inline]`

Returns a read/write reference to the data at the first element of the forward_list.

Definition at line 752 of file forward_list.h.

5.455.3.20 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
const_reference std::forward_list<_Tp, _Alloc>::front () const
[inline]`

Returns a read-only (constant) reference to the data at the first element of the forward_list.

Definition at line 763 of file forward_list.h.

5.455.3.21 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
allocator_type std::forward_list< _Tp, _Alloc >::get_allocator ()
const [inline]`

Get a copy of the memory allocation object.

Definition at line 646 of file forward_list.h.

5.455.3.22 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::insert_after (
const_iterator __pos, const _Tp & __val) [inline]`

Inserts given value into forward_list after specified iterator.

Parameters

pos An iterator into the forward_list.

val Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 857 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::operator=(), and std::forward_list< _Tp, _Alloc >::resize().

5.455.3.23 `template<typename _Tp, typename _Alloc > forward_list< _Tp,
_Alloc >::iterator std::forward_list< _Tp, _Alloc >::insert_after (
const_iterator __pos, size_type __n, const _Tp & __val)`

Inserts a number of copies of given data into the forward_list.

Parameters

pos An iterator into the forward_list.

n Number of elements to be inserted.

val Data to be inserted.

Returns

An iterator pointing to the last inserted copy of *val* or *pos* if *n* == 0.

This function will insert a specified number of copies of the given data after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 244 of file forward_list.tcc.

5.455.3.24 `template<typename _Tp, typename _Alloc > template<typename
_InputIterator > forward_list< _Tp, _Alloc >::iterator
std::forward_list< _Tp, _Alloc >::insert_after (const_iterator
__pos, _InputIterator __first, _InputIterator __last)`

Inserts a range into the forward_list.

Parameters

position An iterator into the forward_list.

first An input iterator.

last An input iterator.

Returns

An iterator pointing to the last inserted element or *pos* if *first* == *last*.

This function will insert copies of the data in the range [*first*,*last*) into the forward_list after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 259 of file forward_list.tcc.

References std::forward_list< _Tp, _Alloc >::empty().

5.455.3.25 `template<typename _Tp, typename _Alloc > forward_list< _Tp,
_Alloc >::iterator std::forward_list< _Tp, _Alloc >::insert_after (
const_iterator __pos, std::initializer_list< _Tp > __il)`

Inserts the contents of an [initializer_list](#) into forward_list after the specified iterator.

Parameters

pos An iterator into the forward_list.

il An [initializer_list](#) of value_type.

Returns

An iterator pointing to the last inserted element or *pos* if *il* is empty.

This function will insert copies of the data in the [initializer_list](#) *il* into the `forward_list` before the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 272 of file `forward_list.tcc`.

5.455.3.26 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
size_type std::forward_list< _Tp, _Alloc >::max_size () const
[inline]`

Returns the largest possible size of `forward_list`.

Definition at line 742 of file `forward_list.h`.

5.455.3.27 `template<typename _Tp , typename _Alloc > template<typename
_Comp > void std::forward_list< _Tp, _Alloc >::merge (
forward_list< _Tp, _Alloc > && __list, _Comp __comp)`

Merge sorted lists according to comparison function.

Parameters

list Sorted list to merge.

comp Comparison function defining sort order.

Assumes that both *list* and this list are sorted according to *comp*. Merges elements of *list* into this list in sorted order, leaving *list* empty when complete. Elements in this list precede elements in *list* that are equivalent according to *comp*().

Definition at line 352 of file `forward_list.tcc`.

5.455.3.28 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::merge (forward_list< _Tp,
_Alloc > && __list) [inline]`

Merge sorted lists.

Parameters

list Sorted list to merge.

Assumes that both *list* and this list are sorted according to operator<(). Merges elements of *list* into this list in sorted order, leaving *list* empty when complete. Elements in this list precede elements in *list* that are equal.

Definition at line 1147 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::merge().

Referenced by std::forward_list< _Tp, _Alloc >::merge().

5.455.3.29 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
forward_list& std::forward_list< _Tp, _Alloc >::operator= (
forward_list< _Tp, _Alloc > && __list) [inline]`

The forward_list move assignment operator.

Parameters

list A forward_list of identical element and allocator types.

The contents of *list* are moved into this forward_list (without copying). *list* is a valid, but unspecified forward_list

Definition at line 568 of file forward_list.h.

5.455.3.30 `template<typename _Tp, typename _Alloc > forward_list< _Tp,
_Alloc > & std::forward_list< _Tp, _Alloc >::operator= (const
forward_list< _Tp, _Alloc > & __list)`

The forward_list assignment operator.

Parameters

list A forward_list of identical element and allocator types.

All the elements of *list* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 140 of file forward_list.tcc.

References std::forward_list< _Tp, _Alloc >::before_begin(), std::forward_list< _Tp, _Alloc >::begin(), std::forward_list< _Tp, _Alloc >::cbegin(), std::forward_list< _Tp, _Alloc >::cend(), std::forward_list< _Tp, _Alloc >::end(), std::forward_list< _Tp, _Alloc >::erase_after(), and std::forward_list< _Tp, _Alloc >::insert_after().

5.455.3.31 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
forward_list& std::forward_list< _Tp, _Alloc >::operator= (
std::initializer_list< _Tp > __il) [inline]`

The forward_list initializer list assignment operator.

Parameters

il An [initializer_list](#) of value_type.

Replace the contents of the forward_list with copies of the elements in the [initializer_list](#) *il*. This is linear in *il.size()*.

Definition at line 586 of file forward_list.h.

5.455.3.32 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::pop_front () [inline]`

Removes first element.

This is a typical stack operation. It shrinks the forward_list by one. Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before [pop_front\(\)](#) is called.

Definition at line 822 of file forward_list.h.

5.455.3.33 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::push_front (const _Tp & __val
) [inline]`

Add data to the front of the forward_list.

Parameters

val Data to be added.

This is a typical stack operation. The function creates an element at the front of the forward_list and assigns the given data to it. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 799 of file forward_list.h.

5.455.3.34 `template<typename _Tp, typename _Alloc > void
std::forward_list< _Tp, _Alloc >::remove (const _Tp & __val)`

Remove all elements equal to value.

Parameters

val The value to remove.

Removes every element in the list equal to *value*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 286 of file forward_list.tcc.

5.455.3.35 `template<typename _Tp, typename _Alloc> template<typename
_Pred> void std::forward_list< _Tp, _Alloc>::remove_if (_Pred
__pred)`

Remove all elements satisfying a predicate.

Parameters

pred Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 315 of file forward_list.tcc.

5.455.3.36 `template<typename _Tp, typename _Alloc> void
std::forward_list< _Tp, _Alloc>::resize (size_type __sz)`

Resizes the forward_list to the specified number of elements.

Parameters

sz Number of elements the forward_list should contain.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current size the forward_list is truncated, otherwise the forward_list is extended and the new elements are default constructed.

Definition at line 185 of file forward_list.tcc.

References `std::forward_list< _Tp, _Alloc>::before_begin()`, `std::forward_list< _Tp, _Alloc>::end()`, and `std::forward_list< _Tp, _Alloc>::erase_after()`.

5.455.3.37 `template<typename _Tp, typename _Alloc> void
std::forward_list< _Tp, _Alloc>::resize (size_type __sz, const
value_type & __val)`

Resizes the forward_list to the specified number of elements.

Parameters

sz Number of elements the forward_list should contain.

val Data with which new elements should be populated.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current size the forward_list is truncated, otherwise the forward_list is extended and new elements are populated with given data.

Definition at line 204 of file forward_list.tcc.

References std::forward_list< _Tp, _Alloc >::before_begin(), std::forward_list< _Tp, _Alloc >::end(), std::forward_list< _Tp, _Alloc >::erase_after(), and std::forward_list< _Tp, _Alloc >::insert_after().

5.455.3.38 **template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::reverse () [inline]**

Reverse the elements in list.

Reverse the order of elements in the list in linear time.

Definition at line 1191 of file forward_list.h.

5.455.3.39 **template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::sort () [inline]**

Sort the elements of the list.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 1172 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::sort().

Referenced by std::forward_list< _Tp, _Alloc >::sort().

5.455.3.40 **template<typename _Tp, class _Alloc > template<typename _Comp > void std::forward_list< _Tp, _Alloc >::sort (_Comp __comp)**

Sort the [forward_list](#) using a comparison function.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 398 of file forward_list.tcc.

5.455.3.41 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::splice_after (const_iterator
__pos, forward_list< _Tp, _Alloc > && __list) [inline]`

Insert contents of another forward_list.

Parameters

pos Iterator referencing the element to insert after.

list Source list.

The elements of *list* are inserted in constant time after the element referenced by *pos*.
list becomes an empty list.

Requires this != *x*.

Definition at line 1033 of file forward_list.h.

5.455.3.42 `template<typename _Tp , typename _Alloc > void
std::forward_list< _Tp, _Alloc >::splice_after (const_iterator
__pos, forward_list< _Tp, _Alloc > && __list, const_iterator
__before, const_iterator __last)`

Insert range from another forward_list.

Parameters

pos Iterator referencing the element to insert after.

list Source list.

before Iterator referencing before the start of range in list.

last Iterator referencing the end of range in list.

Removes elements in the range (before,last) and inserts them after *pos* in constant time.

Undefined if *pos* is in (before,last).

Definition at line 233 of file forward_list.tcc.

5.455.3.43 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::splice_after (const_iterator
__pos, forward_list< _Tp, _Alloc > && __list, const_iterator __i
) [inline]`

Insert element from another forward_list.

Parameters

pos Iterator referencing the element to insert after.

list Source list.

i Iterator referencing the element before the element to move.

Removes the element in list *list* referenced by *i* and inserts it into the current list after *pos*.

Definition at line 1050 of file forward_list.h.

5.455.3.44 `template<typename _Tp, typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::swap (forward_list< _Tp,
_Alloc > & __list) [inline]`

Swaps data with another forward_list.

Parameters

list A forward_list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global [std::swap\(\)](#) function is specialized such that `std::swap(l1,l2)` will feed to this function.

Definition at line 975 of file forward_list.h.

Referenced by `std::swap()`.

5.455.3.45 `template<typename _Tp, typename _Alloc = allocator<_Tp>> void
std::forward_list< _Tp, _Alloc >::unique () [inline]`

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1118 of file forward_list.h.

References `std::forward_list< _Tp, _Alloc >::unique()`.

Referenced by `std::forward_list< _Tp, _Alloc >::unique()`.

5.455.3.46 `template<typename _Tp , typename _Alloc > template<typename
_BinPred > void std::forward_list< _Tp, _Alloc >::unique (
_BinPred __binary_pred)`

Remove consecutive elements satisfying a predicate.

Parameters

binary_pred Binary predicate function or object.

For each consecutive set of elements [first,last) that satisfy predicate(first,i) where i is an iterator in [first,last), remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 331 of file forward_list.tcc.

References `std::forward_list< _Tp, _Alloc >::begin()`, `std::forward_list< _Tp, _Alloc >::end()`, and `std::forward_list< _Tp, _Alloc >::erase_after()`.

5.456 `std::fpos< _StateT >` Class Template Reference

Class representing stream positions.

Public Member Functions

- [fpos](#) (streamoff __off)
- [operator streamoff](#) () const
- [fpos operator+](#) (streamoff __off) const
- [fpos & operator+=](#) (streamoff __off)
- [fpos operator-](#) (streamoff __off) const
- [streamoff operator-](#) (const [fpos](#) &__other) const
- [fpos & operator-=](#) (streamoff __off)
- void [state](#) (_StateT __st)
- _StateT [state](#) () const

5.456.1 Detailed Description

`template<typename _StateT> class std::fpos< _StateT >`

Class representing stream positions. The standard places no requirements upon the template parameter StateT. In this implementation StateT must be DefaultConstructible, CopyConstructible and Assignable. The standard only requires that fpos should contain a member of type StateT. In this implementation it also contains an offset stored as a signed integer.

Parameters

StateT Type passed to and returned from [state\(\)](#).

Definition at line 112 of file postypes.h.

5.456.2 Constructor & Destructor Documentation

5.456.2.1 `template<typename _StateT> std::fpos< _StateT >::fpos (streamoff __off) [inline]`

Construct position from offset.

Definition at line 133 of file postypes.h.

5.456.3 Member Function Documentation

5.456.3.1 `template<typename _StateT> std::fpos< _StateT >::operator streamoff () const [inline]`

Convert to streamoff.

Definition at line 137 of file postypes.h.

5.456.3.2 `template<typename _StateT> fpos std::fpos< _StateT >::operator+ (streamoff __off) const [inline]`

Add position and offset.

Definition at line 178 of file postypes.h.

5.456.3.3 `template<typename _StateT> fpos& std::fpos< _StateT >::operator+=(streamoff __off) [inline]`

Add offset to this position.

Definition at line 154 of file postypes.h.

5.456.3.4 `template<typename _StateT> streamoff std::fpos< _StateT >::operator- (const fpos< _StateT > & __other) const [inline]`

Subtract position to return offset.

Definition at line 205 of file postypes.h.

5.456.3.5 `template<typename _StateT> fpos std::fpos< _StateT >::operator- (streamoff __off) const [inline]`

Subtract offset from position.

Definition at line 192 of file postypes.h.

5.456.3.6 `template<typename _StateT> fpos& std::fpos< _StateT >::operator-= (streamoff __off) [inline]`

Subtract offset from this position.

Definition at line 165 of file postypes.h.

5.456.3.7 `template<typename _StateT> _StateT std::fpos< _StateT >::state () const [inline]`

Return the last set value of *st*.

Definition at line 146 of file postypes.h.

5.456.3.8 `template<typename _StateT> void std::fpos< _StateT >::state (_StateT __st) [inline]`

Remember the value of *st*.

Definition at line 141 of file postypes.h.

5.457 `std::front_insert_iterator< _Container >` Class Template Reference

Turns assignment into insertion.

Inheritance diagram for `std::front_insert_iterator<_Container>`:

Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

Public Member Functions

- `front_insert_iterator` (`_Container &__x`)
- `front_insert_iterator` & `operator*` ()
- `front_insert_iterator` & `operator++` ()
- `front_insert_iterator` `operator++` (int)
- `front_insert_iterator` & `operator=` (const typename `_Container::value_type` &__value)
- `front_insert_iterator` & `operator=` (typename `_Container::value_type` &&__value)

Protected Attributes

- `_Container * container`

5.457.1 Detailed Description

template<typename _Container> class std::front_insert_iterator<_Container >

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator prepends it to the container using push_front.

Tip: Using the front_inserter function to create these iterators can save typing.

Definition at line 485 of file stl_iterator.h.

5.457.2 Member Typedef Documentation

**5.457.2.1 template<typename _Container > typedef _Container
std::front_insert_iterator<_Container >::container_type**

A nested typedef for the type of whatever container you used.

Definition at line 493 of file stl_iterator.h.

**5.457.2.2 typedef void std::iterator< output_iterator_tag , void , void , void ,
void >::difference_type [inherited]**

Distance between iterators is represented as this type.

Definition at line 124 of file stl_iterator_base_types.h.

**5.457.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void
, void , void , void >::iterator_category [inherited]**

One of the [tag types](#).

Definition at line 120 of file stl_iterator_base_types.h.

**5.457.2.4 typedef void std::iterator< output_iterator_tag , void , void , void ,
void >::pointer [inherited]**

This type represents a pointer-to-value_type.

Definition at line 126 of file stl_iterator_base_types.h.

5.457.2.5 `typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference [inherited]`

This type represents a reference-to-value_type.

Definition at line 128 of file stl_iterator_base_types.h.

5.457.2.6 `typedef void std::iterator< output_iterator_tag, void, void, void, void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 122 of file stl_iterator_base_types.h.

5.457.3 Constructor & Destructor Documentation

5.457.3.1 `template<typename _Container > std::front_insert_iterator< _Container >::front_insert_iterator (_Container & __x) [inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 496 of file stl_iterator.h.

5.457.4 Member Function Documentation

5.457.4.1 `template<typename _Container > front_insert_iterator& std::front_insert_iterator< _Container >::operator* () [inline]`

Simply returns *this.

Definition at line 534 of file stl_iterator.h.

5.457.4.2 `template<typename _Container > front_insert_iterator std::front_insert_iterator< _Container >::operator++ (int) [inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 544 of file stl_iterator.h.

5.457.4.3 `template<typename _Container > front_insert_iterator&
std::front_insert_iterator< _Container >::operator++ ()
[inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 539 of file stl_iterator.h.

5.457.4.4 `template<typename _Container > front_insert_iterator&
std::front_insert_iterator< _Container >::operator= (const
typename _Container::value_type & __value) [inline]`

Parameters

value An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the front, if you like). Assigning a value to the iterator will always prepend the value to the front of the container.

Definition at line 518 of file stl_iterator.h.

5.458.1 Detailed Description

template<typename _Res, typename... _ArgTypes> class std::function< _Res(_ArgTypes...)>

Primary class template for std::function.

Polymorphic function wrapper.

Definition at line 1859 of file functional.

5.458.2 Constructor & Destructor Documentation

5.458.2.1 `template<typename _Res , typename... _ArgTypes> std::function<
_Res(_ArgTypes...)>::function () [inline]`

Default construct creates an empty function call wrapper.

Postcondition

`!(bool)*this`

Definition at line 1876 of file functional.

5.458.2.2 `template<typename _Res , typename... _ArgTypes> std::function<
_Res(_ArgTypes...)>::function (nullptr_t) [inline]`

Creates an empty function call wrapper.

Postcondition

`!(bool)*this`

Definition at line 1882 of file functional.

5.458.2.3 `template<typename _Res , typename... _ArgTypes>
std::function< _Res(_ArgTypes...)>::function (const function<
_Res(_ArgTypes...)> & __x)`

Function copy constructor.

Parameters

x A function object with identical call signature.

Postcondition

`(bool)*this == (bool)x`

The newly-created function contains a copy of the target of *x* (if it has one).

Definition at line 2113 of file functional.

5.458.2.4 `template<typename _Res , typename... _ArgTypes> std::function<
_Res(_ArgTypes...)>::function (function< _Res(_ArgTypes...)> &&
__x) [inline]`

Function move constructor.

Parameters

x A function object rvalue with identical call signature.

The newly-created function contains the target of *x* (if it has one).

Definition at line 1901 of file functional.

```
5.458.2.5 template<typename _Res , typename... _ArgTypes>
            template<typename _Function > std::function<
              _Res(_ArgTypes...)>::function ( _Function __f, typename enable_if<
                !is_integral< _Function >::value, _Useless >::type = _Useless() )
```

Builds a function that targets a copy of the incoming function object.

Parameters

f A function object that is callable with parameters of type T1, T2, ..., TN and returns a value convertible to *Res*.

The newly-created function object will target a copy of *f*. If *f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If *f* is a NULL function pointer or NULL pointer-to-member, the newly-created object will be empty.

If *f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 2127 of file functional.

5.458.3 Member Function Documentation

```
5.458.3.1 template<typename _Res , typename... _ArgTypes> std::function<
            _Res(_ArgTypes...)>::operator bool ( ) const [inline,
            explicit]
```

Determine if the function wrapper has a target.

Returns

`true` when this function object contains a target, or `false` when it is empty.

This function will not throw an exception.

Definition at line 2056 of file functional.

5.458.3.2 `template<typename _Res , typename... _ArgTypes> _Res
std::function< _Res(_ArgTypes...)>::operator() (_ArgTypes...
__args) const`

Invokes the function targeted by `*this`.

Returns

the result of the target.

Exceptions

bad_function_call when `!(bool)*this`

The function call operator invokes the target function object stored by `this`.

Definition at line 2145 of file functional.

5.458.3.3 `template<typename _Res , typename... _ArgTypes> function&
std::function< _Res(_ArgTypes...)>::operator= (function<
_Res(_ArgTypes...)> && __x) [inline]`

Function move-assignment operator.

Parameters

x A function rvalue with identical call signature.

Returns

`*this`

The target of `x` is moved to `*this`. If `x` has no target, then `*this` will be empty.

If `x` targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1961 of file functional.

5.458.3.4 `template<typename _Res , typename... _ArgTypes>
template<typename _Functor > enable_if<!is_integral<_
_Functor>::value, function&>::type std::function<
_Res(_ArgTypes...)>::operator= (_Functor && __f) [inline]`

Function assignment to a new target.

Parameters

f A function object that is callable with parameters of type T1, T2, ..., TN and returns a value convertible to Res.

Returns

*this

This function object wrapper will target a copy of *f*. If *f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If *f* is a NULL function pointer or NULL pointer-to-member, `this` object will be empty.

If *f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 2004 of file functional.

```
5.458.3.5 template<typename _Res , typename... _ArgTypes>
template<typename _Functor > enable_if<!is_integral<_Functor>::value, function<>::type std::function<
_Res(_ArgTypes...)>::operator= ( reference_wrapper< _Functor >
__f ) [inline]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2013 of file functional.

```
5.458.3.6 template<typename _Res , typename... _ArgTypes> function&
std::function< _Res(_ArgTypes...)>::operator= ( const function<
_Res(_ArgTypes...)> & __x ) [inline]
```

Function assignment operator.

Parameters

x A function with identical call signature.

Postcondition

`(bool)*this == (bool)x`

Returns

*this

The target of *x* is copied to **this*. If *x* has no target, then **this* will be empty.

If *x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1943 of file functional.

```
5.458.3.7  template<typename _Res , typename... _ArgTypes> function&
            std::function< _Res(_ArgTypes...)>::operator= ( nullptr_t )
            [inline]
```

Function assignment to zero.

Postcondition

!(bool)*this

Returns

*this

The target of **this* is deallocated, leaving it empty.

Definition at line 1975 of file functional.

```
5.458.3.8  template<typename _Res , typename... _ArgTypes> void
            std::function< _Res(_ArgTypes...)>::swap ( function<
            _Res(_ArgTypes...)> & __x ) [inline]
```

Swap the targets of two function objects.

Parameters

f A function with identical call signature.

Swap the targets of *this* function object and *f*. This function will not throw an exception.

Definition at line 2028 of file functional.

References std::swap().

```
5.458.3.9  template<typename _Res , typename... _ArgTypes>
            template<typename _Functor > const _Functor * std::function<
            _Res(_ArgTypes...)>::target ( ) const
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2191 of file functional.

5.458.3.10 `template<typename _Res , typename... _ArgTypes>
template<typename _Functor > _Functor * std::function<
_Res(_ArgTypes...)>::target ()`

Access the stored target function object.

Returns

Returns a pointer to the stored target function object, if `typeid(Functor).equals(target_type())`; otherwise, a NULL pointer.

This function will not throw an exception.

Definition at line 2172 of file functional.

5.458.3.11 `template<typename _Res , typename... _ArgTypes> const type_info
& std::function< _Res(_ArgTypes...)>::target_type () const`

Determine the type of the target of this function object wrapper.

Returns

the type identifier of the target function object, or `typeid(void)` if `!(bool)*this`.

This function will not throw an exception.

Definition at line 2156 of file functional.

5.463.1 Detailed Description

`template<typename _RealType = double> class std::gamma_distribution< _RealType >`

A gamma continuous distribution for random numbers. The formula for the gamma probability density function is:

$$p(x|\alpha, \beta) = \frac{1}{\beta\Gamma(\alpha)} (x/\beta)^{\alpha-1} e^{-x/\beta}$$

Definition at line 2353 of file random.h.

5.463.2 Member Typedef Documentation

5.463.2.1 `template<typename _RealType = double> typedef _RealType
std::gamma_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 2360 of file random.h.

5.463.3 Constructor & Destructor Documentation

5.463.3.1 `template<typename _RealType = double> std::gamma_distribution<
_RealType >::gamma_distribution (_RealType __alpha_val
= _RealType(1), _RealType __beta_val = _RealType(1))
[inline, explicit]`

Constructs a gamma distribution with parameters α and β .

Definition at line 2405 of file random.h.

5.463.4 Member Function Documentation

5.463.4.1 `template<typename _RealType = double> _RealType
std::gamma_distribution< _RealType >::alpha () const
[inline]`

Returns the α of the distribution.

Definition at line 2426 of file random.h.

5.463.4.2 `template<typename _RealType = double> _RealType
std::gamma_distribution< _RealType >::beta () const [inline]`

Returns the β of the distribution.

Definition at line 2433 of file random.h.

5.463.4.3 `template<typename _RealType = double> result_type
std::gamma_distribution< _RealType >::max () const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2462 of file random.h.

Referenced by std::gamma_distribution< result_type >::max().

5.463.4.4 `template<typename _RealType = double> result_type
std::gamma_distribution< _RealType >::min () const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2455 of file random.h.

5.463.4.5 `template<typename _RealType = double> template<typename
_UniformRandomNumberGenerator > result_type
std::gamma_distribution< _RealType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]`

Generating functions.

Definition at line 2470 of file random.h.

Referenced by std::gamma_distribution< result_type >::operator()().

5.463.5 Friends And Related Function Documentation

5.463.5.1 `template<typename _RealType = double> template<typename
_RealType1, typename _CharT, typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<<
(std::basic_ostream<_CharT, _Traits> &, const
std::gamma_distribution<_RealType1> &) [friend]`

Inserts a gamma_distribution random number distribution `__x` into the output stream `__os`.

Parameters

`__os` An output stream.

`__x` A gamma_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

5.463.5.2 `template<typename _RealType = double> template<typename
_RealType1 > bool operator==(const std::gamma_distribution<
_RealType1> & __d1, const std::gamma_distribution<_RealType1
> & __d2) [friend]`

Return true if two gamma distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2485 of file random.h.

5.463.5.3 `template<typename _RealType = double> template<typename
_RealType1, typename _CharT, typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>>
(std::basic_istream<_CharT, _Traits> &,
std::gamma_distribution<_RealType1> &) [friend]`

Extracts a gamma_distribution random number distribution `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A gamma_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

- [valarray](#)< size_t > [stride](#) () const

Friends

- class `valarray`

5.469.1 Detailed Description

Class defining multi-dimensional subset of an array. The slice class represents a multi-dimensional subset of an array, specified by three parameter sets: start offset, size array, and stride array. The start offset is the index of the first element of the array that is part of the subset. The size and stride array describe each dimension of the slice. Size is the number of elements in that dimension, and stride is the distance in the array between successive elements in that dimension. Each dimension's size and stride is taken to begin at an array element described by the previous dimension. The size array and stride array must be the same size.

For example, if you have `offset==3`, `stride[0]==11`, `size[1]==3`, `stride[1]==3`, then `slice[0,0]==array[3]`, `slice[0,1]==array[6]`, `slice[0,2]==array[9]`, `slice[1,0]==array[14]`, `slice[1,1]==array[17]`, `slice[1,2]==array[20]`.

Definition at line 63 of file `gslice.h`.

The documentation for this class was generated from the following file:

5.470.1 Detailed Description

`template<typename _Tp> class std::gslice_array< _Tp >`

Reference to multi-dimensional subset of an array. A [gslice_array](#) is a reference to the actual elements of an array specified by a [gslice](#). The way to get a [gslice_array](#) is to call `operator[]`([gslice](#)) on a [valarray](#). The returned [gslice_array](#) then permits carrying operations out on the referenced subset of elements in the original [valarray](#). For example, `operator+=(valarray)` will add values to the subset of elements in the underlying [valarray](#) this [gslice_array](#) refers to.

5.497.1 Detailed Description

template<typename _RandomNumberEngine, size_t __w, typename _UIntType>
class std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>
>

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __w.

Definition at line 1013 of file random.h.

5.497.2 Member Typedef Documentation

5.497.2.1 **template<typename _RandomNumberEngine, size_t __w, typename _UIntType> typedef _UIntType std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType >::result_type**

The type of the generated random value.

Definition at line 1022 of file random.h.

5.497.3 Constructor & Destructor Documentation

5.497.3.1 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> std::independent_bits_engine<_
RandomNumberEngine, __w, _UIntType >::independent_bits_engine
() [inline]`

Constructs a default independent_bits_engine engine.

The underlying engine is default constructed as well.

Definition at line 1029 of file random.h.

5.497.3.2 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> std::independent_bits_engine<_
_RandomNumberEngine, __w, _UIntType >::independent_bits_
engine (const _RandomNumberEngine & __rne) [inline,
explicit]`

Copy constructs a independent_bits_engine engine.

Copies an existing base class random number generator.

Parameters

rne An existing (base class) engine object.

Definition at line 1039 of file random.h.

5.497.3.3 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> std::independent_bits_engine<_
RandomNumberEngine, __w, _UIntType >::independent_bits_engine
(_RandomNumberEngine && __rne) [inline, explicit]`

Move constructs a independent_bits_engine engine.

Copies an existing base class random number generator.

Parameters

rne An existing (base class) engine object.

Definition at line 1049 of file random.h.

5.497.3.4 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> std::independent_bits_engine<_-
RandomNumberEngine, __w, _UIntType >::independent_bits_engine
(result_type __s) [inline, explicit]`

Seed constructs a independent_bits_engine engine.

Constructs the underlying generator engine seeded with __s.

Parameters

__s A seed value for the base class engine.

Definition at line 1059 of file random.h.

5.497.3.5 `template<typename _RandomNumberEngine, size_t
__w, typename _UIntType> template<typename _Sseq ,
typename = typename std::enable_if<!std::is_same<_Sseq,
independent_bits_engine>::value && !std::is_same<_Sseq,
RandomNumberEngine>::value> ::type> std::independent
bits_engine<_RandomNumberEngine, __w, _UIntType
>::independent_bits_engine (_Sseq & __q) [inline,
explicit]`

Generator construct a independent_bits_engine engine.

Parameters

__q A seed sequence.

Definition at line 1072 of file random.h.

5.497.4 Member Function Documentation

5.497.4.1 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> const _RandomNumberEngine&
std::independent_bits_engine<_RandomNumberEngine, __w,
_UIntType >::base () const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 1107 of file random.h.

5.497.4.2 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> void std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::discard (unsigned
long long __z) [inline]`

Discard a sequence of random numbers.

Todo

Look for a faster way to do discard.

Definition at line 1134 of file random.h.

5.497.4.3 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> result_type std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::max () const
[inline]`

Gets the maximum value in the generated random number range.

Todo

This should be constexpr.

Definition at line 1125 of file random.h.

5.497.4.4 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> result_type std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::min () const
[inline]`

Gets the minimum value in the generated random number range.

Todo

This should be constexpr.

Definition at line 1116 of file random.h.

5.497.4.5 `template<typename _RandomNumberEngine , size_t __w, typename
_UIntType > independent_bits_engine< _RandomNumberEngine,
__w, _UIntType >::result_type std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::operator() ()`

Gets the next value in the generated random number sequence.

**5.497 std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType
> Class Template Reference** **2539**

Definition at line 722 of file random.tcc.

References std::log().

5.497.4.6 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> template<typename _Sseq > void
std::independent_bits_engine<_RandomNumberEngine, __w,
_UIntType >::seed (_Sseq & __q) [inline]`

Reseeds the independent_bits_engine object with the given seed sequence.

Parameters

`__q` A seed generator function.

Definition at line 1099 of file random.h.

5.497.4.7 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> void std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::seed (result_type __s
) [inline]`

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1089 of file random.h.

5.497.4.8 `template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> void std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::seed () [inline]`

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1081 of file random.h.

5.497.5 Friends And Related Function Documentation

5.497.5.1 `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> bool operator==(const independent_bits_engine<_RandomNumberEngine, __w, _UIntType> & __lhs, const independent_bits_engine<_RandomNumberEngine, __w, _UIntType> & __rhs) [friend]`

Compares two `independent_bits_engine` random number generator objects of the same type for equality.

Parameters

`__lhs` A `independent_bits_engine` random number generator object.

`__rhs` Another `independent_bits_engine` random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1159 of file `random.h`.

5.497.5.2 `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> & operator>>(std::basic_istream<_CharT, _Traits> & __is, std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType> & __x) [friend]`

Extracts the current state of a `% subtract_with_carry_engine` random number generator engine `__x` from the input stream `__is`.

Parameters

`__is` An input stream.

`__x` A `independent_bits_engine` random number generator engine.

Returns

The input stream with the state of `__x` extracted or in an error state.

Definition at line 1177 of file `random.h`.

Friends

- `class gslice_array< _Tp >`
- `class valarray< _Tp >`

5.498.1 Detailed Description

`template<class _Tp> class std::indirect_array< _Tp >`

Reference to arbitrary subset of an array. An `indirect_array` is a reference to the actual elements of an array specified by an ordered array of indices. The way to get an `indirect_array` is to call `operator[]`(`valarray<size_t>`) on a `valarray`. The returned `indirect_array` then permits carrying operations out on the referenced subset of elements in the original `valarray`.

For example, if an `indirect_array` is obtained using the array (4,2,0) as an argument, and then assigned to an array containing (1,2,3), then the underlying array will have `array[0]==3`, `array[2]==2`, and `array[4]==1`.

Parameters

Tp Element type.

Definition at line 61 of file `indirect_array.h`.

5.498.2 Member Function Documentation

5.498.2.1 `template<class _Tp> void std::indirect_array< _Tp >::operator%= (const valarray< _Tp > &) const`

Modulo slice elements by corresponding elements of *v*.

5.498.2.2 `template<class _Tp> void std::indirect_array< _Tp >::operator&= (const valarray< _Tp > &) const`

Logical and slice elements with corresponding elements of *v*.

5.498.2.3 `template<class _Tp> void std::indirect_array< _Tp >::operator*= (const valarray< _Tp > &) const`

Multiply slice elements by corresponding elements of *v*.

5.498.2.4 `template<class _Tp> void std::indirect_array< _Tp >::operator+= (const valarray< _Tp > &) const`

Add corresponding elements of *v* to slice elements.

5.498.2.5 `template<class _Tp> void std::indirect_array< _Tp >::operator-= (const valarray< _Tp > &) const`

Subtract corresponding elements of *v* from slice elements.

5.498.2.6 `template<class _Tp> void std::indirect_array< _Tp >::operator/= (const valarray< _Tp > &) const`

Divide slice elements by corresponding elements of *v*.

5.498.2.7 `template<class _Tp> void std::indirect_array< _Tp >::operator<<= (const valarray< _Tp > &) const`

Left shift slice elements by corresponding elements of *v*.

5.498.2.8 `template<class _Tp> void std::indirect_array< _Tp >::operator>>= (const valarray< _Tp > &) const`

Right shift slice elements by corresponding elements of *v*.

5.498.2.9 `template<class _Tp> void std::indirect_array< _Tp >::operator^= (const valarray< _Tp > &) const`

Logical xor slice elements with corresponding elements of *v*.

5.498.2.10 `template<class _Tp> void std::indirect_array< _Tp >::operator|= (const valarray< _Tp > &) const`

Logical or slice elements with corresponding elements of *v*.

- `insert_iterator & operator=` (`typename _Container::value_type &&__value`)

Protected Attributes

- `_Container * container`
- `_Container::iterator iter`

5.501.1 Detailed Description

template<typename _Container> class std::insert_iterator< _Container >

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator inserts it in the container at the iterator's position, rather than overwriting the value at that position.

(Sequences will actually insert a *copy* of the value before the iterator's position.)

Tip: Using the inserter function to create these iterators can save typing.

Definition at line 579 of file stl_iterator.h.

5.501.2 Member Typedef Documentation

**5.501.2.1 template<typename _Container> typedef _Container
 std::insert_iterator< _Container >::container_type**

A nested typedef for the type of whatever container you used.

Definition at line 588 of file stl_iterator.h.

**5.501.2.2 typedef void std::iterator< output_iterator_tag , void , void , void ,
 void >::difference_type [inherited]**

Distance between iterators is represented as this type.

Definition at line 124 of file stl_iterator_base_types.h.

**5.501.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void
 , void , void , void >::iterator_category [inherited]**

One of the [tag types](#).

Definition at line 120 of file stl_iterator_base_types.h.

**5.501.2.4 typedef void std::iterator< output_iterator_tag , void , void , void ,
 void >::pointer [inherited]**

This type represents a pointer-to-value_type.

Definition at line 126 of file stl_iterator_base_types.h.

5.501.2.5 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value_type.

Definition at line 128 of file stl_iterator_base_types.h.

5.501.2.6 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 122 of file stl_iterator_base_types.h.

5.501.3 Constructor & Destructor Documentation

5.501.3.1 `template<typename _Container> std::insert_iterator< _Container >::insert_iterator (_Container & __x, typename _Container::iterator __i) [inline]`

The only way to create this iterator is with a container and an initial position (a normal iterator into the container).

Definition at line 594 of file stl_iterator.h.

5.501.4 Member Function Documentation

5.501.4.1 `template<typename _Container> insert_iterator& std::insert_iterator< _Container >::operator* () [inline]`

Simply returns *this.

Definition at line 648 of file stl_iterator.h.

5.501.4.2 `template<typename _Container> insert_iterator& std::insert_iterator< _Container >::operator++ (int) [inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 658 of file stl_iterator.h.

5.501.4.3 `template<typename _Container> insert_iterator&
std::insert_iterator< _Container >::operator++ () [inline]`

Simply returns *this. (This iterator does not *move*.).

Definition at line 653 of file stl_iterator.h.

5.501.4.4 `template<typename _Container> insert_iterator&
std::insert_iterator< _Container >::operator= (const typename
_Container::value_type & __value) [inline]`

Parameters

value An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

Returns

This iterator, for chained operations.

This kind of iterator maintains its own position in the container. Assigning a value to the iterator will insert the value into the container at the place before the iterator.

The position is maintained such that subsequent assignments will insert values immediately after one another. For example,

```
// vector v contains A and Z  
  
insert_iterator i (v, ++v.begin());  
i = 1;  
i = 2;  
i = 3;  
  
// vector v contains A, 1, 2, 3, and Z
```

Definition at line 630 of file stl_iterator.h.

5.503.1 Detailed Description

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).

Definition at line 198 of file `ios_base.h`.

5.503.2 Member Typedef Documentation

5.503.2.1 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`

The type of an event callback function.

Parameters

event One of the members of the event enum.

ios_base Reference to the `ios_base` object.

int The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 435 of file `ios_base.h`.

5.503.2.2 typedef _Ios_Fmtflags std::ios_base::fmtflags

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 254 of file `ios_base.h`.

5.503.2.3 `typedef _Ios_Iostate std::ios_base::iostate`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 329 of file `ios_base.h`.

5.503.2.4 `typedef _Ios_Openmode std::ios_base::openmode`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 360 of file `ios_base.h`.

5.503.2.5 `typedef _Ios_Seekdir std::ios_base::seekdir`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.

- end, equivalent to SEEK_END in the C standard library.

Definition at line 392 of file ios_base.h.

5.503.3 Member Enumeration Documentation

5.503.3.1 enum std::ios_base::event

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 418 of file ios_base.h.

5.503.4 Constructor & Destructor Documentation

5.503.4.1 virtual std::ios_base::~ios_base () [virtual]

Invokes each callback with erase_event. Destroys local storage.

Note that the ios_base object for the standard streams never gets destroyed. As a result, any callbacks registered with the standard streams will not get invoked with erase_event (unless copyfmt is used).

5.503.5 Member Function Documentation

5.503.5.1 const locale& std::ios_base::_M_getloc () const [inline]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 705 of file ios_base.h.

Referenced by std::money_get<_CharT, _InIter>::do_get(), std::num_get<_CharT, _InIter>::do_get(), std::time_get<_CharT, _InIter>::do_get_date(), std::time_get<_CharT, _InIter>::do_get_monthname(), std::time_get<_CharT, _InIter>::do_get_time(), std::time_get<_CharT, _InIter>::do_get_weekday(), std::time_get<_CharT, _InIter>::do_get_year(), std::time_put<_CharT, _OutIter>::do_put(), std::num_put<_CharT, _OutIter>::do_put(), and std::time_put<_CharT, _OutIter>::put().

5.503.5.2 fmtflags std::ios_base::flags () const [inline]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 550 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), and std::operator>>().

5.503.5.3 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline]

Setting new format flags all at once.

Parameters

fmtfl The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 561 of file ios_base.h.

5.503.5.4 locale std::ios_base::getloc () const [inline]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 694 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Traits >::imbue(), std::operator>>(), and std::ws().

5.503.5.5 locale std::ios_base::imbue (const locale & __loc) throw ()

Setting a new locale.

Parameters

loc The new locale.

Returns

The previous locale.

Sets the new locale for this stream, and then invokes each callback with imbue_event.

Reimplemented in [std::basic_ios< _CharT, _Traits >](#), and [std::basic_ios< char, _Traits >](#).

5.503.5.6 long& std::ios_base::iword (int __ix) [inline]

Access to integer array.

Parameters

__ix Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 740 of file ios_base.h.

5.503.5.7 streamsize std::ios_base::precision () const [inline]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 620 of file ios_base.h.

Referenced by std::basic_ios<_CharT, _Traits>::copyfmt(), and std::operator<<().

5.503.5.8 streamsize std::ios_base::precision (streamsize __prec) [inline]

Changing flags.

Parameters

prec The new precision value.

Returns

The previous value of [precision\(\)](#).

Definition at line 629 of file ios_base.h.

5.503.5.9 void*& std::ios_base::pword (int __ix) [inline]

Access to void pointer array.

Parameters

__ix Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 761 of file ios_base.h.

5.503.5.10 void std::ios_base::register_callback (event_callback __fn, int __index)

Add the callback __fn with parameter __index.

Parameters

- __fn* The function to add.
__index The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.503.5.11 fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask)
[inline]**

Setting new format flags.

Parameters

- fmtfl* Additional flags to set.
mask The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 594 of file `ios_base.h`.

5.503.5.12 fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline]

Setting new format flags.

Parameters

- fmtfl* Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 577 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

5.503.5.13 `static bool std::ios_base::sync_with_stdio (bool __sync = true) [static]`

Interaction with the standard C I/O objects.

Parameters

sync Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

5.503.5.14 `void std::ios_base::unsetf (fmtflags __mask) [inline]`

Clearing format flags.

Parameters

mask The flags to unset.

This function clears *mask* in the format flags.

Definition at line 609 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

5.503.5.15 `streamsize std::ios_base::width () const [inline]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 643 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

5.503.5.16 streamsize std::ios_base::width (streamsize __*wide*) [inline]

Changing flags.

Parameters

wide The new width value.

Returns

The previous value of [width\(\)](#).

Definition at line 652 of file ios_base.h.

5.503.5.17 static int std::ios_base::xalloc () throw () [static]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

5.503.6 Member Data Documentation**5.503.6.1** const fmtflags std::ios_base::adjustfield [static]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 309 of file ios_base.h.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

5.503.6.2 const openmode std::ios_base::app [static]

Seek to end before each write.

Definition at line 363 of file ios_base.h.

5.503.6.3 const openmode std::ios_base::ate [static]

Open and seek to end immediately after opening.

Definition at line 366 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.503.6.4 const iostate std::ios_base::badbit [static]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 333 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_istream< _CharT, _Traits >::unget().

5.503.6.5 const fmtflags std::ios_base::basefield [static]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 312 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.503.6.6 const seekdir std::ios_base::beg [static]

Request a seek relative to the beginning of the stream.

Definition at line 395 of file ios_base.h.

5.503.6.7 const openmode std::ios_base::binary [static]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see ///

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 371 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

5.503.6.8 const fmtflags std::ios_base::boolalpha [static]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 257 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), and std::num_put< _CharT, _OutIter >::do_put().

5.503.6.9 const seekdir std::ios_base::cur [static]

Request a seek relative to the current position within the sequence.

Definition at line 398 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

5.503.6.10 const fmtflags std::ios_base::dec [static]

Converts integer input or generates integer output in decimal base.

Definition at line 260 of file ios_base.h.

5.503.6.11 const seekdir std::ios_base::end [static]

Request a seek relative to the current end of the sequence.

Definition at line 401 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

5.503.6.12 const iostate std::ios_base::eofbit [static]

Indicates that an input operation reached the end of an input sequence.

Definition at line 336 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter

>::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), and std::ws().

5.503.6.13 `const iostate std::ios_base::failbit` **[static]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 341 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), and std::basic_ostream< _CharT, _Traits >::seekp().

5.503.6.14 `const fmtflags std::ios_base::fixed` **[static]**

Generate floating-point output in fixed-point notation.

Definition at line 263 of file ios_base.h.

5.503.6.15 `const fmtflags std::ios_base::floatfield` **[static]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 315 of file ios_base.h.

5.503.6.16 `const iostate std::ios_base::goodbit` **[static]**

Indicates all is well.

Definition at line 344 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),

std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ios< _CharT, _Traits >::init(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

5.503.6.17 const fmtflags std::ios_base::hex [static]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 266 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::basic_ostream< _CharT, _Traits >::operator<<().

5.503.6.18 const openmode std::ios_base::in [static]

Open for input. Default for ifstream and fstream.

Definition at line 374 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::seekg(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::underflow().

5.503.6.19 const fmtflags std::ios_base::internal [static]

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 271 of file ios_base.h.

5.503.6.20 const fmtflags std::ios_base::left [static]

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 275 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put().

5.503.6.21 `const fmtflags std::ios_base::oct [static]`

Converts integer input or generates integer output in octal base.

Definition at line 278 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::operator<<()`.

5.503.6.22 `const openmode std::ios_base::out [static]`

Open for output. Default for `ofstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

5.503.6.23 `const fmtflags std::ios_base::right [static]`

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 282 of file `ios_base.h`.

5.503.6.24 `const fmtflags std::ios_base::scientific [static]`

Generates floating-point output in scientific notation.

Definition at line 285 of file `ios_base.h`.

5.503.6.25 `const fmtflags std::ios_base::showbase [static]`

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 289 of file `ios_base.h`.

5.503.6.26 `const fmtflags std::ios_base::showpoint [static]`

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 293 of file `ios_base.h`.

5.503.6.27 `const fmtflags std::ios_base::showpos [static]`

Generates a + sign in non-negative generated numeric output.

Definition at line 296 of file `ios_base.h`.

5.503.6.28 `const fmtflags std::ios_base::skipws` `[static]`

Skips leading white space before certain input operations.

Definition at line 299 of file `ios_base.h`.

5.503.6.29 `const openmode std::ios_base::trunc` `[static]`

Open for input. Default for `ofstream`.

Definition at line 380 of file `ios_base.h`.

5.503.6.30 `const fmtflags std::ios_base::unitbuf` `[static]`

Flushes output after each output operation.

Definition at line 302 of file `ios_base.h`.

5.503.6.31 `const fmtflags std::ios_base::uppercase` `[static]`

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 306 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`.

std::istreambuf_iterator< _CharT, _Traits >::traits_type`

Public typedefs.

Definition at line 59 of file streambuf_iterator.h.

5.526.2.10 `typedef _CharT std::iterator< input_iterator_tag , _CharT
, _Traits::off_type , _CharT * , _CharT & >::value_type
[inherited]`

The type "pointed to" by the iterator.

Definition at line 122 of file stl_iterator_base_types.h.

5.526.3 Constructor & Destructor Documentation

5.526.3.1 `template<typename _CharT , typename _Traits >
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (
) throw () [inline]`

Construct end of input stream iterator.

Definition at line 96 of file streambuf_iterator.h.

5.526.3.2 `template<typename _CharT, typename _Traits >
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (
istream_type & __s) throw () [inline]`

Construct start of input stream iterator.

Definition at line 100 of file streambuf_iterator.h.

5.526.3.3 `template<typename _CharT, typename _Traits >
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (
streambuf_type * __s) throw () [inline]`

Construct start of streambuf iterator.

Definition at line 104 of file streambuf_iterator.h.

5.526.4 Member Function Documentation

5.526.4.1 `template<typename _CharT, typename _Traits > bool
std::istreambuf_iterator< _CharT, _Traits >::equal (const
istreambuf_iterator< _CharT, _Traits > & __b) const [inline]`

Return true both iterators are end or both are not end.

Definition at line 160 of file streambuf_iterator.h.

5.526.4.2 `template<typename _CharT, typename _Traits > char_type
std::istreambuf_iterator< _CharT, _Traits >::operator* () const
[inline]`

Return the current character pointed to by iterator. This returns `/// streambuf.sgetc()`. It cannot be assigned. NB: The result of `/// operator*()` on an end of stream is undefined.

Definition at line 111 of file streambuf_iterator.h.

5.526.4.3 `template<typename _CharT, typename _Traits >
istreambuf_iterator std::istreambuf_iterator< _CharT, _Traits
>::operator++ (int) [inline]`

Advance the iterator. Calls `streambuf.sbumpc()`.

Definition at line 140 of file streambuf_iterator.h.

References `std::basic_streambuf< _CharT, _Traits >::sbumpc()`.

5.527.1 Detailed Description

```
template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t,
typename _Pointer = _Tp*, typename _Reference = _Tp&> struct std::iterator<
_Category, _Tp, _Distance, _Pointer, _Reference >
```

Common iterator class. This class does nothing but define nested typedefs. Iterator classes can inherit from this class to save some work. The typedefs are then used in specializations and overloading.

In particular, there are no default implementations of requirements such as `operator++` and the like. (How could there be?)

Definition at line 117 of file `stl_iterator_base_types.h`.

5.527.2 Member Typedef Documentation

5.527.2.1 `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Distance std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::difference_type`

Distance between iterators is represented as this type.

Reimplemented in [std::reverse_iterator< _Iterator >](#).

Definition at line 124 of file `stl_iterator_base_types.h`.

5.527.2.2 `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Category std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::iterator_category`

One of the [tag types](#).

Definition at line 120 of file `stl_iterator_base_types.h`.

5.527.2.3 `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Pointer std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::pointer`

This type represents a pointer-to-value_type.

Reimplemented in [std::reverse_iterator< _Iterator >](#).

Definition at line 126 of file `stl_iterator_base_types.h`.

5.527.2.4 `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Reference std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>::reference`

This type represents a reference-to-value_type.

Reimplemented in [std::reverse_iterator<_Iterator>](#).

Definition at line 128 of file `stl_iterator_base_types.h`.

5.527.2.5 `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Tp std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>::value_type`

The type "pointed to" by the iterator.

Definition at line 122 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

5.533.1 Detailed Description

template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> class [std::linear_congruential_engine](#)< _UIntType, __a, __c, __m >

A model of a linear congruential random number generator. A random number generator that produces pseudorandom numbers via linear function:

$$x_{i+1} \leftarrow (ax_i + c) \bmod m$$

The template parameter `_UIntType` must be an unsigned integral type large enough to store values up to `(__m-1)`. If the template parameter `__m` is 0, the modulus `__m` used is [std::numeric_limits<_UIntType>::max\(\)](#) plus 1. Otherwise, the template parameters `__a` and `__c` must be less than `__m`.

The size of the state is 1.

Definition at line 160 of file random.h.

5.533.2 Member Typedef Documentation

5.533.2.1 `template<typename _UIntType, _UIntType __a,
_UIntType __c, _UIntType __m> typedef _UIntType
std::linear_congruential_engine< _UIntType, __a, __c, __m
>::result_type`

The type of the generated random value.

Definition at line 169 of file random.h.

5.533.3 Constructor & Destructor Documentation

5.533.3.1 `template<typename _UIntType, _UIntType __a, _UIntType __c,
_UIntType __m> std::linear_congruential_engine< _UIntType,
__a, __c, __m >::linear_congruential_engine (result_type __s =
default_seed) [inline, explicit]`

Constructs a linear_congruential_engine random number generator engine with seed __s. The default seed value is 1.

Parameters

__s The initial seed value.

Definition at line 187 of file random.h.

References std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

5.533.3.2 `template<typename _UIntType, _UIntType __a, _UIntType
__c, _UIntType __m> template<typename _Sseq, typename =
typename std::enable_if<!std::is_same<_Sseq, linear_congruential_
engine>::value> ::type> std::linear_congruential_engine<
_UIntType, __a, __c, __m >::linear_congruential_engine (_Sseq &
__q) [inline, explicit]`

Constructs a linear_congruential_engine random number generator engine seeded from the seed sequence __q.

Parameters

__q the seed sequence.

Definition at line 200 of file random.h.

References `std::linear_congruential_engine<_UIntType, __a, __c, __m>::seed()`.

5.533.4 Member Function Documentation

5.533.4.1 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> void std::linear_congruential_engine<_UIntType, __a, __c, __m>::discard (unsigned long long __z) [inline]`

Discard a sequence of random numbers.

Todo

Look for a faster way to do discard.

Definition at line 250 of file random.h.

5.533.4.2 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> result_type std::linear_congruential_engine<_UIntType, __a, __c, __m>::max () const [inline]`

Gets the largest possible value in the output range.

Todo

This should be constexpr.

Definition at line 241 of file random.h.

5.533.4.3 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> result_type std::linear_congruential_engine<_UIntType, __a, __c, __m>::min () const [inline]`

Gets the smallest possible value in the output range.

The minimum depends on the `__c` parameter: if it is zero, the minimum generated must be > 0 , otherwise 0 is allowed.

Todo

This should be constexpr.

Definition at line 232 of file random.h.

5.533.4.4 `template<typename _UIntType, _UIntType __a, _UIntType __c,
 _UIntType __m> result_type std::linear_congruential_engine<
 _UIntType, __a, __c, __m >::operator() () [inline]`

Gets the next random number in the sequence.

Definition at line 260 of file random.h.

5.533.4.5 `template<typename _UIntType , _UIntType __a, _UIntType
 __c, _UIntType __m> template<typename _Sseq >
 std::enable_if< std::is_class< _Sseq >::value >::type
 std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed (
 _Sseq & __q)`

Reseeds the linear_congruential_engine random number generator engine sequence using values from the seed sequence __q.

Parameters

__q the seed sequence.

Seeds the LCR engine with a value generated by __q.

Definition at line 145 of file random.tcc.

References std::__lg(), and std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

5.533.4.6 `template<typename _UIntType , _UIntType __a, _UIntType __c,
 _UIntType __m> void std::linear_congruential_engine< _UIntType,
 __a, __c, __m >::seed (result_type __s = default_seed)`

Reseeds the linear_congruential_engine random number generator engine sequence to the seed __s.

Parameters

__s The new seed.

Seeds the LCR with integral value __s, adjusted so that the ring identity is never a member of the convergence set.

Definition at line 129 of file random.tcc.

Referenced by std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine(), and std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

5.533.5 Friends And Related Function Documentation

5.533.5.1 `template<typename _UIntType, _UIntType __a, _UIntType __c,
_UIntType __m> template<typename _UIntType1, _UIntType1
__a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT
, typename _Traits > std::basic_ostream<_CharT, _Traits>&
operator<< (std::basic_ostream<_CharT, _Traits> &, const
std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1 > &
) [friend]`

Writes the textual representation of the state $x(i)$ of x to `__os`.

Parameters

`__os` The output stream.

`__lcr` A % [linear_congruential_engine](#) random number generator.

Returns

`__os`.

5.533.5.2 `template<typename _UIntType, _UIntType __a,
_UIntType __c, _UIntType __m> bool operator==(const
linear_congruential_engine<_UIntType, __a, __c, __m> & __lhs,
const linear_congruential_engine<_UIntType, __a, __c, __m> &
__rhs) [friend]`

Compares two linear congruential random number generator objects of the same type for equality.

Parameters

`__lhs` A linear congruential random number generator object.

`__rhs` Another linear congruential random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 278 of file random.h.

5.533.5.3 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _UIntType1, _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream<_CharT, _Traits > &, std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > &) [friend]`

Sets the state of the engine by reading its textual representation from `__is`.

The textual representation must have been previously written using an output stream whose imbued locale and whose type's template specialization arguments `_CharT` and `_Traits` were the same as those of `__is`.

Parameters

`__is` The input stream.

`__lcr` A % [linear_congruential_engine](#) random number generator.

Returns

`__is`.

5.533.6 Member Data Documentation

5.533.6.1 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::increment [static]`

An increment.

Definition at line 174 of file random.h.

5.533.6.2 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::modulus [static]`

The modulus.

Definition at line 176 of file random.h.

5.533.6.3 `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> const _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::multiplier [static]`

The multiplier.

Definition at line 172 of file random.h.

5.534.1 Detailed Description

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class
std::list<_Tp, _Alloc >
```

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *doubly linked* list. Traversal up and down the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike [std::vector](#) and [std::deque](#), random-access iterators are not provided, so subscripting (`[]`) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, [std::list](#) provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `list<Tp>`:

First, we never actually allocate a `Tp`, we allocate `List_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `list<X,Alloc1>` are spliced into `list<X,Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Second, a list conceptually represented as

```
A <---> B <---> C <---> D
```

is actually circular; a link exists between `A` and `D`. The list class holds (as its only data member) a private `list::iterator` pointing to `D`, not to `A`! To get to the head of the list, we start at the tail and move forward by one. When this member iterator's `next/previous` pointers refer to itself, the list is empty.

Definition at line 417 of file `stl_list.h`.

5.534.2 Constructor & Destructor Documentation

```
5.534.2.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc >::list ( ) [inline]
```

Default constructor creates no elements.

Definition at line 500 of file `stl_list.h`.

5.534.2.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (const allocator_type & __a)
[inline, explicit]`

Creates a list with no elements.

Parameters

a An allocator object.

Definition at line 508 of file stl_list.h.

5.534.2.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (size_type __n) [inline,
explicit]`

Creates a list with default constructed elements.

Parameters

n The number of elements to initially create.

This constructor fills the list with *n* default constructed elements.

Definition at line 520 of file stl_list.h.

5.534.2.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (size_type __n, const value_type &
__value, const allocator_type & __a = allocator_type())
[inline]`

Creates a list with copies of an exemplar element.

Parameters

n The number of elements to initially create.

value An element to copy.

a An allocator object.

This constructor fills the list with *n* copies of *value*.

Definition at line 532 of file stl_list.h.

5.534.2.5 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (const list<_Tp, _Alloc> & __x)
[inline]`

List copy constructor.

Parameters

x A list of identical element and allocator types.

The newly-created list uses a copy of the allocation object used by *x*.

Definition at line 559 of file `stl_list.h`.

References `std::list<_Tp, _Alloc>::begin()`, and `std::list<_Tp, _Alloc>::end()`.

5.534.2.6 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (list<_Tp, _Alloc> && __x)
[inline]`

List move constructor.

Parameters

x A list of identical element and allocator types.

The newly-created list contains the exact contents of *x*. The contents of *x* are a valid, but unspecified list.

Definition at line 571 of file `stl_list.h`.

5.534.2.7 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::list<_Tp, _Alloc>::list (initializer_list<value_type> & __l,
const allocator_type & __a = allocator_type()) [inline]`

Builds a list from an [initializer_list](#).

Parameters

l An [initializer_list](#) of `value_type`.

a An allocator object.

Create a list consisting of copies of the elements in the [initializer_list](#) *l*. This is linear in `l.size()`.

Definition at line 582 of file `stl_list.h`.

5.534.2.8 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 template<typename _InputIterator > std::list< _Tp, _Alloc >::list (
 _InputIterator __first, _InputIterator __last, const allocator_type &
 __a = allocator_type()) [inline]`

Builds a list from a range.

Parameters

first An input iterator.

last An input iterator.

a An allocator object.

Create a list consisting of copies of the elements from *[first,last)*. This is linear in N (where N is distance(*first,last*)).

Definition at line 599 of file stl_list.h.

5.534.3 Member Function Documentation

5.534.3.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 template<typename... _Args> _Node* std::list< _Tp, _Alloc
 >::_M_create_node (_Args &&... __args) [inline,
 protected]`

Parameters

x An instance of user data.

Allocates space for a new node and constructs a copy of *x* in it.

Definition at line 477 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::emplace(), and std::list< _Tp, _Alloc >::insert().

5.534.3.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::list< _Tp, _Alloc >::assign (size_type __n, const
 value_type & __val) [inline]`

Assigns a given value to a list.

Parameters

n Number of elements to be assigned.

val Value to be assigned.

This function fills a list with n copies of the given value. Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 670 of file `stl_list.h`.

```
5.534.3.3  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
            template<typename _InputIterator > void std::list<_Tp, _Alloc
            >::assign ( _InputIterator __first, _InputIterator __last )
            [inline]
```

Assigns a range to a list.

Parameters

first An input iterator.

last An input iterator.

This function fills a list with copies of the elements in the range $[first, last)$.

Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 687 of file `stl_list.h`.

```
5.534.3.4  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
            void std::list<_Tp, _Alloc >::assign ( initializer_list< value_type >
            __l ) [inline]
```

Assigns an [initializer_list](#) to a list.

Parameters

l An [initializer_list](#) of `value_type`.

Replace the contents of the list with copies of the elements in the [initializer_list](#) *l*. This is linear in `l.size()`.

Definition at line 703 of file `stl_list.h`.

References `std::list<_Tp, _Alloc >::assign()`.

Referenced by `std::list<_Tp, _Alloc >::assign()`.

```
5.534.3.5  template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
            reference std::list<_Tp, _Alloc >::back ( ) [inline]
```

Returns a read/write reference to the data at the last element of the list.

Definition at line 903 of file stl_list.h.

References std::end().

5.534.3.6 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::list<_Tp, _Alloc>::back () const [inline]`

Returns a read-only (constant) reference to the data at the last element of the list.

Definition at line 915 of file stl_list.h.

References std::end().

5.534.3.7 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::list<_Tp, _Alloc>::begin () [inline]`

Returns a read/write iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 718 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::list(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::operator=(), std::operator==(), std::list< _Tp, _Alloc >::remove_if(), std::list< _Tp, _Alloc >::resize(), std::list< _Tp, _Alloc >::sort(), std::list< _Tp, _Alloc >::splice(), and std::list< _Tp, _Alloc >::unique().

5.534.3.8 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::list<_Tp, _Alloc>::begin () const [inline]`

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 727 of file stl_list.h.

5.534.3.9 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::list<_Tp, _Alloc>::cbegin () const [inline]`

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 791 of file stl_list.h.

5.534.3.10 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::list< _Tp, _Alloc >::cend () const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 800 of file `stl_list.h`.

5.534.3.11 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::list< _Tp, _Alloc >::clear () [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1182 of file `stl_list.h`.

5.534.3.12 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::list< _Tp, _Alloc >::crbegin () const
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 809 of file `stl_list.h`.

References `std::end()`.

5.534.3.13 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::list< _Tp, _Alloc >::crend () const
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 818 of file `stl_list.h`.

References `std::begin()`.

5.534.3.14 `template<typename _Tp , typename _Alloc > template<typename...
_Args> list< _Tp, _Alloc >::iterator list::emplace (iterator
__position, _Args &&... __args)`

Constructs object in list before specified iterator.

Parameters

position A const_iterator into the list.

args Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 87 of file list.tcc.

References std::list< _Tp, _Alloc >::_M_create_node().

5.534.3.15 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
bool std::list< _Tp, _Alloc >::empty () const [inline]`

Returns true if the list is empty. (Thus [begin\(\)](#) would equal [end\(\)](#).)

Definition at line 828 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::sort(), and std::list< _Tp, _Alloc >::splice().

5.534.3.16 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::list< _Tp, _Alloc >::end () [inline]`

Returns a read/write iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 736 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::list(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::operator=(), std::list< _Tp, _Alloc >::operator==(), std::list< _Tp, _Alloc >::remove_if(), std::list< _Tp, _Alloc >::resize(), std::list< _Tp, _Alloc >::splice(), and std::list< _Tp, _Alloc >::unique().

5.534.3.17 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::list< _Tp, _Alloc >::end () const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 745 of file stl_list.h.

5.534.3.18 `template<typename _Tp, typename _Alloc> list< _Tp, _Alloc>::iterator list::erase (iterator __position)`

Remove element at given position.

Parameters

position Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the list by one.

Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 108 of file `list.tcc`.

Referenced by `std::list< _Tp, _Alloc>::operator=()`, and `std::list< _Tp, _Alloc>::resize()`.

5.534.3.19 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc>::erase (iterator __first, iterator __last) [inline]`

Remove a range of elements.

Parameters

first Iterator pointing to the first element to be erased.

last Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range `[first,last)` and shorten the list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

5.534.3.20 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::list< _Tp, _Alloc >::front () [inline]`

Returns a read/write reference to the data at the first element of the list.

Definition at line 887 of file stl_list.h.

References std::begin().

5.534.3.21 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::list< _Tp, _Alloc >::front () const
[inline]`

Returns a read-only (constant) reference to the data at the first element of the list.

Definition at line 895 of file stl_list.h.

References std::begin().

5.534.3.22 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
allocator_type std::list< _Tp, _Alloc >::get_allocator () const
[inline]`

Get a copy of the memory allocation object.

Reimplemented from [std::List_base< _Tp, _Alloc >](#).

Definition at line 709 of file stl_list.h.

5.534.3.23 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::list< _Tp, _Alloc >::insert (iterator __position,
value_type && __x) [inline]`

Inserts given rvalue into list before specified iterator.

Parameters

position An iterator into the list.

x Data to be inserted.

Returns

An iterator that points to the inserted data.
